Your Hearing

QUESTION: Does the way a person speaks reveal his ability to hear?

ANSWER: A panel of specialists selected by the Medical Society of the County of New

York agrees that a hard-of-hearing person is apt to have monotonous speech and sometimes speaks too loudly.

Poor speech is just one of the signs of a hearing loss which give away the very secret many persons hope to hide. It is much easier to wear one of Sonotone's featherlight miniature hearing aids and know you are not embarrassing your friends by talking too loud. A FREE audiometric test and analysis will determine if you really need hearing help. Call or write today for an appointment without obligation.
