FRIDAY, NOVEMBER 2, 1900.

Before another issue of the Glacier the presidential campaign of 1900 will have passed into history and the result of the election will be known. Although here in Oregon and on the Pacific coast generally the campaign throughout has been a tame affair, in the doubtful states of the East the battle has been hotly contested. New York, Indiana and Illinois have been invaded by armies of speakers. Col. Bryan has been touring these states and others, making fifteen and twenty speeches a day, since the Kansas City convention. Gov. Roosevelt and Chairman Hanna have followed on Bryan's trail. Crowds gather at every railroad station to see and hear the spell-binders and cheer their favorites. Both sides seem confident of victory. The most extravagant claims are made by the managers of both the great parties. Democrats are about the great parties of the great parties. Democrats are about the great parties. Democrats are about the great parties. Democrats are about the great parties of the great parties. Democrats are about the great parties of the great parties. Democrats are about the great parties of the great parties of the great parties. Democrats are great parties of the great parties of the great parties. Democrats are great parties of the great parties of the great parties and parties of the great parties of the great parties Before another issue of the Glacier both the great parties. Democrats are claiming states like Ohio, Illinois and Wisconsin, while republicans claim every Northern state, Maryland, West Virginia and Kentucky, and say Missouri is doubtful. The vote may be close, or there may be a landslide one of the orchard into stovewood and sow alfalfa and let the remaining portion be well fertilized, than to continue the policy of taking from the soil "all it will bear" and returning almost suppose that this high egg record can be sustained except at the expense of health, and it is questionable if it will pay to take such a risk.—Pacific Fruit World.

Baby Carriage.

A baby carriage, in good repair, for sale by close, or there may be a landslide one of the orchard into stovewood of the breeds to a point where she will lay 200 eggs in a year is surely going to injure her body more or less. In other words, it does not seem reasonable to suppose that this high egg record can be sustained except at the expense of health, and it is questionable if it will pay to take such a risk.—Pacific Fruit World.

A baby carriage, in good repair, for sale by fall the breeds to a point where she will lay 200 eggs in a year is surely going to injure her body more or less. In other words, it does not seem reasonable to suppose that this high egg record can be sustained except at the expense of health, and it is questionable if it will pay to take such a risk.—Pacific Fruit World.

Baby Carriage.

A baby carriage, in good repair, for sale by fall the breeds to a point where she will be a point wh close, or there may be a landslide one way or the other. There seems to be about as much changing from one party to another on the questions of this campaign as there was in 1896. The expansionists and the anti-imperialists humus, it loosens and separates the soil are the unknown quantity. It is hard particles. Properly composted it is of the flower which side is the largest gainer use mainly as a direct and indirect nitroto figure which side is the largest gainer to figure which side is the largest gainer genous food, and with it should be used or loser by the questions arising out of both phosphoric acid and potash. the war with Spain. Forecasts by politicians and gamblers are not reliable in this election. The man who places a bet for either side to win can not be charged with betting on a sure thing.

There is nothing better for most fruits than good stable manure, says H. E. Van Denan in Farm and Ranch. However, there are some strawberry growers who would not thank any one to haul it upon their plantations for that fruit. They claim that it makes the berries soft and too tender to ship well. This soft and too tender to ship well. This may be true in some cases, and yet there are more strawberry fields starving for the lack of stable manure than there are those injured by too much. One of our largest and best peach growers claims that he never wants a load of stable manure hauled into his orchards, feeling sure that it would hurt his crop. He prefers commercial fertilizers and soiling crops. On the other hand, I know several good peach growers, judging by their crops of large, delicions fruit, that want all they can get of it. One farm that I know had about 40 carloads applied during one fall, and the succeeding crop paid for it, and much more.

Stable manure is good for apple or-

more.

