

**THE NEW  
United States Disc Separator**

"Has the gears  
That last more years."

The all enclosed, medium sized gears, with bearings on both sides, running constantly in a spray of oil furnished by a single oil cup, and reduced crank speed, insures freedom from dust and grit, equal distribution of gear strain, and easy running, consequently long wearing qualities and minimum expense for repairs.

The new perfected, self-adjusting bowl with interchangeable discs of unsurpassed skimming qualities and easy to care for, is the most important feature in the new United States Separator.

These and other improvements will be fully explained in a free demonstration to all interested dairymen.

**STANDARD GRADING  
LAW IS ADOPTED**

An Oregon law, adopted by the legislature last winter and effective on May 25, provides for five regular standard grades of apples: Extra fancy or blue grade, fancy or red grade, C-grade, combination and orchard run. The full text of the law follows:

Extra Fancy or "Blue" Grade—Extra fancy apples are defined as sound, mature, clean, hand-picked, well-formed apples only, free from all insect pests, diseases, blemishes, bruises and other physical injuries, spray burns, limb rub, visible water core, skin punctures, or skin broken at the stem; but characteristic russetting at the stem end will be permitted.

Fancy or "Red" Grade—Fancy apples are defined as apples complying with the standard of extra fancy grade, except that slight leaf rubs, scratches, or russetting shall be permitted up to a total of 10 per cent of the surface; and provided, that scab spots not larger than one quarter of an inch in diameter in the aggregate shall be permitted in this grade. Orchard run apples may be permitted in apples otherwise meeting with extra fancy requirements.

C-Grade—C-grade apples shall consist of sound, mature, hand-picked apples which are practically free from infection, bruising or broken skin and which are not badly misshapen; provided that two healed worm stings, slight sun scald and scab up to a total of one-half inch in diameter shall be permitted in this grade, and the blemishes allowed in the fancy grade.

Combination Grade—When extra fancy and fancy apples are packed together, the boxes must be marked, "combination extra fancy and fancy." When fancy and C-grade are packed together the boxes must be marked, "combination fancy and C-grade." Combination grades must contain at least 25 per cent of apples which are of such grade as would be permitted in higher grades. None of the higher grade apples shall be sorted out of any lot and the remainder marked as combination grade.

Orchard Run—When extra fancy, fancy and C-grade are packed together, the boxes must be marked, "orchard run," but orchard run apples must not contain any fruit that will not meet the requirements of C-grade. None of the higher apples shall be sorted out of any lot and the remainder marked, "orchard run."

Unclassified—All firm apples which are practically free from infection but which do not conform to the foregoing specification of grade, or if containing worm holes will not be permitted. This grade must be plainly marked with the word, "unclassified," and so branded; provided that no restriction shall be placed upon the number of worm stings admitted. Open worm holes will not be permitted. This grade must be plainly marked with the word, "unclassified."

Color requirements call for 75 per cent for extra fancy for all red varieties except Jonathans and McIntosh Reds, which call for 65 per cent. Twenty five per cent are required for all fancies of red varieties. Color specifications are less severe on striped or partial red varieties.

The law calls for two standard grades of pears, extra fancy or "blue" and fancy or "red." The standard Oregon pear box shall have the following inside dimensions: 8 1/2 inches deep, 18 inches long, 11 inches wide. Every box must have marked plainly on it the grade and name of variety contained or else the word, "Unknown." It must also carry the name of the grower, place where grown, net weight and number of pears contained in the box. If the fruit is shipped through an association or shippers, his name may be used instead of that of the grower. Packed boxes must weigh not less than 42 pounds, except Winter Nellis, which must weigh at least 40 pounds.

Specifications of pear grades are as follows:  
Extra Fancy Grade—This grade shall consist of pears that are mature, hand-picked, clean sound and free from insect pests, sun scald, scab, scale or other disease, worm holes, stings, broken skins, bruises or evidence of frost, russetting, rough handling or other serious defect. Russetting covering a total area not to exceed one inch in diameter may be admitted, and also those varieties which are naturally russeted more or less. In the case of Winter Nellis or Bosc varieties, same grading will apply, except that natural russetting is desirable and required. Slightly misshapen or slightly rubbed fruit may be admitted to this grade.

Fancy Grade—This grade shall consist of all fruit which does not meet the requirements of the extra fancy grade as to blemishes and deformities but which in every way is sound and merchantable and free from disease. Scab to a total area of one half inch in diameter, and not to exceed two worm stings healed thoroughly shall be permitted in this grade.

Packing—The term, "properly packed," shall refer to the arrangement and the amount of pears in each box. Pears to be properly packed shall be arranged in the box according to approved and recognized methods, and all boxes shall be tightly filled but the contents not to show excessive or unnecessary bruising as result of the pressure in lidding the box. Pears may be packed in half boxes if so desired, boxes to be of the same dimension but one half the depth of the standard boxes.

Growing and shipping of apples and pears under the Oregon standard rules are not compulsory, but any individual or association desiring to ship under the rules, may upon application to the state board of horticulture have the fruit inspected and certified that it has been graded and packed in accordance with the law. The cost of inspection shall be paid by the shipper.

Tunnel Parking Places Needed

Motor visitors, who express a wish to make a close inspection by foot of the districts around Mitchell's Point tunnel and the Twin tunnels, the latter between here and Mosier, on the Highway, are voicing the need for parking places in the neighborhood of the scenic points. It is declared that one cannot now park within walking distance of the two places of attraction without violating traffic ordinances, and as a result but few are able to make the most of walks around the tunnels and the footpaths cut in the gorge outside their windows.

Whooping Cough

This is a very dangerous disease, particularly to children under five years of age, but when no paregoric, codeine or other opiate is given, is easily cured by giving Chamberlain's Cough Remedy. Most people believe that it must run its course, not knowing that the time is very much shortened and that there is little danger from the disease when this remedy is given. It has been used in many epidemics of whooping cough, with pronounced success. It is safe and pleasant to take.

**Read  
your instruction book  
It says—**

Old oil should be drained from the crankcase at regular intervals and replaced with fresh oil.

This statement is made because engine operation causes road dust, carbon, fine metal particles and other impurities to accumulate in the crankcase oil. The gritty oil circulates through the engine, impairing its performance, and ultimately leads to rapid depreciation and repairs.

These careful instructions from the manufacturer are often disregarded; cleaning the crankcase is a job generally disliked.

To meet this need Modern Crankcase Cleaning Service has been established by first-class garages and other dealers co-operating with the Standard Oil Company. These garages and dealers use Calol Flushing Oil, the scientific agent that cleans out old oil, dirt, grit and other impurities and does not impair the lubricating efficiency of fresh oil used. The cleaned crankcase is refilled with the proper grade of Zerolene.

Look for the garage or dealer displaying the sign shown below,—it means "Better operation and longer engine life."
