The Medical Roundup

by *Walter Wilcox*
Emeritus Consultant in Medicine, Mayo Clinic
Emeritus Professor of Medicine, Mayo Foundation

When a Child Swallows a Marble

A woman whose 5-year-old son the other day choked on a marble wonders what she should have done to help him. All she could think of was to turn him upside down and hit him on his back. Fortunately, the boy swallowed the marble, but another child she knows choked to death on a large lump of food. For authoritative information, I turned to Dr. Paul H. Hollinger, of Chicago, who is an expert in getting things out of children's air passages and the lungs.

Smallpox Appears

Years ago in Southern California, a man got a very severe backache, so bad that he entered a little hospital run by an irregular practitioner. After a few days of the terrible backache, he broke out with a malignant type of smallpox with black pustules all over his body. As a result, if I remember correctly, the practitioner, the sanatorium cook, and a number of people around the place came down with a severe form of smallpox and several died.

Dr. Alvarez

When a child swallows a marble, a disease often called "the Devil's grip," and it surely feels like that! In some cases, the virus affects the pleura which lines the chest cavity and it may involve the sac in which the heart lies.

A few months ago I was reminded of this case when in came a previously perfectly healthy young woman with a severe low backache—the first she had ever had. The pain was so bad that for several nights she could hardly sleep. Aspirin could not touch it. What was the cause? Apparently, an unusually severe reaction to the vaccination against smallpox which she had had a week before the pain came. The "storm" soon quieted down and the woman has had no trouble since.

Dr. Alvarez hopes his readers will understand that it would be impossible for him to answer requests for information or to attempt to diagnose by mail.

(Released by The Register and Tribune Syndicate, 1957)

About 37 million are enrolled in U. S. schools and colleges.

Keep Objects Away

One of the important things that parents of small children can do is to try to keep from them objects which they can get into their windpipe. Often, I've had the creeps as I have watched a mother give her little child peanuts, an almond, a bean, or an olive with a pit in it.

One of the worst things that women do is to give their baby a button basket to play with; this is just asking for terrible trouble. It's a marvel to me that the infants who are constantly putting things in their mouths ever survive! The infant, if left alone with an olive, might get by all right, but when his brother hits him or tumbles onto him, down the windpipe it can go.

People should know that in every large medical center there are men who are expert in looking into the windpipe or the gullet with a lighted tube. They are expert in fishing out foreign bodies. They have to have special forceps with which to get hold of rounded bodies, like peanuts or marbles. They have a special apparatus to close safety-pins.

Commonly, an infant will swallow an open safety-pin and this must be closed before it can be gotten out. When something is stuck in the windpipe or gullet the quicker an expert gets at it the better. After a while, the lining of the tube becomes so swollen that it is much harder to get at the thing and to get hold of it, if a child is strangling for air, a doctor at the nearest hospital can cut into the windpipe and save life.

Causes of Severe Backache

Many a person with an acute backache asks me what is wrong, and I cannot tell from a distance. I might not be able to tell if I could examine him with care. Many a person with a bad back wonders why x-ray films of the spine show no sign of disease. Also, an expert orthopedist, when called in, may examine the back and he may see nothing wrong. Then, if, as often happens, after a while the backache goes — with or without some manipulation or physiotherapy — the chances are it was an episode in a life-long tendency to arthritis or fibrositis.

But, says the patient, "Why did it come upon me at that particular time?" I suspect that often an acute backache, if not brought on by lifting or getting a crick, is due to an infection with a virus. I know I once got a terrible and paralyzing attack of lumbago due to the polio-like Coxsackie virus. This produces
