

Mysterious Eyes In Television Set Removed by Police
 Hasbrouck Heights, N.J.— "There is some kind of animal in my TV set. I can see eyes," a frantic housewife telephoned police Thursday.
 Police arrived at the home of Mrs. Alice Robol and began examining her television set.
 They rattled and shook the set and a squirrel scampered across the floor toward Mrs. Robol's front door being held open by police.

Robin Hood Festival Slated at Sherwood
 Sherwood, Ore. — This Willamette valley town took on the look of an English village at jousting time today as it readied itself for the 1957 Robin Hood Festival next week end.
 Highlight of the annual event will be an archery competition Friday between Oregon archers and bowmen in Nottingham, England. British Consul James McDonald will be honorary judge of the contest at Sherwood which currently holds the silver trophy bowl awarded to the top scoring team.
 Ann Magi, 17, of Tigard, a refugee from Estonia, will rule over the festival as Maid Marian.
 The Illinois Institute of Technology, (Chicago), formed by the merger of Armour Tech and Lewis Institute, now claims the largest engineering enrollment in the country.

Radiological Warfare Practical, Government Handbook Points Out

By JOSEPH L. MYLER
 United Press Correspondent
 Washington — The government said today that radiological warfare is now practical. Indeed, it would be "an automatic extension" of war waged with the big nuclear weapons in the U.S., Russian and British arsenals.
 To the million wiped out by H-bomb blast, heat, and initial radiation would be added millions killed or injured by radioactive fallout far from target centers.
 The inevitability of radiological disaster in event of all-out atomic war is one of many grim facts reported in "The Effects of Nuclear Weapons," a new handbook published today by the Defense Department and Atomic Energy Commission.
 The book inferentially casts doubt on the wisdom of attempting to evacuate prospective target cities. At the same time it makes it clear that no practical shelter can be built that would be proof against all kinds of nuclear attack.
The Threat
 But as for contamination of the world with bomb-produced strontium-90, a dangerous and long-lasting fission product which can cause bone cancer and perhaps leukemia, it says:
 "If H-bomb tests are continued at the same rate as in the past, the worldwide biological effects of strontium-90 will not be detectable."

Calculations "based on somewhat uncertain premises" suggest that in war, fission debris "from many thousands of megatons of fission would have to be added to the stratosphere before" more than a "safe" amount was concentrated in human beings.
 Nowhere in the book is there any mention of the "absolutely clean" H-bomb, the theoretical possibility of which was first publicized a month after the book was finished.
 The book's premise is that, in

war, "the efforts of an enemy would be devoted to cause the maximum destruction and casualties," a premise implying use of radioactivity "dirty" weapons.
 The new publication is the successor of "The Effects of Atomic Weapons" issued in 1950 more than two years before the world's first H-bomb explosion.
The Difference
 For the first time it details officially, on one 579-page document, some of the differences between the "small" bombs which destroyed Hiroshima and Nagasaki and the giants now available.
 The "small" bomb was equal in violence to 20 kilotons (20,000 tons of TNT). The new book estimates the destructive range of weapons up to 20 megatons—20 million tons and beyond.
 In a foreword, however, Defense Secretary Charles E. Wilson and AEC Chairman Lewis L. Strauss emphasize that "the figure of 20 megatons is not to be taken as an indication of capabilities of developments." The largest U.S. weapon ever detonated, according to official sources, was the 15 megaton bomb tested at Bikini March 1, 1954.
 The book is packed with information of use to Civil Defense about the different effects of weapons of different size exploded in different ways — i.e., in the air, on the surface, or below the surface of sea or land.
 From it can be gleaned the fact that the 1954 Bikini bomb's radioactivity, one minute after detonation, was equal to one billion tons of radium. By comparison a one-kiloton bomb, like some of those tested in Nevada, is equivalent to 100,000 tons of radium.

