

Don't Neglect Your Floors

It's fun to paint or varnish them yourself—easy too

FLOORS that have a good finish do not get scarred and worn, the finish takes the wear. Well finished floors always look better, too.

If your floors need refinishing and you can't get a painter to do the work, refinish them yourself. You can do it easily—it's really fun.

Our "Home Service Paint Department" was organized just to help women refinish things about the home. Write for free advice, telling us what you want to refinish and how you want it to look.

Our experts will explain every step of the work and recommend the right materials, brushes, etc. There are special Fuller Paints, Varnishes, Enamels, Wall

Finishes and Stains for you to use. They are the best products of their kind that we know and we have been making such products for 73 years.

Take advantage of Fuller's Free Advice and Fuller's Products in beautifying your home. The results will surprise you. The work will fascinate you.

Fifteen-for-Floors

Fifteen-for-Floors Varnish. This varnish is especially for beauty of finish, durability and ease of application. Boiling furniture, boiling water, hot mops, everyday wear and tear have no effect on this floor, elastic and durable finish.

Fuller's Home Service Paints

Manufactured by W. P. Fuller & Co., Dept. 41, San Francisco. Branches in 19 Cities in the West.

Emery Lumber & Fuel Co., R. J. McLean & Co., Parkdale.

WASCO COUNTY HAS POLLENIZING TESTS

Experiments of the Oregon Experiment Station in pollenization of cherries, conducted the past spring, have directed the eyes of cherry growers in all parts of the Pacific Coast to the Dalles, where the experts worked. Data of inestimable value was gathered. Prof. Schuster had charge of the experiments. He says he will require another year before making his announcements definite.

The experiments have brought out one fact strongly—that Bing, Lambert and Royal Ann cherries are both self-sterile and inter-sterile. Out of 3,713 blossoms of these varieties tested for self-sterility, the setting of only one-half of one per cent was obtained.

The first stage of the experiments in blossoming time, was emasculation of the blossoms except the pistils, which were pollenized by hand with camel's hair brushes. A total of 45,000 individual blossoms was treated in this way. After treating, the experts enclosed the blossoms in paper bags, and allowed them so to remain until the fruit had set. Tests for determining inter-sterility on the three principal commercial varieties of cherries showed fertilization of but four-tenths of one per cent.

Prof. Schuster then set out two dozen what varieties would be best suited in orchards of Bings, Lamberts and Royal Anns for fertilizing the blossoms and bringing about a set of fruit. Pollen from every known variety and a number of seedlings were used. The data given below shows the results obtained by Prof. Schuster. In this table the variety pollenized is listed at the top followed by the variety used as pollenizer in groups with the percentage of fertility for all cherries listed at the head:

Lambert—Up to 16 per cent. Early Richmond (Kentish), May Duke, Royal Ann, Elton, Royal Ann Seedling; 17 to 32 per cent. Montmorency, Governor Wood; 33 to 45 per cent. Black Tartarian, Norma, Centennial, Black Republican, Waterhouse and Early Rose; 46 to 64 per cent. Early Purple, Black Oregon, Elton, Coe and Major Francis. Royal Ann—Up to 10 per cent. Early Richmond, May Duke, Elton, Royal Ann Seedling, Bing and Lambert; 11 to 20 per cent. Early Purple, Black Tartarian, Waterhouse, Montmorency; 21 to 30 per cent. Early Rose, Governor Wood, Centennial, Elton, Major Francis and Black Oregon; 31 to 40.5 per cent. Black Republican, Coe and Norma.

Bing—Up to 10 per cent. Early Richmond, May Duke, Elton, Royal Ann Seedling, Lambert, Royal Ann, Early Purple, Waterhouse, Montmorency and Black Republican; 11 to 20 per cent. Black Oregon, Coe and Major Francis; 21 to 30 per cent. Early Rose, Governor Wood and Centennial; 31 to 40 per cent. Norma, Black Tartarian and Elton.

Briefly summarized, the Norma, a seedling, and the Coe gave the best results in both the Royal Ann and Lambert divisions. The Elton was first as a pollenizer for the Bing and Lambert divisions and pollenized from 21 to 30 per cent in the Royal Ann division. Black Republicans, highly prized as pollenizers because of their marketability were in the 31 to 40.5 class for Royal Anns and 33 to 45 for Lamberts, but they were in the 0 to 10 per cent class for Bings.

Prof. Schuster emphasized that accident may have rendered the findings inaccurate and declared that a further year's checking would be necessary for verification. He emphasized that seasonal changes might have an effect and that later experiments might prove that, to have a bumper crop each year, it would be necessary to have pollenizing trees of several varieties.