Stable manure is good for apple orchards, vineyards and all kinds of berry patches, if applied wisely. There is more danger of getting on too little than too much, although this, as well as most other good things, can be overdone. The main difficulty is in not having enough to go around. If large amounts of stable manure are used, it is best to supplement it by adding an ample amount of sulphate of potash, and also acid shosphate or dissolved bone. This is for the reason that stable manure contains an excess of nitrogen, as compared with

thing to do, there is no form in which it will act so quickly and in which it may be had as cheaply as nitrate of soda. This, however, should be put on shortly before it is expected to be taken up by plants or trees, for it is very soluble and easily lost if not soon appropriated by the growing crop. It is well to make at least two applications in one season—one in the early part and one later, when the growth is almost at its height. It means a remarkably vigorous growth. Nitrate of soda should not be put on land in the winter because it would be largely lost in the drainage water before largely lost in the drainage water before

chanted forms are little more included. See all by Williams & is unequalled. For sale by Williams & is unequ

soiling crops, will be found very economical, and, therefore, profitable.

The everpresent question of fertilizing is becoming gradually simplified. There is a vast deal of nonsense being written about breeds of fowls that will average 200 eggs each year. As shown in this department some weeks since, to accomplish this some being would have to sift it all down and extract the good. Frof Van Deman has presented would have to law 250 eggs a year to

Stable manure should be roofed over, frequently turned, and wet down sufficiently to keep it decaying without burning. Then it is very valuable, but it should not be spread on the land until after the rains begin. Used in the usual way it is of no more use than straw; its action on the land is mechanical, and, as humus, it loosens and separates the soil burnus, it loosens and separates the soil

U. S. Jary List.

The first grand jury list for the exclusive use of the United States circuit court has been selected, and on it are charged with betting on a sure thing.

The wise man will not bet, nor will he stay up all night to learn who is elected. He will retire early next Tuesday night, feeling that the country is safe no matter which party wins, and trust to the election boards and the daily newspapers to give him the news.

Orchard Fertilizers.

court has been selected, and on it are the names of 1,000 taxpayers and representative citizens of the state of Oregon who may be called upon some time to act as jurors. The list is expected to last several years, and it may be some time before the jurors' names who appear will be drawn from the jury box. The editor of the Glacier has the distinguished honor of being the only newspaper man in the list of 1,000 names. Orchard Fertilizers.

Some of our contemporaries profess to think it strange that an editor's name should be found in a jury list, but their

sulphate of potash, and also acid phosphate or dissolved bone. This is for the reason that stable manure contains an excess of nitrogen, as compared with phosphoric acid and potash; in other words, it is not a well balanced fertilizer. If stable manure be used exclusively, it is liable to produce too much wood and too little fruit. The plan of using commercial fertilizers and soiling crops as a substitute for stable manure is a very good one, and has been adopted by many farmers and fruit growers.

If the clovers and field peas, etc., are grown and plowed under, they will add a large quantity of nitrogen, having taken it from the air. This is a great gain, because nitrogen is the most costly ingredient in any manure. These crops, also add that important item we call humus, which is decayed vegetation, and is one of the most valuable things putinto the soil by stable manure.

If nitrogen is to be added in commercial form, which is often a very wise thing to do, there is no form in which it will act so quickly and in which it way he had as cheenly as nitrate of so-

ion: First soak the corn or bunion in largely lost in the drainage water before the time for crops to take it up.

Phosphoric acid is another necessary part of any complete manure, and should be used in growing soiling crops or directly upon the orchards, vineyards, berry fields, etc. It is found abundantly in bones and phosphate rock. The dissolved forms are far more available than those which are merely ground or crushed. There is a small proportion of it in wood ashes.

The Companion for the Rest of 1900. Every issue of the Youth's Companion for the nine weeks of November and December will be enlarged, and the holiday numbers will be double the usual size, with richly-decorated covers. From now until the end of the year the Companion will be crowded with articles and stories sufficiently varied to please every taste in both old and young—men and women, boys and girls. Among the contributors announced for early issues are Sir Henry Stanley, Rider Haggard, Walter Camp, Frank R. Stockton, Dean Farrar, Ian Maclaren and Victor Maurel; in addition to which there will be short in addition to which there will be short stories by Margaret Deland, Elizabeth Stuart Phelps Ward, Bliss Perry, Charles W. Chestnutt and other writers of delightful fiction.

