

Hatfield Off on South America Trip

Portland — Gov. Mark Hatfield left Wednesday night on the first leg of a trip to South America.

Hatfield flew to Seattle en route to Washington, D.C., where he will rendezvous with governors from 35 other states.

The governors will make a 10-day goodwill tour of South America, which Hatfield hopes to combine with trade conference meetings involving Oregon.

The tour will include Argentina and Brazil.

2-Skirt Style

SIZES 14 1/2-24 1/2

by Marian Martin

Like a fullish or slim skirt? Choose the one that does most for YOU! Your reward (for one day's easy sewing) is a casual that fits and flatters perfectly.

U. S. Plans Lunar Orbit for Three Men by 1968

Washington (Science Service) — The United States has yet to launch a man into space, but plans to put three men into orbit around the moon and bring them back to earth by 1968.

The design of the lunar vehicle, called Apollo, has not yet been settled, Dr. Frederick R. Riddell, specialist in space vehicle design for Avco Research and Advanced Development division, Wilmington, Mass., said here. Avco is working on Apollo design for the National Aeronautics and Space Administration. Dr. Riddell was here to address the sixth session of the Space Research and Technology Institute at the University of Maryland.

"The shape of the Apollo vehicle will depend upon the path it takes," he told Science Service. Dr. Riddell favors a slender, bullet-shaped design as the best shape to solve the problems of intense heat involved in re-entry from a distance as far as a circum-lunar orbit.

The main obstacle to solution of the heat problems involved in the re-entry of the future Apollo is that there is no test facility on earth to duplicate temperature conditions of re-entry from the scheduled 17 1/2 around the moon and back.

Dr. Riddell said, "Because of this ignorance, we will have to allow a little leeway in design and materials."

"Marked Departure"

Apollo will represent a "marked departure" from the Mercury capsule that will be used to launch a man in space sometime this year, according to the schedule of NASA.

"The Mercury capsule is purely ballistic. Once it is in launch, it is beyond control," Dr. Riddell said. "The Apollo will be designed to have the maneuverability the Mercury capsule lacks.

Present plans are to supply maneuverability with small rudders.

The great problem of protecting man from the heat to which the exterior of Apollo will be exposed both in launch and return may be solved by combining in various areas of the vehicle new materials, plastic and ceramics, to draw heat away from the ship. The way to accomplish this is known, the Avco specialist said.

TILE PROCESS

Cleveland—Most of the ceramic floor tiles are unglazed and are fired at a temperature of more than 2200 degrees F to withstand hard abrasive wear.
