A party of nine young men from the fishing camp of Kallish & Dunning made a voyage to The Dalles last Saturday in Harry Hansberry's sail boat, the Sea Gull. They left the island at 8 o'clock in the morning and arrived at The Dalles at 11:30. Returning, they left The Dalles at 2:30 and arrived here at 4:30 p. m. The boat was rigged with three sails, a mainsail, topsail and stensail, crossing the river 24 times. The wind was strong up stream, the waves rolled over the gunwales, driving the spray as high as the topmast sails, and the boys were all as wet as if they had gone fishing on Sunday.

Our devil has gone to pack strawberries, to make a raise, and the editor is left to get out the paper. If the present number is not up to the average, typographically or editorially, our readers will know who to blame—that is, they can take their choice and blame either the editor or the devil.

The river at this point raised seven inches for the 24 hours ending at 7 o'clock yesterday morning. Reports from the upper county state that both the Columbia and Snake rivers are rising. The cool weather for a few days last week and the first part of this checked the rise of the rivers, but the present warm spell of weather will cause the snow to melt and the rivers to boom.

Mr. George C. Jones returned Wednesday from a trip to the headwaters of the Clackamas river, where he went to inspect a body of timber that is offered for sale by Portland parties. His party was equipped with a photographic outfit which was carried on a mule. They secured some fine views of the timber, which Mr. Jones says is the best he has seen anywhere on the coast.

Be sure and attend the meeting next Monday, at 7 o'clock p. m., to arrange for a 4th of July celebration. London Purple

Is chiefly arsenite of lime, a residue obtained in the manufacture of aniline dyes. It does not contain quite so much arsenic as Paris green, and by being a by-product, it is not so constant in its constitution. According to an analysis by the chemist of the U. S. department of agriculture, it has 43 per cent arsenous oxide. A later analysis by the chemist of the Vermont agricultural experiment station, it has

Arsenic (arsenous ox.) parts	46.78
Lime	25.25
Iron and alumina	1.31
Sulphuric acid	.45
Moisture	1.25
Nitrogen	1.25

Paris green and London purple are both dangerous poisons and are particularly in the province of the pharmacist, for he is the only person retailer and usually the he is only having the facilities for guaranteeing their quality. We keep only the best qualities.

Paris Green

Is chiefly arsenite of copper. The insecticide efficiency of Paris green depends upon the amount of arsenous acid present, which is somewhat variable, ranging from 54 to 61 per cent in the analysis of five samples obtained in the market. The chemist of the Maine state college found 54, 55, 54, 55 and 49 per cent of arsenous acid respectively. It is a very stable compound, does not readily suffer deterioration and may be safely kept in ordinary containers, in a cool, dry place.
