Hypothyroidism
Many a woman asks why, when tests seemed to show she had hypothyroidism (poorly acting thyroid gland) the taking of thyroid substance didn't do her any good. It only made her jittery and unable to sleep.

hyperthyroidism. All I had to do was to ask her when she had her gallbladder x-rayed and she said three weeks before. That explained perfectly why she had a great excess of iodine in her blood; it came from the iodine-containing drug that had been given her in large amounts to make her gallbladder visible. And so it goes. All this means that when the laboratory findings do not fit with the person's symptoms, a more thinking ought to be done, and the conflicting tests should be repeated.
