ness folk join the throng of growers Saturday and go down to the new stor age plant. It is a place that you ought STRAWBERRY ROOT to know about.

#### MR. HOOVER'S DISAPPEARANCE

Herbert Hoover has been enjoying life these past few days, having dis oppeared from the routine of confer ences with public officials and citizen seeking support from the federal demerce into some un known place in the Willamette Val-Mr. Hoover will travel through es in which he spent his boy

Apple harvest is near at hand, and he apple grower and shipper are omewhat at sea over the marketing a strong sense of smell and re readily to certain odors. These magnitude of tonnage in all commer- may be slightly perceptible or not a cial apple sections. Indeed, there may all perceptible to humans. So Forsel sought and found an attractive agent to add to the food substance. Next an be grounds for worry. Still the Hood River orchardist should consider that ficient polson was sought, one would not destroy the attractive f the bait and one which the the tonnage of this district was never of higher quality. The Newtown, the would eat. This also was found. Tr with the completed bait proved it tirely effective. What is told here t most staple of all export apples in America, predominates here. An analysis of the entire apple marketing outpractically four long years of work to discover during odd moments and spare time and without outside financial aid, look indicates that the grower whose tonnage is rigidly graded and runs and only after repeated trials - and failures. largely to the higher grades will end the season with a profit.

failures. Two years ago enge trials and field trials on a small scale showed the effec-tiveness of the bait. Last season lim-ited field trials at different seasons of the year and at widely separated points further proved the efficiency of the bait. Cage trials at many different times also showed this repeatedly. Although knowing for certain last sea-son that his bait was entirely efficient, Forsell desired still one more senson of trial and demonstration of its effective-ness before announcing the discovery. ness before announcing the discovery So this season just past, experiments trials were-repeated on caged beetle and extensive field trials were carrie on. In all of these the bait again proved consistently efficient in destroy

ing beetles. The material is applied dry to the fields by walking along the rows and throwing a spoonful down into the crown of each plant. The material is crown of each plant. The material is best placed down among the stalks of the leaves and stems, as that is where the beetles are and where they gather. One man can balt three acres a day in this way. This method of treatment takes approximately 100 pounds to the acre where the plants are in the hill system. The bait remains on the plant crown and is effective for a long period up to the time heavy rains start. Ar-rangements are being made to have the material available through co-operative organizations and interested cannery-men. It will be labeled and sold under the regulations of both state and fed-eral laws. eral laws.

eral laws. The time of application is governed entirely by the life history of the pest. As this remedy is directed against the beetle stage, it is best to apply the balt when the maximum number of beetles are present in the life cycle. This time has been found to be inst offer has been found to be just the beetles have emerged from the pu-pal stage, which is approximately the first week in July, or, about the time the last berries are being harvested. This time may vary slightly with the

Voiles, Broadcloth, Crepe Weave, Ginghams, Poplins, Royal Ribbed, Prints.

You will be more than satisfied with Everfast. There is nothing quite as good and you are absolutely not taking any chances as every piece is backed up by a guarantee that means just what it says and we stand back of that guarantee.

You should see these new colors and figured pieces to fully appreciate their beauty. You can select no material that will make up into school dresses to a better or more satisfactory advantage and they always look like new no matter how many times you send them to the laundry. That is worth a whole lot, you'll admit.

We invite you to come in and see them.

**Special - Dress Ginghams** 

In plain colors, stripes and plaids. Values in this lot up to 69c a yard. This would make up splendidly into children's school dresses.

#### THE VOTER'S PAMPHLET

The system of initiative and referen

No elector ought to vote on an measure unless he or she knows what it's all about. How many electors are going to read and digest the 104 pages of the pamphlet just issued to them in measure unless he or she knows what of the pamphlet just issued to them in explanation of the 18 bills or measures The voter's pamphlet on measures

indies and gentlemen, is off the press. You should receive yours soon. Get usy, study it, read it assiduously and make a brave attempt to understand make a brave attempt to understand those things which you will favor or oppose by your ballot in November. If you fall to understand any of the sures, do not vote on it.

The apples are reddening on every igh of every tree, that is, those of rictics characterized by a glorious ing. The Hood River Valley is a

ht worth viewing.

ulcatus). During the past years many different the rules which have been formed for weevil pest and to eliminate it. Some thought advisable to use it anyway methods have been attended with some and to kill all the beetles possible and

dum is idealistic from the standpoint of theory. In practice, however, we wonder if it doesn't result in too much of a mass of laws desired by zealous minorities. Indeed, there shouldn't be any wonders or doubts about it—it

successful. Experience in the past has shown that any remedy for the control of the weevil must have several features, which are that it must be the poison bait, and would have died soon, being in the enfectible condition they were. Thousands of dead beetles were present, there being many to the be low in cost. At this time is were made in November showed surprising of the weevil has been found that few grubs present. Further field trials were made las Further field trials were made las

explanation of the 18 bills or measures which will appear on the ballot at the November election? Certain elements of our electors declare with all seri-of our electors declare with all seri-ousness that the voter should inform himself. This is sound advice. But we doubt if these elements know so very much themselves about the meas-ures, with the exception of those for which they are so zealously working or opposing. The voter's namehlet on measures

cacy of the bait as an exterminator.

e spector at Everett, became interested in the problem of weevil control. He first made quite an intensive study of the habits of the beetles and then in the spring of 1923 started on a search for a substance they would eat freely. The beetles normally do very little feeding. such as they do being on the leaves of strawberry and some other plants, and that only to a slight degree. Such a
