The Medical Roundup

by *Walter Alvarez*
 Emeritus Consultant in Medicine,
 Mayo Clinic
 Emeritus Professor of Medicine,
 Mayo Clinic

What is a Hypochondriac?
 People want to know what is a hypochondriac, and probably the best definition is, a man or woman who for years remains convinced he or she has some disease, such as cancer or heart trouble — and cannot be reassured.

DR. ALVAREZ I was just reading of a man in a hospital who got the idea that a slight protuberance of his skull on one side was a cancer.

Every chance he got he would waylay a doctor and ask him anxiously about his "lump." Every doctor, day after day, told him it was nothing, but all this reassurance failed to cheer him in the slightest.

One day a wealthy man of 60 came a long distance to see me about a cancer he was sure he had in his stomach. He traveled with a trained nurse to take care of his health. He admitted he had seen a large number of consultants, all of whom had assured him he had no cancer. But he still was sure he had it. **Wouldn't Convince Him**

As, just then, I was very busy, and did not want to waste any time I asked him if he would be satisfied enough to get home well if I were to get a surgeon to open his abdomen, under local anesthetic, and to lift out his stomach and show him that it was normal. Very honestly, he said "No," that that would not convince him. So we parted good friends, and he left to go and see a prominent stomach specialist he had just heard of.

In 1905, when I was an intern in a big City Hospital, I had a patient come in who taught me not to waste time with hypochondriacs. This one was convinced that a frog was hopping about in his stomach. I got one of my fellow-interns who was an amateur magician to help me. We gave the man an emetic and while he was "heaving

Jonah," my chum dropped a "palmed" frog into the basin. Naturally, the patient was thrilled and very happy. As he said, "You see; I was right, but no one but you two would believe me."

My old professor, when I told him how I had "cured" the man, shook his head, and said, "You'll learn soon not to waste your time." Next day my patient came to say that I had been just too late; a dozen little frogs had spawned and were hopping about in his stomach! In my youth I used to think that an operation should cure a hypochondriac who thought he had a severe appendicitis or stomach ulcer or cancer, but I soon saw scores of hypochondriacs who, after a supposedly very successful abdominal operation, had soon gotten back their old pain.
