Second Cover Spray Should Be on June 18

The second cover spray on pears and apples should be completed by June 18, C. B. Cordy, county horticulturist, reminded orchardists recently.

On pears sprayed with air blast sprayers, Cordy said eight pounds of DDT plus three pounds of Dieldrin per acre will control codling moth and psylla. For mites, if a Kelthane program is followed, eight pounds per acre should be used on all varieties of pears, and for a Tedion program, eight pounds per acre should be used on varieties not sprayed in the first cover.

Cordy said for those using hose gun rigs, the spray should be 1½ pounds of DDT plus ½ pound Dieldrin, plus 1½ pounds Kelthane or 1½ pounds Tedion as indicated above.

On apples, the spray should be 12 pounds of DDT and six pounds of parathion per acre or two pounds DDT and one pound parathion per 100 gallons.

When orchards adjoin pastures or hay crops onto which the spray may drift, Cordy recommended using only eight pounds Guthion per acre or 1½ pounds per 100 gallons on the nearby rows. He stressed using every precaution to minimize drift. If mites are building up, he said to add either Kelthane or Tedion.

Added to the sprays may be one to two ounces of a spreader sticker per 100 gallons, he added.
