**Sore,
aching
muscles?**

Here's quick relief when weekend workout makes muscles cry for help—

You'll get soothing relief when you massage Absorbine Jr. into your skin.

You feel a warm glow when you rub Absorbine Jr. on painful areas. And because it stimulates local circulation, it helps counter the pressure that makes muscles throb and ache. Soothes irritated nerve endings.

Absorbine Jr. is famous for the wonderful relief it has given hundreds of sufferers. (Letters in our files tell us so.)

Buy Absorbine Jr. today. Not greasy, not sticky, it rubs in all the way! Guaranteed satisfaction or money will be refunded.

They Sail on Air

Three Lions Photo
A glider is a sort of sailboat of air, gliding fast like birds through silent skies, alone with nature in an age of machines.

The ~~glider~~ ~~motor~~ is shattered, the heat barrier is bending, but some pilots are still flying in the opposite direction—back to the slow, pure flight of ~~motorless~~ gliders. Sailing on air, they call it, because the glider—or sailplane—is to the airplane what the sailboat is to the motorboat. Each depends on nature alone—plus the pilot's skill—to stay afloat and move through air or water. Gliders soar aloft on rising air currents, sometimes as high as 40,000 feet and as far as 500 miles, without ever running out of gas or losing a propeller.

Glider lands on skid and single wheel. In nose are air tube for speedometer and hook for tow rope.

Motorless ship uses tow plane for initial momentum. Once it gains altitude, the glider cuts self loose.

Simpler method is power winch. Glider is hauled into air at end of 250 feet of cable.
