

Do You Read Labels?

Domestic science teachers and food authorities are urging the housewife to carefully read the labels on all food articles.

The laws of most States compel food manufacturers to print the ingredients of their products on the label, and this enables consumers to distinguish healthful foods from those which may be deleterious.

High-grade baking powders are made of pure cream of tartar, derived from grapes. Royal Baking Powder is a type of the highest grade. It is healthful beyond a doubt and the safest and best to use.

The low-grade baking powders are made from alum, a mineral acid salt, or phosphate of lime.

Consumers can learn the character of the baking powder by referring to the label, which must state whether the contents include cream of tartar, alum or phosphate.
