Emotion.Packed Play, Food on Bill In Soviet Theaters

By ALINE MOSBY
Moscow (UPI)—An evening at the theater in Moscow means a double feature: (1) four hours of emotional, exciting chest-beating across the footlights, and (2) food.

IN THE CIRCUIT COURT OF THE STATE OF OREGON FOR THE COUNTY OF JACKSON
In the Matter of the Estate of MARGARET HENRYETTA LENDERMAN, Deceased.
The undersigned, having been appointed Administrator of the above entitled estate by the Circuit Court of the County of Jackson, State of Oregon, and having qualified, notice is hereby given to all persons having claims against said estate to present them at the office of the undersigned's Attorney at 230 West Main Street, Medford, Oregon, properly verified, and with proper vouchers, within six (6) months from the date of the first publication of this notice which will be the 18th day of January, 1960.

viet Union is the world's best place for an actor to work. I decided after inspecting the winter theatrical program in Moscow.

For an actor, the audience is his, all his, for four hours. The curtain usually rises at 7:30 and most of the plays last until 11:30. There's no such thing as being fashionably late, so latecomers can't disturb the actor's orations. They have to sit out the first act in the chilly lobby.

Then the thespian can pull out all the stops. Acting in Moscow, right down to the smallest walk-on part, is more emotional than it is on Western stages. At first, that's astonishing to a theater fan used to the relatively subdued style of Broadway.

But this is a country of stronger emotions in everyday life, and the theater has to be that much broader to do ordinary life one better.

One long-run popular play, for example, is a real-life story telling how convicts and prostitutes built the White Sea Canal after the revolution. The heroine of "The Aristocrats," a truly buxom blonde, must have put in a good two miles striding around the stage with jaw outstretched during three acts. In one hysterical scene, she cried real tears and literally rolled around the stage, black velvet dress and all.

Another play dramatizes most fervently life in Siberia 50 years ago, and could be called a Western in Russian boots. In this supercolossal epic, the hero steals his father's mistress, kills her, and then snatches money his father gave her, blames the murder on his best friend, had his father put in an insane asylum, takes a lake, pond or river, it does have a great deal of importance in the curriculum of instinctive "learning."

The tendency to school is just about the first thing a baby fish knows how to do; they execute the maneuver effectively, even before they take their first mouthful of food. Some species of fish never get entirely out of the schooling habit as long as they live. Others, after they have completed the kindergarten phase of learning, go their separate ways.

Immediately after they escape from the egg, the babies rush together in a compact little group and reform it whenever danger threatens. Even a passing shadow or a slight vibration in the water will send them hurrying into a huddle.

The fisherman, as well as the scientist, pretends to know the reason for this action; perhaps, and then again, maybe not. We say it is a protective measure, but every once in a while the answer doesn't come out according to plan. It is supposed that schooling is a plan for survival; the theory being that a predator fish slashing into the school will succeed in gulping one or two small fish, while if they are separated, each little fish going its individual way, they could easily be picked off one by one. It is pretty well agreed among most students that Nature will willingly sacrifice the individual, but will try to save the species.

So far in the book of Nature, the chapter on fish behavior has some pages missing. There are some questions that have no obvious explanation.

It would be easy to understand if one or two, who were preceding at the head of the school, would react to a given stimulus and the rest would follow, but they don't. The entire school will turn at exactly the same time, not in a right or left turn, but in a right or left oblique. The system seems so elastic the entire group will go up, down or sideways, and execute it simultaneously.

If they do react to a signal, how do they all get it at exactly the same instant? If it is only an instinctive action how does it work so perfectly that the trigger trips each individual fish to respond in the same way? Should a predator fish cut through the school and scatter all the pupils, each darts away in a mad scramble, but immediately they turn and reform into a compact group again.

Should the school approach an obstacle, whereby only a narrow passage leads in the general direction they wish to go, they flow out into a line, but rush into a huddle again as soon as room is available. The fact that they all turn at the same time would seem to indicate they all react to the same impetus at the same split-second; some instinct triggers their every move. About the only logical explanation so far acceptable is

These Pupils Learn Many Things Without Teacher

A "school" of fish has little to do with education, but in the great "classroom" of the sea, a lake, pond or river, it does have a great deal of importance in the curriculum of instinctive "learning."

The tendency to school is just about the first thing a baby fish knows how to do; they execute the maneuver effectively, even before they take their first mouthful of food. Some species of fish never get entirely out of the schooling habit as long as they live. Others, after they have completed the kindergarten phase of learning, go their separate ways.

Immediately after they escape from the egg, the babies rush together in a compact little group and reform it whenever danger threatens. Even a passing shadow or a slight vibration in the water will send them hurrying into a huddle.

The fisherman, as well as the scientist, pretends to know the reason for this action; perhaps, and then again, maybe not. We say it is a protective measure, but every once in a while the answer doesn't come out according to plan. It is supposed that schooling is a plan for survival; the theory being that a predator fish slashing into the school will succeed in gulping one or two small fish, while if they are separated, each little fish going its individual way, they could easily be picked off one by one. It is pretty well agreed among most students that Nature will willingly sacrifice the individual, but will try to save the species.

