The Medical Roundup

by Walter Alvarez

Emeritus Consultant in Medicine, Mayo Clinic
Emeritus Professor of Medicine, Mayo Foundation

Miscarriages

A woman who had three successive miscarriages, all in the third month, wonders what she can do to avoid this and get a living child. Doubtless, her obstetrician is doing everything he can to find out what is the trouble and what can be done to stop the abnormal contractions of the womb. Now, an ovarian hormone, Relaxin, has been found to quiet the womb and, some day, when enough of it is made available, it may help thousands of these women who have been losing their babies.

Dr Alvarez

Glaucoma

One of the comman causes of blindness is glaucoma. In this disease, something goes wrong in the mechanism by which fluid enters and leaves the eye-ball. If more fluid goes in than comes out, the tension in the eye-ball must increase, and this puts dangerous pressure on the blood vessels that supply the retina or seeing-part of the eye. With great pressure the blood cannot pass. If the patients neglects pain in one or both eyes, together perhaps with colored haloes around objects seen, he is likely to lose his sight. If he goes quickly to an ophthalmologist (eye doctor) and gets drops to put in every day, or if he has a little operation performed on the eye, or if he takes a drug called Diamox, which helps in the excretion of water from his body, he may preserve his sight for many years.

Contraction Of The Hand

Many people get a contraction in the tough tissue under the skin of the palm of the hand—a contraction that pulls in the little finger and the ring finger. A surgeon can dissect out the band of contracted tissue and give relief.

Dr. Alvarez hopes his readers will understand that it would be impossible for him to answer requests for information or to attempt to diagnose by mail.
