**The Medical Roundup**

by *Walter Alvarez*  
Emeritus Consultant in Medicine, Mayo Clinic  
Emeritus Professor of Medicine, Mayo Clinic

One of the best books I have found for the helping of alcoholics is "Just One More" by James L. Free (Coward-McCann, \$3.50). Free knows whereof he speaks because he once had trouble with alcohol himself.

His book is full of good advice, and it contains many addresses of organizations in the several states—groups of people who will gladly help an alcoholic to get straightened out. Free describes the several agencies that treat alcoholics, and try to get them off the stuff. He tells of doctors, Antabuse pills, clergymen, psychiatrists, lay therapists, out-patient clinics, Alcoholics Anonymous, and hospitals and sanatoria.

Free's description of the stages through which a man goes until he becomes a definite alcoholic is excellent. The first is "drawing a blank," or waking in the morning with no memory of the evening's drinking and associated adventures.

Next comes "sneaking drinks," a man sitting with friends, having a few cocktails, will go to the men's room, and on the way past the bar, coming and going, will gulp two double bourbons. Later, his wife and friends will wonder how he managed to get drunk on three martinis.

Then he becomes preoccupied with drinking, and before going out to dinner he will have a few snorts, just in case there shouldn't be enough alcohol at the party.

Along the way he starts gulping his drinks. Then he gets evasive about his drinking; he won't talk easily about it, as he used to do. Then he begins to have a number of "blanks." After this it takes usually 15 years for the man to end up in skid row.

As several alcoholics have pointed out, a man becomes an alcoholic the day he loses control over his drinking; when he drinks when he very much does not want to, and shouldn't. He is like the branch manager who goes on a bender the night his president is due in for a visit.

As Free says, perhaps the
