Small Worlds Around Us

By LYNN M. WATKINS
(Register and Tribune Syndicate, 1963)

Poor Ant Color Blind and Near-Sighted—We Think
After prolonged and careful examination with microscope and calibrated instruments, one conclusion was evident: The structure and function of an ant's eyes are pretty slipshod.

According to the findings, the ant is color blind and terribly near-sighted. It can hardly see a camel right at the end of its nose. By these deductions it must therefore be assumed the little creatures locate their food and recognize their friends by smell or touch.

It should also be true that an ant with its nostrils plugged and its antennae short-circuited would be helpless and would eventually starve to death right in the midst of its favorite food. The structure of ant-eyes, measured by the yardstick of what has been discovered in the study of human and animal eyes, would indicate the exactness of the findings.

So the six or seven hundred ants, swarming in and out of the glass jar that held half a pound of red, yellow, green, black, white and pink candies, were merely following their noses. Anyway they were a happy and very busy group of insects.

Seek Out Crevice
The jar sat on a davenport table, the table on a Turkish rug. But the ant-folks had crossed the rug, climbed the table-leg and searched out a tiny crevice in the rubber gasket that was supposed to seal the jar.

The first arrivals, after locating the treasure—and the way in—had alerted the rest of the gang and they all came. It was great fun for the ants, and the party lasted until someone picked up the jar and discovered it was literally crawling with ants.

There was a steady stream of the little demons going in, and a constant line going out. It was immediately evident the entrance and exit was pretty small, for the little creatures had to limit the load they carried to a very small mass in order to get out.

There was extreme crowding, too, as only one ant could get in or out at a time. There was always a waiting line, but the creatures seemed to have worked out a system. They lined up and took their rightful turn.
