MEMORY OF SAVAGES.

Wonderful Feats of the Zulus in Conveying Verbal Messages.

The memory in savage or uncivilized peoples is often trained to a degree very surprising to those civilized men and women who have grown used to depending on the written word more than on the remembered word.

The transmission of whole epics, like the "Iliad," by word of mouth no longer seems so incredible when you read of the feats of memory of which present day Zulus are capable.

These people, says Mr. Gibson in "The Story of the Zulus," have no writing and are accustomed to transmit messages and record events by memory alone. This they can do because their mental impressions are made especially distinct by reason of their acquired or inherited habit of giving undivided attention to the subject in hand.

Communications between the British authorities and the Zulu kings were almost invariably conducted by means of verbal messages carried by natives.

A certain ultimatum addressed by the British to Cetshwayo was conveyed to him, not upon paper, but in the brain cells of the messengers whom he had sent eighty miles to receive it from the British commissioners.

Although the document contained some 4,000 words and was accompanied by much comment on the state of things it was desired to remedy, the whole was repeated to Cetshwayo with perfect accuracy.

MOVING PICTURES.

Why They Sometimes Show Wheels Turning the Wrong Way.

Every one must have noticed that in moving pictures the wheels of carriages or automobiles often seem to be turning backward instead of forward. One puzzled person wrote to the Scientific American asking why, and this is that paper's answer:

In taking a moving picture there are perhaps sixteen exposures made each second. If now the spokes of a wheel of a carriage move with a speed so that the spokes are in the same position at each exposure, that wheel will seem to stand still in the picture.

If the wheel is moving slower, then the spokes will be seen farther back in the successive views, and the wheel will seem to turn backward while it will seem to turn forward when the spokes move fast enough to occupy positions further forward in each exposure.

It is a matter of the interruption of the exposure and the motion of the wheel. If there are sixteen exposures and the wheel turns through the space between two spokes in one-sixteenth of a second the wheel would be in the same position at each successive exposure and so would not seem to move at all.

Matrimonial.

Three Germans were sitting at lunch recently and were overheard discussing the second marriage of a notable friend when one of them remarked: "I'll tell you what. A man who marries a second time don't deserve to have his first wife."—Life.