Those who subscribe now for 1901 will

Barrett School Report.

Following is a report of the Barrett school for month of October, 1900:

It edited expressly for every state and territory. The news of the world so arranged that busy people can more easily comprehend than by reading cumber. Grammar Department—Number enrolled, 36; whole number of days' attendance, 579; number days absent, 7;
number times late, 1; average number
pupils belonging, 29; average daily attendance, 29.

Primary Department — Number enrolled, 35; number days attendance, 544;
number days absent, 44; number times
late, 6; average number pupils belongitendance, 29.

Order of days' attendance, 29.

Primary Department — Number enrolled, 35; number days attendance, 544;
number days absent, 44; number times
late, 6; average number pupils belongitendance, 29. circulated in all parts of the United States. In addition to the news, the Blade publishes short and serial stories and many departments of matter suited to every member of the family. Only \$1 a year. Write for specimen copy. Ad-dress the Blade, Toledo, Ohio.

A Village Blacksmith Saved his Little Son's Life.

Mr. H.H.Black, the well-known village blacksmith at Grahamsville, Sullivan Co., N. Y., says: "Our little son, five years old, has been subject to croup, and so bad have the attacks been that we have feared many times that he would die. We have had the doctor and used many medicines, but Chamberlain's Cough Remedy is now our sole reliance. It seems to dissolve the tough mucus and by giving frequent doses when the and by giving frequent doses when the croupy symptoms appear we have found that the dreaded croup is cured before it gets settled," There is no danger in giving this remedy for it contains no opium or other injurious drug and may be given as confidently to a babe as to an adult. For sale by Williams & Brosius.

[Timber Land, Act June 3, 1878.]
NOTICE FOR PUBLICATION.

United States Land Office, Vancouver, Wash., Sept. 4, 1900.—Notice is hereby given that in compliance with the provisions of the act of congress of June 3, 1878, entitled "An act for the sale of timber lands in the states of California, Oregon, Nevada and Washington territory," as extended to all the public land states by act of August 4, 1822, WILHELM STADELMANN,

WILHELM STADELMANN,

Of Trout Lake, county of Klickitat, state of Washington, has this day filed in this office his sworn statement No. 20%, for the purchase of the east 3/2 northeast 3/4 and northeast 3/4 southeast 3/4 section 20, township No. 6 north, rango No. 10 cast, and will offer proof to show that the land sought is more valuable for its timber or stone than for agricultural purposes, and to establish his claim to said land before the Register and Receiver of this office at Vancouver, Wash., on Tuesday, the 20th day of November, 1900.

He names as witnesses: Jacob Hickman, Julius C. Hoke, Rush Sellinger and Charles H. Kittenburg, all of Trout Lake, Wash.

Any and all persons claiming adversely the above-described lands are requested to flie their claims in this office on or before said 20th day of November, 1900.

[Timber Land, Act June 3, 1878.]

U.W. hall in Hood Hiver, on Monday, Nov. 19, 1900, at 10 o'clock a. m. Election of a board of directors and other business will be transacted. H. H. BAILEY, Secretary.

[Timber Land, Act June 3, 1878.] NOTICE FOR PUBLICATION.

ballymple says there are about a hundred of them on the tree.—Dalles are accumulating, for it absorbs much of the nitrogen, which would otherwise evaporate and be lost in the air. All of these forms of potash should be applied some weeks ormonthable for they are expected to show their effects upon the crops. For fruit in particular, it is probably best to use suithate of potash, because the sulphate produces a better quality of potash, hecause the sulphate produces a better quality of potash, increasing the sweetness of the fruit, and its cost is not very much higher than that of muricate of potash.

Potash and phosphoric acid are never lost by evaporation or through drainage, but remain in the coarse manure with which they are mixed, or in other forms, in the soil, until taken up by the crops. Nitrogen is lost in both these ways and should be very wisely used. To use any or all of these fertilizers directly on them through a should be very wisely used. To use any or all of these fertilizers directly on them through.
