It was stated that women are now employed in 446 different kinds of jobs and that one-third of all workers are women. The typical woman worker of today is older and better educated than formerly. Many women whose children are grown are returning to school for further education before going back to employment outside the home. It is no longer unusual to find grandmothers attending college.

Women are represented in all professions. The largest number are in education, 75 per cent of all teachers in America are women.

One group of workers which has increased greatly is that of young wives who are helping their husbands finish their education. Many of these, as well as other young working wives are mothers. This has led to the growing vocation of all-day baby sitter.

More and more women are holding public office. The 86th Congress has a record number of 17 women and 123 women have been appointed to key positions in the national government.

In the area of legislation, at all levels from local to national, women are taking an increasing interest. They are assuming responsibility in party organizations. Both individually and through some of their club programs many are trying conscientiously to inform themselves on issues and candidates.
