Paper-Packaging Industry Reports Higher Earnings

New York (UPI)—Led by the paperboard segment of their industry, producers in the paper-packaging field have been able for the most part to report their sales and earnings at the three-quarters mark well above 1961 levels.

A review of the earnings statements of 25 major producers showed that earnings at the end of nine months were on the average eight per cent higher, on a six per cent increase in sales, over the corresponding period a year previously.

For two-thirds of those whose reports have been surveyed, sales were five per cent to 11 per cent higher in the nine months period. Only one showed smaller sales than in the same period of 1961, and profit margins generally were higher.

Not as Outstanding The third quarter showing in the paper industry, however, was not quite as outstanding as was the picture in the first half of 1962. More than half of the companies reporting for the three months through September showed year-to-year sales gain rates less than those they reported in the first six months.

On the general paper-packaging scene, paperboard production had the prettiest picture. It may attain a new peak in 1962 when the final figures are in, and perhaps may be as high as six per cent above last year.

Good demand has even allowed some price increases in primary containerboard and box board, and the increases were fairly well kept.

Demand for printing papers and allied stock failed to improve enough to allow price increases, and generally the usual autumn increase in these lines has been disappointing, industry quarters said.
