## When is a watch not a watch?

When it's a chronometer.

**What is that?** A timepiece that has been certified as 99.98% accurate.

**Who says so?** In Switzerland, any of seven government testing stations.

**Anyone else?** Absolutely not.

**What are the official tests?** Each wrist watch is timed against electronic equipment in (1) an oven, (2) at 4° Centigrade, (3) at room temperature. Each test involves five different positions.

**How long does this take?** Fifteen days.

**What are the standards?** There are 86,400 seconds in a day. The watch cannot vary more than six of those seconds in 24 hours.

**Then what?** If it passes, the watch is issued an individual, numbered Timing Certificate.

**If it fails?** It is just a watch.

**Will the Swiss Government vary these standards?** Never. They are inflexible.

**How many watch movements were produced in Switzerland in 1960?** 42,225,000.

**How many become certified chronometers?** About one tenth of 1%.

**How many chronometers have been produced in the past 30 years?** 487,647.

**Hasn't one company produced well over two-thirds of this amount?** That's quite true.

**The exact figure, please?** 312,220.

**That company's name?** Rolex.

No doubt of it, a fine watch gives a man a finished look... distinguishes him as a person of taste and judgment. Rolex watches are both elegant and masculine. They combine stunning design, rugged grace and unerring accuracy. None are cheap, some are very expensive. Each is the best, the very best, of its class. To a gentleman, a Rolex is not just a watch, but a proud possession.
