The Medical Roundup

by *Walter Alvarez*

Table Salt and High Blood Pressure

Recently, in Japan, investigators have found signs of a

table salt in the diet of the people in a district and their average blood pressure; the more salt they use the higher their blood pressures. I was just reading a recent article by Drs. L. K. Dahl and R. A. Love of Upton, N.Y., in which they studied the salt-eating habits of 1,346 adults in relation to their blood pressure.

As we all know, there are persons who salt an egg, but nothing else, and then there are persons who, when their food is set before them, immediately shake much salt over everything. Drs. Dahl and Love found that, of the 581 heavy salters, 61 had high blood pressure. Of the 630 with average salt intake, there were 43 with high blood pressure. All those persons with a beginning hypertension who are anxious to do something about it might try eating their food as it comes from the kitchen.

Sclerosis Vaccine for Multiple

I have received letters from persons suffering from multiple sclerosis — asking about the Russian vaccine. Some accused our government of chauvinism and maliciousness in not quickly licensing the vaccine for distribution in this country but they were wrong.

As I wrote these people, it is the business of a division of our Government to protect us from the premature use of medicines that can be harmful, and so the sufferers should be patient, and should wait until this vaccine can be tested. What rumors I have heard from Europe were that the treatment was of doubtful value.

Today, I see that in the British Medical Journal (1:7, 1958) Dr. Dick and his associates have studied the vaccine. Their conclusion is that it contains not a cause of multiple sclerosis, but the virus of rabies (hydrophobia), which is not a good thing to get mixed up with unless one has to. The investigators could not see that the vaccine was curative, and they warned against its use.

Improvement in Mental Hospitals

I recently read an address by Sen. Frank Carlson, in which he discussed the great improvement that Kansas has recently made in its handling of the insane.

As a result of work started about 1947, in 1955, about 80 per cent of the patients who were admitted to mental hospitals each year were being discharged well or improved, within a period of from three to six months. That this can save the state much money can be seen from the fact that in 1956, approximately 186,000 mental patients were admitted. As Senator Carlson said, today some 16,000,000 people in the United States are going to be hospitalized for mental illness. In some states the percentage is one

in 16 of the population.

Senator Carlson went on to say that, because of mental disturbances, industry suffers a \$9,000,000,000 loss each year, partly because of absenteeism from work. Most of the accidents which cause disability occur because the person is psychologically upset at the time. Alcoholism, which is closely related to psychosis, costs industry something over a billion dollars a year. One out of every 50 workers is a problem drinker.

As Dr. Karl Menninger said, in Kansas they certainly needed more mental hospital buildings, but, more than that, they needed trained doctors and nurses and orderlies. What is needed in many states is a more extensive out-patient service for mentally disturbed persons. It is cheaper to take care of them in a clinic than in a hospital.

A Mode of Determining Sex

The world is getting to be a better place, and in the last few months I have received a number of letters from people who, having had born to them an infant of uncertain sex, are now having every possible test made to see if the child is definitely either a boy or a girl. They don't want their child to go through the awful experience of being brought up as a boy, when really it is a girl. These people, with the help of their home physician, got in touch with Drs. Moore and Barr, of Ontario in London, Canada. These men have shown that by examining under the microscope a bit of mucus membrane from the lining of the mouth, they can tell whether the tissue is male or female. In a girl, the nuclei of the cells contain a mass of "sex chromatin" which is absent in the cells of boys. Unfortunately, this test cannot always settle the problem because in rare cases a child with a boy's type of cells will have ovaries in the abdomen.

Dr. Alvarez hopes his readers will understand that it would be impossible for him to answer requests for information or to attempt to diagnose by mail.

(Released by The Register and Tribune Syndicate, 1958)

St. Louis—Five children died and their mother was critically burned this morning when fire spread from an overheated coal stove and destroyed the home.

The size of stars varies considerably from about 3,000 times the size of the sun to about one-tenth its size.

Studebaker Plans '59 Economy Car

South Bend, Ind. — Studebaker-Packard Corporation President Harold E. Churchill announced Thursday S-P will build a new 1959 model economy car.

In his announcement at the annual stockholders meeting, Churchill said S-P will build the kind of car Americans want now—"lower cost, yet well-made transportation that retains the elements of full-size passenger space... economical operating costs, performance of design, higher resale value and consequent lower depreciation rates."

Studebaker-Packard Corporation President Harold E. Churchill announced Thursday S-P will build a new 1959 model economy car.

In his announcement at the annual stockholders meeting, Churchill said S-P will build the kind of car Americans want now—"lower cost, yet well-made transportation that retains the elements of full-size passenger space... economical operating costs, performance of design, higher resale value and consequent lower depreciation rates."
