There are over 63 million women (14 and over) in the U. S. who make or influence 85 per cent of all consumer purchases. To sell this tremendous and ever growing market, national advertisers last year invested more than $719 million in newspapers.

SKATERS PRACTICE — Members of the American speed skating team race around the glass smooth course at Squaw Valley, Calif., as they practice for the forthcoming Winter Olympics. At right are the familiarly intertwined rings of the Olympic symbol atop the Tower of Nations. At left background is one of the spectator centers. —(UPI Telephoto)

## Deer Herd Competition Studies Now Underway

Portland–The job of determining the status of Oregon's big game herds–one of the most important tasks of game commission field agents –is now underway on a statewide basis on all big game ranges.

Initial phase of this annual study is herd composition inventories to determine the biological condition of the herd. In this study, herds are classified as to sex and age to determine the sex ratios in each herd and the yearly production. Herd composition usually begins shortly after the end of the hunting seasons and must be completed before the end of January before the animals lose their antlers.

Results of this study are expressed by the ratio of males per 100 females and fawns or calves per 100 females. The study provides an index as to sex and age of each herd for breeding and hunting purposes.

The second phase of the winter inventory will be population trend counts to get underway in February. Trend sampling is conducted in late winter when most big game animals are concentrated on the more open winter ranges. Such studies determine big game population densities on each winter range and are expressed in deer or elk numbers per mile of sample. By comparing trend counts with those from previous years it can be determined whether the herds are increasing, decreasing, or remaining constant.

**Full Count Impossible**

No attempt is made to tally all big game animals in Oregon. It has long been recognized that such a count is impossible. Estimates of total populations are sometimes made, but the fact remains that such estimates are mostly guesswork, with little basis for accuracy. In past years the game commission used population estimates but abandoned the method about 1940 in favor of the accurate trend count system.

About 7,000 miles of sample route are covered each year by game biologists on elk and deer winter ranges to determine herd densities. Some of the routes are travelled by jeep or pickup. On some ranges aerial surveys are conducted. But foot travel by ski or snowshoe is the usual method of travel, especially in rough mountainous terrain.

Results of the winter inventories, range conditions, hunter success, and other facts will be used as a basis for establishing next season's hunting regulations.

## Power Intertie Plan 'Inadequate'

Washington–(UPI)–The American Public Power association's legislative committee Thursday branded as "entirely inadequate" a proposal for construction of a private power line to interchange electricity produced by publicly-owned dams in California and the Pacific Northwest.

The committee's objection was based on a power exchange proposal recently outlined in a report of the Bonneville Power Administration.

It said the proposed private utility transmission line would be "entirely inadequate to provide the full benefits which will result by coordinating the power-producing facilities in both regions."

It said a "huge backbone, extra-high voltage transmission line is necessary to meet West Coast problems." It should carry power produced by both private and federal agencies, the committee said.

The association, which said it represented more than 1,000 "consumer-owned" power systems, planned to appeal to Chairman James E. Murray (D-Mont.) of the Senate Interior Committee to block any Bonneville agreement with private utilities until a study of West Coast power is completed.

## Students Die in Car-Train Crash

Bridgeman, Mich. – (UPI) – Three 17-year-old Bridgeman High school students were killed Thursday when their car was mangled under a speeding Chesapeake and Ohio passenger train.

Citizens in this little southwestern Michigan community were held in agonizing suspense by the accident for nearly two hours. Worried parents called police and school officials trying to learn the names of the young victims.

George Schultz, driver of the car, and his two passengers, Donald Krumroy and George Billington, all of Bridgeman, were killed at 10:20 a.m. They were not identified until afternoon.

Anxious parents and school children thronged the street until the victims were identified.

Police said all railroad crossing warning devices were working properly at the time of the crash. Police theorized the boys, en route to school to take midyear examinations, tried to beat the train to the crossing.

## Disaster Area Ruled in Hawaii

Honolulu – (UPI) – President Eisenhower has declared the lava-threatened Puna district in the Island of Hawaii a major disaster area, Gov. William Quinn announced today.

Quinn said federal money provided under the declaration would be used to help prevent new damage from the erupting Kilauea volcano and to repair roads and other state property damaged by the 10-day eruption.

Island of Hawaii residents suffered from strong sulphur fumes in some areas. At a school some 20 miles from the eruption, several children became ill from the fumes.

The Weather Bureau reported that smoke from the volcano has spread 2,300 miles west to Wake Island.

Wake reported 70 per cent of the sky covered with haze. An air crew from the island noted a haze layer below their flight along the entire route, averaging 6,000 feet above the ocean.

## Woods, Water, Wildlife

By Hank DeVoss

A good-sized fish story has worked its way up from way downriver and should be of interest to the frustrated anglers in the valley. It seems that the mail boat that makes the run from Gold Beach to Agness has been an hour and a half late per trip. The reason for the delay is that the steelhead are so thick in the lower river that the boatman has to slowly work his way through each hole in order to avoid chopping up a lot of fish in the propeller. What fisherman hasn't heard the lament of the old timer who tells of the days when the fish were stacked in the river like cordwood and so thick in places you could walk across the river on their backs? Well, it seems those stories still aren't lost and gone forever.

