"MOST BRUTAL" DEATH—Ex-movie actress Claire Mar (here shown with Al Jolson in an old file photo) was hacked to death in her bedroom at Carmel, Calif., by a crazed sex sadist. A Carmel sheriff's officer described the killing as the most brutal he had ever seen.

Small Worlds Around Us

By Lynn M. Watkins

Growth Rings Tell Age of Tree and Past Weather

A long time ago it was discovered that age in a tree could be figured almost to the exact date of its very beginning by counting the growth rings in a cross section of the trunk.

The wide bands or rings indicate a season of considerable growth, which results from a period of adequate rainfall and warm weather.

Likewise, if one measures the width of the very thin rings he can accurately determine the severity of a year past winter. Naturally, a tree living in temperate regions only grew during warm weather and remained dormant during the cold winters.

The rings are usually referred to as the cambium layer. This layer is actually the only living part of the trunk. It is the section lying directly under the bark, and is composed of a series of tiny tubes. These tubes, corresponding to veins and arteries in a living animal, carry the life-blood, which in a tree is the sap, to the highest branch and the farthest leaf.
