Surgery Saves Babies Having Heart Defects

Los Angeles (Science Service) — The lives of babies born with a serious defect of arteries arising from the heart may be saved and sustained by a new surgical procedure. The new technique is reported from the University of California, Los Angeles, where Drs. Arthur J. Moss, James V. Maloney Jr. and Forrest M. Adams developed the procedure to temporarily correct the condition known as transposition of the major heart vessels.

Insufficient Oxygen
A baby born with this condition has the pulmonary artery arising from the heart chamber where the aorta normally originates and vice versa. (The pulmonary artery is the vessel through which blood is pumped to the lungs. The aorta is the large vessel which supplies blood to the rest of the body.) In these babies blood does not contain sufficient oxygen so that they are intensely blue and usually die not long after birth. Permanent surgical correction by switching these major vessels is mechanically possible but has not been successfully accomplished. It requires use of the heart-lung machine, a procedure which infants do not tolerate well.

Hole Made
In the new UCLA procedure, which requires no heart-lung machine, a hole is made between the two upper heart chambers. A branch of the displaced pulmonary artery is linked to a vein returning blood to the heart. This allows more oxygen to mix with the blood supplying the body tissues. The procedure has been employed in six cases. Three babies died because of their poor condition at the time of surgery. In the three survivors improvement was dramatic. All signs of heart failure disappeared, appetites increased, the weight became normal. Two are no longer blue. Ages of the three survivors are seven, 14 and 17 months, respectively.

SIMULATOR TESTS

Westbury, N.Y. — Two mountain peaks simulated in a special horn-shaped "black chamber" are testing the navigational antennas of commercial and military aircraft. The unique test, devised by engineers of Dorne and Margolin, Inc., checks the antenna's power and ability to transmit in all directions, an important aspect of safe flying.

Use Remnants

7061
by Alice Brooks

An apron that is practical and becoming at the same time. For summer-wear without blouse.

A thrifty apron — can be made of remnants. It is easy sewing; cherries are applied or embroidered. Pattern 7061: transfer of cherries pattern.
