WHERE SAN JOSE SCALE GOT ITS NAME An Ohio man married six sisters consecutively, by which be reduced the mother-in-law peril to a minimum. All problems will be solved some day, or reduced to a safe minimum.

The San Jose scale is known to be of Chinese origin, says C. L. Marlatt, of the United States department of agriculture, in a bulletin on the insect just published Its first point of colonization in American States. colonization in America was in San Jose, Cal., in the grounds of James Lick. Mr. Lick was a great lover of plants and imported trees and shrubs for the ornamentation of his grounds from foreign countries and it was in his orchard that the scale first appear ed. By 1873 it had spread to neighboring orchards. It had extended as far west as San Francisco by 1883 and reached important fruit districts in southern California in 1886 and 1887. It had already slowly extended its range on the Pacific coast and in the range on the Pacific coast and in the states west of the Rocky mountains, including Califor ia, Oregon, Washington and Idaho on the north and Nevada, Arizona and New Mexico on the south. From the early 90's it had penetrated into British Columbia. By the and of August, 1894, the scale was known in Florida, Vinginia, Marviand. Indiana. Pennsylvania, New ryland, Indiana, Pennsylvania, Ne.s. Jersey and New York.

In capacity for harm the San Jose scale probably exceeds any other scale insect known, and it attacks practi-cally all, both those grown for fruit and the ornamentals. Its economic

of control and particularly the lime and sulphur wash, has been demonstrated. In the case of certain fruits as, for example, the peach, it has been found that the lime and sulphur band.

every good sheep killed means the loss of a \$5 piece.

Over in the Butter creek country it is said that it is not an uncommon sight to see 10 or 12 coyotes in a band. wash has a very great value as fungicide, so much so that some growers
are recommending its use whether the
San Jose scale be present in the orchard or not. Furthermore, the preseuce of this beale has led to much
more careful methods on the part of
the nurserymen and in the planting
and care, thus raising the standard
and giving intelligent and conscientious, painstaking growers a distinct
advantage over their careless neighbors. The necessity of annual spraybors. The necessity of annual spraying of the trees is now clearly shown.
With the exception of a few hours of much attenti ing of the trees is now clearly shown. Since the bounty was taken off With the exception of a few hours of active larvel existence and an equally brief winged existence in the case of they have increased rapidly.—Heppthe mature male, the life round of ner Gazette. this insect is passed under the protection of a waxy scale. This scale covering conceals the real insect beneath. The winter is passed by the insect in a half grown condition un and happy thoughts. Sold by Keir & der small, black protecting scales, mere points, just visible to the naked
