"Let's talk dry cleaning"

By KEN HARDY

In women's fashions, this is a season of sparkle. Dresses, blouses and evening wraps are resplendent with metallic fabrics. Some dresses and wraps are made entirely of lame. Other fabrics that are favorites are silks, satins, velvets, even wools shot through with metallic threads.

These fabrics are fascinating, but they also present cleaning difficulties. Fabrics containing metal threads have two major faults: they tarnish, and they are extremely susceptible to severe creasing and wrinkling.

Most metal threads consist of a cotton inner thread which serves as a base around which a thin metallic ribbon is rolled spirally. The base metal is usually copper which, when the lacquer wears off, tarnishes badly and tarnish is almost impossible to remove by any method of cleaning. Synthetic metal-like threads do not present this tarnish problem. Before he can safely clean cloth with metal threads woven through it, your cleaner must test to find out if the metal has a copper base or is a synthetic thread.

We always make sure of the fabric content of every article you send us. You can count on our taking a little more painstaking care with the cleaning and finishing of your finest, most delicate fabrics. That's why the best dressed people in town send their dry cleaning to BIG Y CLEANERS, 1928 Table Rock Rd. SP 3-1919. S&H Green Stamps.
