

RED CHINESE GREETING — Mao Tse-tung, chairman of the Central Committee of the Chinese Communist Party, greets U.S. Negro Robert Williams and Mrs. Williams as they arrive at a reception in Peking. Williams was on the reviewing stand during a parade in which paraders carried placards and shouted "workers and oppressed peoples and nations unite" —

stand four square behind the American Negro in the struggle against racial discrimination." Williams, an American who works as a propagandist for the Castro regime in Cuba, fled to Cuba in 1961 to escape prosecution in the kidnapping of a white man and wife during racial riots in Monroe, S.C. (UPI)

### Small Worlds Around Us

By LYNN M. WATKINS  
(Register and Tribune Syndicate, 1963)

**Men Tough On Each Other But Toughest On Animals**  
Man's inhumanity to man is pretty mild when compared to his inhumanity toward creatures lesser than himself; creatures who cannot defend themselves, but must submit, often to pain, long continued suffering, and even a slow and agonizing death. There are of course some excusable and justifiable exceptions, where scientific research may help future animals, or man himself, to live better, longer, or less painfully.

Usually however, these experiments are conducted with a minimum of discomfort for the unwilling subject. What should be objected to is the unnecessary cruelty to man, whose only motive for mistreatment is his personal feelings, either when angry, or for the satisfaction of hurting something weaker than himself.

**Human Nature**  
Some unfortunate neighborhoods harbor a human monster that poisons dogs. These depraved individuals, supposedly possessing a soul, and some human characteristics, have been known to pound pulverized glass into a piece of meat; the dog that eats it dies a long, lingering death, whimpering in a pain too great to endure.

There are examples of cruelty, activated by the profit motive, where no anger is involved, or spirit of revenge, but where man descends to levels lower than any beast, by deliberate and unbelievable cruelty, and all for blood money. Some diabolical monster, in human form, discovered that frog legs cut from the frog's body, turned dark. To avoid this, the legs were torn forcefully from the living frog. Then with brutal unconcern, the frog, still alive, is tossed into a pile of other legless frogs to die a lingering death. Seems impossible that such a condition should exist, but it does, men with bloody hands inflict this atrocity on helpless creatures, just so the legs will be whiter when served, and bring a little more money.

At such times, and for no better reason, men become lower than the creatures they misuse; our civilization and culture should have no tolerance for such an act.

ard to come to the owner and request that the animal be kept at home. And seemingly worse, the report of the demented man who deliberately shot a cardinal, right in the very middle of its song, merely because the melody awakened him while he was taking a nap.

Unfortunately there are some of these people scattered throughout our society, and it would take a trained psychiatrist to explain what motivates them. We should condemn, as well as feel a little sorry for the boy who excitedly pulls the wings and legs from a fly, or any other bug, just "for kicks." He may argue "the fly feels no pain," but the act itself, in a small way at least, adversely affects his thinking processes. The residue of cruelty could be accumulative, making it easy for him to become inhumane toward other creatures or toward some other human being.

Acrowd this desk come many reports of man's cruelty to defenseless creatures, some actually fiendish; acts of a disorganized mind. Just this week we received a report of a tame family cat, beloved by its family, tossed back into its owner's yard with its head bashed in, evidently by a club wielded by a fiendish neighbor who hated cats, but was too much a cow-

### City Police Check Three Accidents

Shireen Lee Prough, 16, of 1409 South Jasper st., was slightly injured Saturday when the car which she was driving ran off the roadway at Oakdale and Holmes aves., according to Medford city police reports.

Miss Prough was treated as an out-patient at Rogue Valley hospital. The accident occurred about 3:15 p.m.

Two vehicle accidents in which no injuries were reported were investigated by police Saturday. There were no accidents reported in Medford Sunday.

Williamson Garman Black, 72, White City, was cited for following too close after he was involved in a collision with two other vehicles at Highway 62 and Interstate 5, according to police.

