ARMIES CLOSE IN.

LOSS OF KINCHOU CONFIRMED.

General Sakharoff Sends Account to the General Staff.

St. Petersburg, July 13 .- Licutenant Gneral Sakaharoff in a dispatch to the general staff, confirms the report of the Japanese occupation of Kaichou. He says that the Russian loss did not exceed 150 killed or wounded. General Sakharoff adds that they are on the Yinkow road.

"Our detachment remained during July 8 at Kaichou station, having its advance posts on the right bank of the Kantkhe river, the enemy occupying the heights on the left bank and fortifying themselves thereon," says General Sakharoff. Our battery on the river bridge opened fire at the enemy's patrol which appeared in Kantakhe village. Toward noon a fusilade occurred between a detachment of the enemy and our company, which observed the enemy returing. Our losses were six wounded.

"Toward the evening of July 8 the enemy's force, consisting of four di-Chicago. Today was the annual picnic along the seashore. the market for those grades of ber suitable for the purpose.

Water Before Feeding.

Horses should be watered before their grain feed. This story has been put to the experimental test. A horse was fed with four quarts of whole oats, and immediately after given water to drink. Soon after the horse was killed and opened. Scarcely a quart of oats was found swimming in the water in the stomach, the remaining three quarts having been forced by the water into the intestines.

Another horse was given water first. and then about four quarts of oats. Fifteen minutes after this horse was slaughtered, and the entire quantity of oats was found in the stomach, and already digestion was setting in. desired. A plan for doing this is shown Horses require more water in hot weather than in cold, and more when at work than when idle. Horses at manger to the end of the stall. The full work should be watered frequentpost of this gate at the end is made ly; three times a day is not too often. about a foot longer than the lower The hay and grain should always be pure and sweet.

Care of Horses' Necks.

Nine out of every ten farm horses suffer from abrasions of the skin on the neck during the spring work and this is so severe in many cases as to keep the horse from doing a full day's work. Try this plan of treating the farm horse during the season of hard work. After feeding the horse brush off or, better still, wipe it off with a large cloth. Then, with tepid water, sponge the head, neck and shoulders and wipe dry with a clean cloth.

If the shoulders show indications of soreness rub over them a little vaseline and let it remain over night. See that the collar worn fits well and after taking it off wipe it thoroughly with a damp cloth and hnng it where it will be thoroughly dry in the morning. It will pay well to take this little additional care of the horse during the working season if at no other time. -Indianapolis News.

Grain Feeding.

In some observations recently made in the feeding of grain to lambs, one of the most noticeable results was the early maturity of those that had grain from birth. For instance, in one trial the lambs fed with grain from birth attained an average weight of 113 pounds seven weeks earlier than those that had had no grain previous to fattening, and this weight was reached at a smaller cost in the instance of the lambs fed on grain from the start, It is a hard matter to estimate the amount of grain to feed, owing to the variation in the consuming capacity of sheep. In starting it has been customary to feed from balf a pound to one pound. A month later the wethers will probably be taking from one to two pounds, and during the last month from two to three.--American Cultiva-

This being the case the best way to use it is to watch the plants closely as they grow and if any shows lack of vigor sprinkle a teaspoonful of the nitrate of soda about the plant. Usually one application will be sufficient to start such plants off in good shape and once they get a good start there will be no trouble if the soil has been properly enriched and proper cultivation has been carried on.

Best Food for Fattening-Lambs.

Very careful experiments at the Ontario Agricultural College have shown that an even mixture of peas and oats made the most profit in feeding lambs. Peas alone make the most gain, but at a somewhat greater cost of feed. Corn and peas made a slightly smalconvenience of procuring the feed is the largest element in the case. As peas and oats may be grown together very conveniently and cheaply, this crop secures some advantages over others which may give it a preference

Thrifty Melons.

in this regard.

Sow melons in a light rich soil; poulbelonging to the Belgian courts will be try manure produces rapid growth. If the season is very warm and moist the vines may need to be pinched back to secure early fruiting. Musk-melons require a season of about three and onehalf months and watermelons about four and one-half months, hence the crop is rather uncertain in this latitude. The crop is made more sure if transplanted when they begin to run

Six Days Enough.

I have been observing things for many years and I never knew a man to prosper who habitually worked on Sunday. Some men will spend a day or two in town during the week and then they will feel that they are so far behind that they must plant corn on Sunday to catch up. The man who gets a dollar by fraud will lose it and another with it. The man who gains by laboring on Sunday may make the temporary worldly gains, but will lose that which is infinitely more valuable to him than all of this world's goods. -Cor. Iowa Homestead.

Field Beans and Soy Beans.

The average results for six years at the Ontario station show that the following varieties of field beans have given the highest yields: White Wonder, Day Improved Leafless, Medium or Navy, Pearce Improved Tree and Schofield Pea. Based on the experiments with soy beaus at the college, the Early Yellow is recommended for the production of grain for feed, and the Medium Green for enslling with corn.

Horses or Steam Wagons.

A firm of English millers have made an interesting test of the comparative cost of hauling grain by horses or by steam motors. The cost of keeping seven horses for the year was about \$2,500. At the end of 1902 they sold the horses and purchased a five-ton steam machine, ran it 5,275 mlles, carried 3,875 tons, and burned 411/2 tons ler gain than the other feeds. But of coal at a total cost of \$1,849, showthe difference was so small that the ing a decided gain for the steam machine.

Farm Notes.

Keep all young animals growing and gaining.

Avoid working horses in the rain as much as possible.

Ground feed is better than whole grain for growing colts.

Sweet food for hogs is better than that which is fermented and soured. All rubbish and prunings from the

garden and orchard should be burned. A failing appetite is generally the first indication of an animal being out of condition.

Coal ashes, as well as wood ashes, should be saved and applied on wet. heavy soils.

Conveniences for watering and feeding stock are items in saving time, labor and feed on the farm.

Corn and oats, half of each, ground together, make one of the best kinds of feed for cows in milk.

The best way to get rid of the currant worm is to dust the leaves with white hellebore.

In nearly all cases, the best animals are the offspring of mature parents on both sides.

Be ready to cut clover when the largest number of plants are in bloom and are turning brown.

It should be the aim of every breeder of horses to raise well-bred and well-trained animals.

In the management of clover for hay it is important not to cure too dry, and to store under shelter.

On many farms, exposure to the weather injures farm machinery fully as much. if not more, than use.

The offspring of immature, undeveloped animals is inferior to that of matured and full-grown parents.

It is the steady, quiet horse that can do the biggest day's work when the use of soft wood is likely to improve | weather is extremely hot .-- Pointers.
