Sniff Means More Than Nose-Blowing

Atlantic City – (Science Service)–To a psychoanalyst, a patient's sniff means more than the need for a handkerchief.

Dr. Jack Sheps, psychiatry instructor at the College of Physicians and Surgeons of Columbia university, told the American Psychoanalytic association here that exploration of the patient's associations to his nasal congestion will do much to undo his lifelong clinging to infantile fears.

Dr. Sheps said there is a close correlation between the nose and the mouth and thus sensations in the nose can revive infantile recollections. This helps patients gain awareness of unresolved fears stemming from early experiences, the instructor said.

ROCKET

Have your expenses shot up this year? Has inflation got you worried? Many people are concerned—among them 64 representatives of labor, education, government and business. They discussed this problem at the American Assembly not too long ago. Their conclusion: we *can* have dynamic growth with reasonably stable prices and low unemployment. But we can only accomplish this by working together, and working hard. For our success depends on a *steady rise in productivity.*

To gain a better understanding of how our system works—and your role in it—write today for the free booklet, "Prices, Growth and You", to: American Assembly, Columbia University, New York 27, N.Y.