So far in the book of Nature, the chapter on fish behavior has some pages missing. There are some questions that have no obvious explanation.

It would be easy to understand if one or two, who were preceding at the head of the school, would react to a given stimulus and the rest would follow, but they don't. The entire school will turn at exactly the same time, not in a right or left turn, but in a right or left oblique. The system seems so elastic the entire group will go up, down or sideways, and execute it simultaneously.

If they do react to a signal, how do they all get it at exactly the same instant? If it is only an instinctive action how does it work so perfectly that the trigger trips each individual fish to respond in the same way? Should a predator fish cut through the school and scatter all the pupils, each darts away in a mad scramble, but immediately they turn and reform into a compact group again.

Should the school approach an obstacle, whereby only a narrow passage leads in the general direction they wish to go, they flow out into a line, but rush into a huddle again as soon as room is available. The fact that they all turn at the same time would seem to indicate they all react to the same impetus at the same split-second; some instinct triggers their every move. Stocks Decline, Ignoring Employment Rise, Record Industrial Production

New York - (UPI) - Stocks during the past week ignored record industrial production, a sharp rise in employment, and moves to bring down our deficit in the balance of payments.

Camp Fire Girls

Twelve Birds The Twelve Birds group of Blue Birds from Jackson school have been busy since the first of the year.

The first meeting in January was held at the home of the assistant leader, Mrs. E. D. Grimes. Games were played then the group looked at things Nadine Grimes, Blue Bird member, had made.

At the January 12 meeting at the home of the leader, members were presented with Camp Fire Girls 1960 Golden Jubilee pins. The pins commemorate the 50 years since the founding of the Camp Fire Girl group. They were awarded to the group because they had brought in new members.

Because the Twelve Birds have grown so much, there are now 14 members, they plan to form a new group. Soon Jackson school will have two Blue Bird groups.

The group is studying about loyalty to the family, the school and the country.

Recently the girls visited the police station where they were shown a board on which all the accidents in Medford are marked. Officer Berle Stephens told why members must be so careful in riding bicycles.

Returning home the group saw some big girls with balloons. The Twelve Birds stopped and made a donation so each girl was given a balloon.

Juanita Franks, Reporter

PLOTTERS INDICTED

Amman, Jordan - (UPI) - Fourteen army officers and three civilians were accused of plotting to overthrow the government of King Hussein in an indictment released by the military prosecutor Sunday. The 17 have been under arrest since mid-1958.

high, steel operations set a new record, employment rose and unemployment fell - each a contra - seasonal move because of the return to their jobs of the steel workers.

Auto Output High For the week auto output and truck output were at their best levels since 1955. Steel held steady above 95 per cent of capacity. Coal output and car loadings spurred from the holiday weeks and electricity output set a record high. Retail trade rose and was 3 to 7 per cent higher than a year ago.

Du Pont, suffering from the appeal, fell more than 5 points on Friday and closed with a loss of 2 1/4. International Nickel fell 3 on the stockpile news. Weakness in these two points in General Electric brought industrials down on Friday and left them lower on the week.

So far in 1960 industrial shares have fallen in eight of the ten sessions. The losses amounted to 30.18 points and the two gains to 10.50 points, leaving the average down 19.68 points from the 1959 close.

Rails and utilities had six losses and four gains each. Heavy Selling

On Monday the market ran into heavy selling that knocked industrials down 8.57 points, their widest loss since the market for these stocks declined 9.14 points on Sept. 8. Tuesday's loss amounted to 6.73 and Wednesday's to 3.99. The market rallied 4.09 points on Thursday and dipped 0.85 for the group on Friday.

For the week, the industrials closed at 659.68 off 16.05; railroad 157.98 off 0.12; utilities 87.13 off 0.56; and 65 stocks 216.34 off 3.52.

All sections of the market were hit. Electronics took a severe drubbing in several instances. Rails outperformed the industrials and utilities moved narrowly.

Government reports were glowing for December. During that month industrial production came within one percentage point of its record

average of 3,536,139 shares, from last week's 18,021,086 shares, and a daily average of 3,605,417 shares. In the 1959 week sales were 21,015,080 shares, a daily average of 4,203,016 shares. Sales so far in 1960 have totaled 35,707,782 shares, against 45,235,801 shares in 1959.

December housing starts surprised everyone by rising to a rate of 1,310,000 for the year, against a rate of 1,210,000 in November. For all of 1959, housing starts totaled 1,341,000 units, against 1,141,500 in 1958 and set a new high since the record was touched in 1950.

Small investors turned to the treasury bill market and were able to buy 366-day bills that will give them a return of 5.36 per cent. The yield would have been higher had it not been for the demand of the small buyers in this market which ordinarily is patronized only by the wealthy and the big industrial and financial businesses.

Weakened Position Many took profits in stocks because of the money situation and what experts called a weakened technical position in the general list. Leadership generally continued poor. Sales for the week dipped to 17,680,696 shares, a daily

average of 3,536,139 shares, from last week's 18,021,086 shares, and a daily average of 3,605,417 shares. In the 1959 week sales were 21,015,080 shares, a daily average of 4,203,016 shares. Sales so far in 1960 have totaled 35,707,782 shares, against 45,235,801 shares in 1959.
