Calyx Spray Soon Due

(By Leroy Childs)

The calyx application for control of codling moth and apple scab should be applied as soon as the petals fall. In the lower sections of the valley the correct time for making this application will be the latter part of the present week or the first of next. The calyx application is extremely important if worms are to be controlled. The spray must be applied before the calyx cups close in order to be effective. Be sure the tops of the trees are well sprayed; waste a little spray if necessary. Use lime-sulfur 1-35 plus arsenate of lead 2-100 (paste 4-100).