Drivers of the other vehicles were William Clarence Bowne, 24, of 804 Broad st., and Eleanor Mackay Petterson, 47, of route 4, box 462. The mishap occurred about 11:35 a.m.

Vehicles operated by John Edward Crandall, 59, of 1317 Whitman st., and Norman Alvin Butts, 28, of 2569 Norman dr., collided about 12:15 p.m. at Holly st. and Holmes ave. Officers said no citation was issued.

### Evidence Indicates Science Approaching Solution To Colds

By DELOS SMITH  
UPI Science Editor

NEW YORK (UPI) — The evidence that the rhinoviruses are the common culprits in the common cold is now of such volume that many medical science authorities are confident of conquering this minor scourge of mankind before too long.

The newest contribution to the evidence was made by a group of scientists who studied "minor respiratory disease" as it appeared spontaneously among Marine corps recruits undergoing basic training at Camp Lejeune, N.C.

Over a period of two years it appeared some 800 times. In each case the victim was swabbed thoroughly for viruses and the swabs were subjected to laboratory tests designed both to yield any viruses they contained and to identify those viruses.

Not all "minor respiratory disease" is clearly recognizable as the common cold, one must keep in mind. To guide them the scientists had the generally accepted tell-tale symptom of the common cold, which is "nasal obstruction or discharge" usually without fever.

From the recruits who had that primary symptom, the scientists usually got rhinoviruses. From some they got coxsackie virus group A, type 21, which also is scientifically suspected of being a cause of the common cold.

But in the recruits who yielded adenovirus — still another suspect virus — the "minor respiratory disease" was less minor than in the others and involved more areas of discomfort.

A puzzling finding was that some young marines with the primary common cold symptom yielded no viruses of any kind. This pointed up the immense difficulty in finding the cause or causes of the common cold, as the scientists remarked in reporting to the New England Journal of Medicine.

"Illnesses in the virus-nega-

tive group may have been caused by presently unrecognized viruses, non-viral infectious agents, allergy, non-infectious conditions or a combination of these possibilities," they said. Furthermore, there can be undefined things in the state of being a marine recruit and in the environment of a military "boot" camp which could have influenced their results. They added in warning against a too-swEEPING incrimination of the rhinoviruses.

The scientists were Drs. B. R. Forsyth, H. H. Bloom, K. M. Johnson and R. M. Chanock of the National Institutes of Health and the Navy.

Rhinoviruses form a group which has been identified only in the past few years. "Rhino" means nose, that being the organ where they habitually reside. Adenoviruses have glandular preferences and coxsackie family contains paralyzers and killers.

The scientific optimism regarding the common cold was reflected in this editorial com-

### Fjarli Registers At Medical School

Delmar Duane Fjarli, son of Elmer J. Fjarli, 639 South Stage rd., has registered as a senior in the Loma Linda University school of medicine.

He is one of 373 students registered in the program leading to the doctor of medicine degree. The student is in his fourth year of the four year program. He has already satisfied the curriculum's preadmission requirements by attendance at Walla Walla college, College Place, Wash., where he received the bachelor of science degree.

ment of "The Lancet," authoritative medical science journal: "We are well on the way to unravelling the biology (causes) of this disease." Once science has identified a causative virus it usually can produce a vaccine against it.

### Principal Suggests Boys' Summer Camp

CORVALLIS (UPI)—A summer camp for boys who are having trouble in high school has been suggested by Harold Kleiner, principal of Grant High School in Portland.

Kleiner made the suggestion at the fall conference of the Association of Secondary School Principals.

He said the living-in camp would be for youths who are having trouble with their studies. The boys would plant trees or do similar work, he said.

Kleiner said at such a camp the boys would learn to work and possibly have a few hours of class work each day. This would help them develop responsibility so they could hold jobs, he said.

Last summer Multnomah County operated the Oxford project, under which high school youths were employed to develop a county park on the Sandy River.

### PRINCIPALS TO MEET

EUGENE (UPI) — Nationally known speakers in the field of education are expected to draw 500 elementary school principals to their state convention at the University of Oregon Oct. 13-15.

