BAKERY SPECIALS HOME MADE BREAD Unsliced—Reg. 28c **19c**
DELICIOUS BROWNIES **6¢/30c**

Outboard Motor Boat Becoming Popular Craft

New York - (UP) - The outboard motor boat, fast becoming the most popular pleasure craft in the U. S., is also one of the most versatile.

Except for the Bayou Buggy and the Seminole Swamp Sled, which can glide over a few inches of water or even a patch of dry land, the outboard is the only boat that can be beached with its motor tilted up, eliminating any chance of damage to it.

Many boats, from canoes to sailboats, which were not originally designed for propulsion by an engine, may be adapted to take an outboard motor.

This can be done with the use of outboard brackets, available in local marine hardware stores. The brackets can be clamped to the side of a canoe or bolted to the transom of a rowing skiff or sailboat.

Peak Performance

However, before motorizing your boat, make sure it can safely use the motor you intend to purchase.

Is the boat built by a recognized boat builder and will it give peak performance when using recommended horsepower? If you are a water-ski enthusiast is the hull recommended for that sport?

Another factor to consider is material construction. Whether the boat is built of wood, metal or fiberglass, has the material been proved durable for your locale? Is the transom strong enough to hold two motors if desired?

Freeboard, the height that extends above the water, is something else that should not be overlooked. Big craft carry more freeboard, not because it is necessary to keep afloat, but for the large waves that are encountered in rough weather.

Flooding Minimized

Outboard motors have 16-inch and 20-inch motor drive shafts. The longer shaft permits a higher transom cut-out, thereby minimizing chances of flooding by a following sea. Most boats built today have a self-bailing motor well which allows any water shipped to run right out. Also there are outboards manufactured that have automatic power balling.

Last summer, this reporter witnessed a marine accident and took part in the rescue while sailing on Long Island Sound. Six fishermen, crammed into a 12-foot rented rowboat with an outboard motor, were swamped and overturned during a blow.

Valuable Lessons

Luckily, all were saved. But the accident taught some valuable lessons. First, there should not have been six people in the boat. The transom was low in the water and there was little freeboard due to the overcrowding.

Second, the motor was too powerful to handle properly. Finally, these Isaac Walton knew nothing of boatmanship.

To carry the more powerful outboard motors on the market today and to provide added versatility and stability, many outboard boats offered this year have greater beam than previously. With the greater and more varied use that today's outboard boats are undergoing, this development follows the general build-up in average boat lengths during recent years.

Cruiser Rise Rapid

A boat that has risen rapidly in the past few years in the outboard cruiser. Its popularity has grown because motor manufacturers are coming out with electric starters and remote control steering devices.

Today's new motors are made so that there are fewer maintenance cares for the owner and quieter, more versatile operation. In most medium and high horsepower motors, for instance, shear pins are replaced by slip clutches, thereby eliminating the frustrating job of changing sheared pins. And aluminum cowlings are being replaced with fiberglass, which serves a dual purpose. Fiberglass will not oxidize, as aluminum does. Also it absorbs sound, making for a quieter motor.

Special District Elections Voted

Salem - (UP) - The House Tuesday passed a bill regulating elections in 19 different types of special districts in Oregon.

Irrigation and drainage districts would be excluded from the bill.

The other 19 special districts would hold elections on the third Friday of May to elect directors.
