The Medical Roundup

by Walter Adams, Emeritus Consultant in Medicine, Mayo Clinic; Emeritus Professor of Medicine, Mayo Foundation.

THE PATIENT WHO CANNOT TALK

One of the most horrible things that can happen to a patient with bulbar poliomyelitis is to lose his ability to talk.

duced in certain glands near the mouth of the fly, is needed to change the larvae, or little worms, into the adult flying animal. Flies which lack this growing-up hormone develop large abdominal pigmented masses of cells which resemble the black centers, called melanomas, of man and white horses.

In this column I often remark upon the fact that we in science never know from day to day whence may come a most helpful idea. To illustrate what I mean; Dr. C. H. Haddox, Jr., of the Louisiana State University Medical School, New Orleans, recently commented on the "growing up hormone" of the tiny fruit fly. This hormone, which is pro-