"The horticultural bureau of The Dalles Chamber of Commerce aided with financing the recent experiments."

30 AT WORK ON LOST LAKE ROAD

W. A. Langille, in charge of work on the Lost Lake road, a portion of which is being reconstructed jointly by the city and county, and links of which, located entirely in the bounds of the Oregon National Forest, will be surfaced this year, was here Saturday securing supplies. He stated that a rock crusher will be taken to the high forest area this week, and crews will start at once to rock a stretch, where the ground is somewhat marshy. Mr. Langille has located a good gravel pit along the route, and gravel surfacing will be applied to other sections of the road.

Thirty men are now at work on the Lost Lake Highway.

FIRE BLIGHT FOUND ON VALLEY TREES

F. M. Green, new county fruit inspector, has discovered fire blight in orchards along the ridge between here and Mosier and in the Fir district. He says that the disease, one that is most dreaded by orchardists, is showing up in the Parkdale district.

"Around Parkdale," says Mr. Green, "the disease is appearing on the spurs of the apple trees. The discovery, however, is nothing over which growers should be alarmed if they will all cooperate in being on the lookout."

"Fire blight is a disease that can be checked and controlled only by constant vigilance. If any growers find it in their tracts they are urged to communicate at once with the office of the inspector."

Homestead Has Radio

Lloyd Simson has just returned from installing and tuning up a radio set at The Homestead, the new Upper Valley summer resort of ex-County Commissioner J. O. Hannum. The resort, hither, just opened for the summer, is located near the base camp of the Hood River Post of the American Legion, where the post plans placing a radio set for entertainment of the 750 participants in the second annual ascent of Mount Hood on July 16. Mr. Simson says the success with which the Homestead set is working indicates that the Legion camp radio outfit will prove an attractive feature of the camp.

Electric Display Spoils Radios

A high frequency electrical demonstration, presented here Friday and Saturday night as a feature of a benefit show for the K. of P. band, made life miserable for local radio enthusiasts. The electrical energy, during the course of the performance rendered the receiving sets useless, and Friday and Saturday night concerts were not heard by local folk.

NORTON WINNER OF TENNIS TOURNAMENT

John R. Norton Sunday won the singles finals in the annual tournament of the Benedict Tennis Club. Mr. Norton and his opponent, Frank A. Cram, played more than three hours. Each had won two sets. With Mr. Norton leading in the fifth set, Mr. Cram was seized with cramps in his legs and was unable to continue the game.

On the night before, Mr. Norton and Harry T. DeWitt played 2½ hours in the semi-finals. Mr. Cram defeated Berkeley Snow in semi-finals. The club's finals in doubles will be played the latter part of this week. The season's tournament is creating more than usual interest, because of play that will follow for a county championship cup, given by W. F. Laraway. Many spectators watched the Norton-Cram match and the semi-finals encounters.

Sunday Harry S. Gray, Gus Wake-man and Morris Dunn, of the Multnomah Club, were here to participate in matches with the local tennis men.

Seattle Car Has Accident

An automobile owned by C. J. Wells, of Seattle, accompanied by his wife, and niece, Miss Ruth Williams, and nephew, participated in a sensational accident Thursday afternoon. On making a sharp turn, Miss Williams became confused and drove across a sidewalk into the corner of the brick building occupied by the Vincent & Shank grocery. Two pedestrians, at the corner, stepped aside just in time to prevent the machine pinning them to the corner. The impact knocked out a barrow load of brick and twisted the front axle.

The Seattle party, which had been attending the Portland Rose festival, was en route home by way of Walla Walla and return over the Snoqualmie Pass.

Rialto Gets Radio

A long-wave radio set has been installed at the Rialto theatre. The new plant, equipped with a powerful amplifier, will be able to receive for the entertainment of its patrons long distance reports and concerts.

Lloyd Simson has made the installation.

Had Your Iron Today?

Delicious Hot-Day Lunch

Best lunch is two packages of Little Sun-Maid Raisins and a glass of milk. Tastes good when you're hungry. Nourishes yet keeps you cool. Raisin's 75 per cent fruit sugar is in practically predigested form, furnishing 1560 calories of energizing nutriment per pound. Doesn't tax digestion so doesn't heat the blood, yet energizes almost immediately. Big men eat little lunches to conserve their thinking power. Don't overeat and lag behind the leaders. Get two packages of Little Sun-Maids now.
