

Hemingway Being Treated at Mayo For Hypertension

Rochester, Minn. (UPI)—The Mayo Clinic announced today that novelist Ernest Hemingway, 61, who entered the famed diagnostic institution Nov. 30 under an assumed name, is being treated for hypertension.

A brief clinic announcement said Hemingway's condition "is regarded as satisfactory."

"He has received no surgical treatment and none is contemplated," the clinic said. "It is necessary, however, that his right to privacy be respected and that he have the benefits of rest and quiet."

Hypertension is an abnormally high blood pressure. It is at times accompanied by organic changes such as nephritis and diabetes, and by nervousness, headaches and dizziness. But the announcement did not elaborate beyond naming the ailment.

Today's announcement gave no indication when Hemingway would be released. Earlier, a Mayo spokesman said the Nobel Prize-winning author should be discharged within 10 days from St. Mary's Hospital, where he is staying while undergoing treatment.

Hemingway entered the clinic after a hunting trip in Idaho.

The Mayo spokesman said Mrs. Hemingway and the writer's physician had refused permission for any interviews with the famed patient.

Hemingway, who won the Pulitzer Prize for fiction in 1953 and the Nobel Literature Prize in 1954, first achieved world fame with publication in 1926 of "The Sun Also Rises."

The burly novelist is probably the most famed American writer of his generation. His permanent home in recent years has been just outside Havana, Cuba. But Hemingway has not been there during recent months when diplomatic relations between Cuba and the United States reached the breaking point.

Polaris Missile Fired Successfully

Cape Canaveral, Fla. (UPI)—America's most versatile ballistic missile, the Navy's Polaris, thundered over the Atlantic Ocean 1,600 miles Wednesday in its first firing of the new year.

The Polaris, a highly mobile weapon capable of delivering in one blow a warhead with 40 times the destruction of a Hiroshima-type atomic bomb, will be launched from land-based launching pads, ships and submarines during 1961.

Scientists early today were busy outfitting one nuclear submarine, the Robert E. Lee, for a submerged launching of the Polaris 30 miles off the coast.

The launching, expected soon, may be the final tryout for the Robert E. Lee, America's third ballistic missile-firing sub. The nation has two other atomic submarines, the George Washington and Patrick Henry, on duty in the Atlantic with 16 nuclear-tipped Polaris each.

The shot Wednesday marked the third success in as many tries for the advanced model Polaris, which packs a new solid-propellant and a glass-encased second stage to push its range to 1,725 miles. Earlier models being fired by the submarines have a 1,300-mile ability.

One Person Hurt In Auto Accidents

One person was injured in one of two accidents occurring on Highway 99 earlier this week, state police said.

Merle Edward Willis, 37, Lowell, Ore., was treated at Rogue Valley hospital for minor injuries received when his car rolled over in the Blackwell hill area, north of Central Point about 7 p.m. Monday.

State police said the car was southbound on the highway when it pulled out to pass another southbound car and almost met a northbound car head-on. Both of the other cars pulled onto the highway shoulder to allow Willis to pass. Willis attempted to pull back into the line of traffic and his car went out of control, police said. The car was extensively damaged.

Cars driven by Harold Cecil Sloper, 47, of 4656 South Pacific highway, Medford, and Viola Agnes Waggoner, 54, of 501 Fifth st., Phoenix, collided on the South Pacific highway near the entrance to the roller skating rink, south of Medford. The Waggoner car was skidding for a left turn into the skating rink. Sloper said he was observed by a mirror car which was driving in the same direction.

"So Long" to ALL 1960 MODELS!

CLEARANCE

BUY BYE SALE!