La Grande Man To Head Aeronautics Board; Work Told

Salem — Dr. William M. Peare of La Grande Thursday was elected chairman of the Oregon State Board of Aeronautics.
 Dr. Peare, a member of the board for 16 years, succeeds Ralph Scroggins as chairman.
 The board, at its meeting Thursday, named nine airports on which seal coating will be applied to runways under a project authorized by the recent Legislature. The board will buy the materials for the seal coating and local municipalities will provide equipment and labor.
 The nine airports are at La Grande, Baker, Pendleton, Ontario, Burns, Lakeview, Corvallis, Eugene and Salem.
Mat Due at Lapine
 A bid was accepted from Babler Bros., Inc., Portland, to lay an oil mat on the landing strip at Lapine. But the board rejected as too high the only bid for installing lighting at the Cascade Locks landing strip.
 A request from the city of Newport for engineering help in maintenance work at the Newport airport was approved. Engineering help will be given to Seaside in constructing a new airport.
 Peare and Earl Snyder, state aeronautics director, will attend the convention of the National Flying Club at Denver later this month.

Portland — The supervisor of Mount Hood National Forest today announced partial closure of the area to public entry, effective at midnight tonight.
 Supervisor Lloyd Olson said the closed areas were mostly those of unabated logging slash and that travel and fishing corridors would be left open. Persons with legitimate business in the closed areas may obtain entry permits.
 Olson reported Hood forests getting progressively dryer and four fires have been reported there so far this year. Last year there were 36 man-caused blazes.

Portion of Mt. Hood Forest To Be Closed

Portland — The supervisor of Mount Hood National Forest today announced partial closure of the area to public entry, effective at midnight tonight.
 Supervisor Lloyd Olson said the closed areas were mostly those of unabated logging slash and that travel and fishing corridors would be left open. Persons with legitimate business in the closed areas may obtain entry permits.
 Olson reported Hood forests getting progressively dryer and four fires have been reported there so far this year. Last year there were 36 man-caused blazes.

Miss Portland Chosen For Pageant at Seaside
 Portland — Nancy Wenman, a Grant high school graduate, Thursday night was chosen Miss Portland to represent the city in the Miss Oregon pageant at Seaside later this month.

Tillamook Dairyman Apointed by Holmes

Salem — Hans Leuthold, 42, a Tillamook dairy industry leader, was appointed today by Gov. Robert D. Holmes to the Dairy Products Commission.
 Leuthold, a past president of the Oregon Dairywomen's Association and northwest regional grassman of the year in 1956, succeeds John Gienger, also of Tillamook.
 The governor also announced the re-appointment of George Hostetter, Redmond, and Lyle Hammaack, Portland, to the seven-member commission which is charged with promotion of the state's dairy industry. All three are for three-year terms expiring June 30, 1960.

This Foolish World in Need of Fools; So Sam Levenson Justifies Existence

BY SAM LEVENSON
 Written for United Press
 New York — "Somebody once said that a man without a sense of humor is capable of the worst villainy.
 I don't know who said it. It might even have been me. I believe that the ability to laugh is a pain-releiver that was around before aspirin and will probably survive the atom bomb. Perhaps even the tranquilizers.
 People often ask me why I laugh at my own jokes. I really don't laugh at laughter. When I see people laugh it makes me happy, so I laugh. As the proverb says: "I had rather have a fool to make me merry than experience to make me sad." I don't know who said that either, but this time I know it wasn't me.
World Needs Fools
 Perhaps I have just called myself a fool, but this foolish world

needs fools. There, so now I have justified my existence.
 Man is the only animal that can laugh. And he probably has the least reason to do so. Animals feel fear, hunger, joy, love — in fact, they feel everything but ridiculous. If they could laugh out loud, they probably would laugh at man. This would give them a feeling of superiority and they would probably organize and refuse to work for us.
 This feeling of superiority is the one thing above all else that I try to avoid in my laughter. I never tell jokes aimed, however subtly, at physical defects, mental illness, or racial or religious slurs. I don't believe that God gave us this gift of laughter to be used as an instrument of oppression.
Laughs At Self
 Sometimes I laugh (and this is indeed foolish) because the gift I offered was not accepted —

the audience did not laugh. I laugh because this is a funny situation. Here am I handling a guy a present and he doesn't want it. This is silly I now find myself laughing at myself. This, too, is healthy. Since I am only human I can be just as ridiculous as the next fellow and heaven has reminded me of this in a gentle manner.
 There is always a danger when writing about laughter to become very analytical and unfunny, so I'd better quit while I'm ahead (if I am).
 I'd rather wind up on this note. It is a prayer inscribed in the Chester Cathedral in England:
 "Give me a sense of humor, lord, Give me the grace to see a joke, To get some happiness from life, And pass it on to other folk."