#### WHAT THE TAX BILL WOULD MEAN TO YOU—II

(Second in a Series of 10 Columns)

The way the tax rate cuts in the 1963 tax bill have been explained to you is in terms of that mythical "married man, two children, gross income of . . ." or "single person, gross income of . . . standard deductions." Forget them. They're statistics, not you.

The table below, prepared by the Research Institute of America, will tell YOU, a real person, what the rate cuts would mean to you on the taxable income you report on your income tax return after you have subtracted your real deductions and exemptions.

The 1963 tax bill would cut rates for individuals in every bracket, from top to bottom. Part of the rate reductions would be made in 1964, the full reductions would apply for 1965 and on. The present rates, which run from a low of 20 per cent to a high of 91 per cent, would in 1965 start at 14 per cent and go up to 70 per cent.

Suppose you, a married man, itemized your deductions on last year's Form 1040 and would up with a taxable income of \$6,000 on line 11d, after subtracting your exemptions and deductions.

Your tax last year was \$1,240 and it will be \$1,240 for 1963 on the same \$6,000 of taxable income. But if the House-passed bill becomes law, your tax for 1964 would drop to \$1,080 and for 1965 to \$1,000. You then would be saving \$240 a year just from the new, lower rates. Now take out your last year's tax form, see what you entered on line 11d and check on this table what your tax savings would be.

Taxable Income	Married Persons		
	'63 tax	'64 tax	'65 tax
\$4,000	\$800	\$680	\$620
\$6,000	\$1,240	\$1,080	\$1,000
\$8,000	\$1,680	\$1,480	\$1,380
\$12,000	\$2,720	\$2,420	\$2,260
\$16,000	\$3,920	\$3,500	\$3,260
\$20,000	\$5,280	\$4,720	\$4,380
\$24,000	\$6,800	\$6,080	\$5,660
\$28,000	\$8,520	\$7,580	\$7,100
\$32,000	\$10,400	\$9,220	\$8,660

Taxable Income	Single Persons		
	'63 tax	'64 tax	'65 tax
\$4,000	\$840	\$740	\$690
\$6,000	\$1,360	\$1,210	\$1,130
\$8,000	\$1,960	\$1,750	\$1,630
\$12,000	\$3,400	\$3,040	\$2,830
\$16,000	\$5,200	\$4,610	\$4,330
\$20,000	\$7,260	\$6,450	\$6,070
\$24,000	\$9,560	\$8,530	\$8,030
\$28,000	\$11,980	\$10,720	\$10,090
\$32,000	\$14,460	\$12,960	\$12,210

Many of us would get a further tax break in the form of a new, minimum standard deduction if the 1963 tax bill becomes law. Today, you have a choice of deducting your actual expenses, for interest, taxes, charitable contributions, etc., or of taking instead a standard deduction equal to 10 per cent of your adjusted gross income, but not more than \$1,000. The 1963 tax bill would leave this \$1,000 ceiling unchanged but would create a new floor or minimum which easily could be higher than 10 per cent of your adjusted gross income.

Beginning in 1964, if you are a married person filing a joint return or an unmarried person filing your own return, you would be entitled to a minimum standard deduction of \$200 plus \$100 more for every personal exemption on the return, including the exemptions for a husband, wife, any dependents, and old age and blindness.

Say Smith is a 66-year-old married man with three dependent children and he files a joint return with his 60-year-old wife. His adjusted gross income is \$6,000 and his personal deductions come to \$650. Under today's rules, Smith would choose the \$650 deduction of actual expenses instead of the \$600 standard deduction (10 per cent of his adjusted gross income).

If the 1963 bill becomes law, Smith in 1964 would be entitled to a new minimum standard deduction of \$800 (\$200 plus \$100 for his own exemption, another for being 65 or over, another for his wife and one each for his three dependent children). This change alone would save him the taxes he otherwise would have paid on \$150. Next: Juicy tax cut for small corporations.
