

Schools Will Complement Each Other, Says Educator

Our state-assisted educational institutions will move markedly to complement each other and Oregon State university will be reflected more and more as a technological and scientific institution in the future, said Dr. James H. Jensen, president of the university, at a meeting Monday evening in the Red Cross building, Medford.

The president's appearance here was sponsored by the Medford unit, Oregon State Mothers club. Mrs. Roland Tabor, program chairman, introduced Dr. Jensen. Mrs. John Schroeder is president of the local unit.

Dr. Jensen explained that the university has an enrollment of over 10,000 students, with percentage increases in each class except the seniors. The freshman class increased one per cent over last year; the sophomores 15 per cent; the juniors 30 per cent and graduate students, 20 per cent.

He reported 825 students in the agricultural school, 1250 in business, 1500 in education, 1525 in engineering, 425 in forestry, 625 in economics, 1000 in humanities and social sciences, 425 in pharmacy and 2100 in the science school.

Operation costs of some \$25 to \$26 million are handled through the state assistance of

\$12 million and the remainder in federal funds, individual gifts and grants and dormitory operations, the president explained.

With more enrollment, a dean of students, Robert Chick, has been assigned, in addition to Dan Poling, dean of men, and Helen Moor, dean of women. To further facilitate administration, a dean of faculty and administration soon will be made.

Dr. Jensen related the honors which Terry Baker, nationally known athlete, has brought the school, and also told of the interest gained by the team of five students from the university who participated in a recent College Bowl program on nationwide television.

During the meeting, Mrs. T. A. Culbertson, ways and means chairman announced a rummage sale set for February 8 and 9 to raise scholarship funds.

The program was furnished by a girl's quartet from the Medford High school vocal music department under Lynn Sjolund, instructors. Appearing were the Misses Jean Allen, Jacque Long, Christine Hellman and Pat Selby.

Prior to the meeting a no-host dinner at Stanley's restaurant honored Dr. and Mrs. Jensen.

WORK SMARTER - NOT HARDER

By BERNICE STRAWN Oregon State University

When you get out your electric skillet to cook a pot roast, have you ever wondered if this is really the economical way to do the job? Which uses the least electricity - the electric skillet or a pan on the range?

Because small appliances are so popular these days, home economists at U. S. department of agriculture research laboratories sought answers to these questions. They cooked 11 different foods, such as pot roast, vegetables and french fried potatoes.

The electric fry pan used about 20 per cent less electricity than the range for doing the same job.

They say portable broilers use less electricity too than when the same foods are cooked in the range broiler. We are not advocating that you chuck your range, but now you know the facts.

Cream type wax such as you use to clean the outside of the refrigerator will remove some inks and is also good to remove a grimy film from plastic. Sometimes rubbing alcohol will take off ink spots, too.

How many clothes make a washer load? You've heard that overloading is hard on the washer and clothes don't come clean.

You can't rely entirely on the weight of clothes as a guide. For instance, eight pounds of sheer curtains make a far bigger stack than eight pounds of sheets. If the sheets are about right for the washer then you would have to cram this many curtains in with your foot.

Your best guide to loading is your eye. Clothes need to be put in loosely with plenty of room to move around. If they are crowded, soil can't shake loose or find room to float away from the garment.

Try this sweeping time saver. Wet one edge of a newspaper and lay it on the kitchen floor. The paper clings to the floor and litter can be swept onto it. Roll up and toss.

To loosen the grip of bolts on wood, drop peroxide or vinegar on them and allow the drops to soak in.
