If we will study nature a little, we shall find that the cherry is first in bloom, first to fruit; and is all picked and marketed by July 10. The tree has borne its fruit; it has made its growth; the laterals have grown to their full length; the fruit buds are setting for next year's crop. Nature has performed her work so far as the cherry tree is concerned, and should rest until another year ha; come, when she will take up the same routine again. So, if we keep on cultivating and forcing the growth of the tree after it has fulfilled its duty, it is sure to brin disaster and ruin.

Now, a great many think all they have to do is to plant the tree and sit down and watch it grow, then pick the fruit—yes—but that is not the process that brings the best returns. It is not the kind that brings home the premiums from the horticultural fairs, where men of knowledge and experience judge the merits of the fruits and quality is the only consideration.