**THE FISH HOG**

**There comes a time every year during trout season when catching a trout requires more mental and physical effort than just throwing a hook in the water. Then many so-called sportsmen resort to chumming as a method of increasing the number of fish they catch. They have a concoction which they know will attract fish when it is put in the water. The fact that it isn't on a hook makes this attractor illegal but this is of small matter to the fish hog. He MUST get his limit!**

**DEFENSE WEAK**

One of the principal kinds of chum is called feed eggs and it usually is available at some sporting goods stores. Feed eggs have no use other than as chum and some sporting goods proprietors knowingly sell them for an illegal purpose. Their defense rests on some very weak arguments: "If I don't sell it to him, he'll buy it some other place." "If I don't sell him feed eggs, he'll use corn." "I just sell it; it's none of my business how it's used."

This is the same line of reasoning used by dealers who sell cigarettes, liquor, or dope to juveniles and it is a type of reasoning which has no justification in either case except for one fact; it makes money. It is this ethical irresponsibility which can endanger the sport of fishing as much as the actual lawbreakers. There are too many people being attracted to fishing as a recreation to take a chance with attitudes of this type and the concerned sportsman should do something about it.

**THE TIME IS NOW**

**Why fuss about it now instead of during trout season? Well, the dealers will put in their orders for trout gear right about now and if enough people raise a fuss it might help them decide it isn't a very good idea to include bait eggs in the ordering. That would take care of the excuse that they wouldn't sell it except that they have it in stock and would cause quite a loss if they threw it out. Ha!**

**GET IRRITATED**

Those fishermen who are worked up over the mud being thrown into the Rogue by hydraulic mining on Graves creek should be interested in the best way to stop it. Get actively irritated. It seems that the control of how muddy someone can make the river is in the hands of the state sanitary authority and they will stop the mud if they are convinced that this is an unreasonable use of public waters. They use an irritation barometer to determine this and will move when enough irritation is registered. So go and register.

**THE ANGLER'S LOG**

**All steelhead fishermen might as well put up their rods until this east wind stops blowing. This is a prediction which has quite a following in that there are a number of fishermen who won't trouble to wet a line if the wind is from the east. The belief is said to have originated with Fred Popken, one of the old-time river guides. It is said that when 'Pop' bared his chest to the wind and decided the fish wouldn't be biting, they didn't. The fishing this past week certainly seems to bear this out.**

**Applegate river** – The fish won't get here for quite a while yet. There may be a few up but this river is noted for its late run. February is best.

**Rogue river**–The low water temperature seems to be breaking and if there is some rain there might be fish at Galice soon. How's that for a weatherlike fishing report? Quite a number of dark fish have been caught in the Applegate-Ferryhole run and it's believed that they are all fall fish.

**Illinois river** – Is low and clear. An angler check yesterday showed one fish for 30 fishermen. Anyone willing to try light gear using about 4 pound test line and leader would have nearly a sure thing on hooking a fish but poor odds on landing it. The fish are there.

**Smith river**–Low and clear. Fishing has been slow except at the falls where a few are caught each day. Ditto as for the Illinois; try light gear.

**Klamath river** – The water is cold and low. Business has been very, very slow. Wait for a warm rain.

**THE OPTIMIST'S CORNER**

**Every week I call the weather bureau and try to talk them into sending some rain our way. Most of the time I'm frustrated by their calm "I won't say it if it isn't so" attitude, but this week I think I made some headway. I hope so!**

**GOOD LUCK!**

Noted pianist-statesman Ignace Paderewski loved to play bridge. He had a bridge table installed in the official railroad car he used as Premier of Poland.

THE NEW McCULLOCH ONE/40 CHAIN SAW

Only $154.95

Only McCulloch gives you so much saw at such a low price. The ONE/40 is built to handle tough cutting jobs for years. Costs just $154.95.

- Torture-tested for dependability
- Lubri-Mac Automatic Oiler
- Takes bars up to 24"
- Cuts stumps within 1½" of ground
- Pintail Chain

★ ★ HIGH TRADE-INS ☆ ★

FORD'S ECONOMY TWINS RUN ON PEANUTS, TOO!

How'd you like your savings? *New size* or *big economy size*? We Ford Dealers can save you plenty on *both* sizes with our 1960 Economy Twins:

Want *new-size* savings? The Falcon's first saving is its low price, up to $124 *less* than other 6-passenger compact cars,* but that's not all. You get up to 30 miles per gallon on regular gas. Save up to 15% on insurance, save on tires, parts—everything.

Yes, all this—in a car that carries six big people and all their luggage.

For savings in the big economy size try our FAIRLANE 500. It's far more Ford, costs up to $142 *less* than last year.*

At no extra cost, you get many luxury-car features like *rear seat* arm rests, *two* sun visors, *extra* ash tray, and color-keyed steering wheel. There's real built-for-people comfort inside. Up to four inches more shoulder room. There's plenty more leg room, hat room, too . . . *for all six passengers.*

Right now, we Ford Dealers are holding visiting hours for our Economy Twins. Come in and see how much you can save: *Big size* or *new size*, value-test our Economy Twins soon.

*Based on a comparison of manufacturers' suggested retail delivered prices
