Liquor Causes Trouble

M. M. Craig, Upper Valley man past middle age, arrested Monday night on a liquor charge, was fined \$30 Tuesday by Justice of the Peace Blagg. Mr. Craig, who has an excellent reputation, had returned from Portland where he had had teeth pulled. He was arrested by Night Marshal Raymer, who saw him pull a bottle in a public place.

Paul Kaupang, arrested by Deputy

Sheriff Sloan Monday night on a charge of driving while drunk, waived examination and was held to the grand jury which will meet next Monday.

The Blow Almost Killed Mary

Mary had a little lamp, 'Twas filled with kerosene. She blew right down the chimney And vanished from the scene. —Uncle Woe Woe.

RIALTO THEATRE Nov. 8-9-10
Mon., Tues., Wed.

Reginald DENNY

Take it from me!

from the sensational musical comedy by WILL B. JOHNSTONE and WILL R. ANDERSON

Grace was a peach and Gwen was a lemon. And "Take It From Me" it was one tough job to get rid of the one and win the other. But the lemon was a gold-digging social climber. So he went about ruining his department store inheritance. And how! It's a situation rich with the delicious humor of the antics and whims of an irresistible and irresponsible young spendthrift—and it'll make you howl with delight.

NOTE—Denny in every picture has been improving; in "Take It From Me" you will see him at his best, and in what critics say is as good a Comedy as has ever been made.

APPLES, PLEASE! EAT LOTS MORE

National Apple Week has been set for October 30-November 6 inclusive and those responsible for it will move heaven and earth if possible to make it the most stupendous demonstration of its kind ever staged. The slogan is "Apples, please."

James Handley, of Quincy, Ill., made the first personal appeal for National Apple Day 21 years ago.

Early in 1912 the idea was adopted by the International Shippers association and the first nation-wide celebration was under its direction.

In 1924 "National Apple Week Association, Inc." was formed to carry out a national publicity program.

Seventy-five and 10 "Apples for Health, Inc." was organized in Chicago to stimulate the demand for apples by nation-wide advertising and publicity. All branches of the industry and all sections of the United States were represented.

In view of the prominence of the apple in the domestic, industrial and economic life of the nation from time immemorial, it would seem strange that so much energy need be expended now bringing it to the attention of the world. And yet it is easy to explain. The apple has been regarded as a matter of fact, and little attention was paid to it before these campaigns were organized because it was taken for granted. Everybody knew about it—Why advertise it?

But statistics proved that the apple is not enjoying the high favor that it had won these many years. It was slipping. Growers were not disposing of their products, and that wonderful, health-giving domestic staple was rotting in quantities on the ground. Orchardists who had spent their lives perfecting high standards were threatened with ruin because unable to market their crops. Something had to be done.

This year's crop is one of the largest that the industry has ever known and it will spell ruin to thousands of growers unless new interest can be created in the apple. It is estimated that 120 million bushels of apples will be produced, which at a fair market price of \$1.50 per bushel will make it one of the country's richest industries. But these are mere figures unless the apples can be sold.

When the industry began to look about seriously it was discovered that the orange growers spent \$500,000 a year advertising, and that in a few years they had increased the annual consumption from 37 to 65 per cent nationwide. The raisin growers of California had the same problem. In ten years they have spent a million dollars in advertising and have increased consumption from one and one-half to four pounds per capita. Sales mounted from 70,000 to 200,000 tons a year.

The answer was plain. Regardless of the apple's fame and interest it was not being consumed. The nation must be aroused to its value and made to understand that it is one of the most wholesome and valuable fruits in existence.

These big associations have outlined prodigious campaigns the cost of which, according to the legislation of the "Apples for Health" organization, is to be paid by the growers themselves, in precisely the same manner as the oranges and raisins paid for theirs.

Every conceivable form of printed matter likely to arouse interest in the apple is being prepared. Interest in tremendous work and one of the most valuable is the little booklet published by Apple Dishes. It has spread all over the world and has been translated into various languages. Its recipes have measured up to the most critical tests and nothing in use has proved a greater boon to the housewife. It will be mailed free on any address on request, and to the extent that it opens so many avenues for the wholesome and profitable consumption of apples the movers in this great campaign urge its use by every family in the nation.

Canadian Apple Crop Summary

Owing to unfavorable growing conditions during the past month in Ontario and in the provinces of Quebec and Nova Scotia, the Canadian commercial apple crop shows a further drop and is now estimated at 80 per cent, or 2,550,000 barrels as compared with 2,835,400 barrels in 1925. British Columbia estimate of 3,825,000 boxes is confirmed. It is possible the total pack will overrun this figure. In Nova Scotia the apples are not sizing up as anticipated and the crop is principally to be found on the outside of the trees; while in Quebec and New Brunswick quality fruit has caused a further crop reduction. Ontario accounts for the decrease in this month's estimate to the backward season and most varieties failing to size.

With the picking season well advanced in British Columbia the commercial apple crop of 3,025,000 boxes as estimated last month is confirmed, as compared with 2,785,000 boxes in 1925 and 124 per cent of the five-year average. There was a slight drop during the last week of September which slightly affected some of the low-lying orchards and the damage is estimated at about two per cent of the total crop. Most of the damage was done by growers picking their apples while the frost was still in the fruit, which made them unfit for shipment. As most of the orchards are overrunning their estimate, the slight damage from frost will make no difference in the total figure. It is estimated that the total pack of McIntosh Reds will amount to approximately 1,000,000 boxes. The crop generally is of good quality. In some sections the McIntosh were picked before proper color had developed.

Bakery Gets Praise

Praise was extended last week by a report of an inspector of the office of the State Dairy and Pure Food commission, who was here visiting local food plants. The report stated that the light of the salesroom and the bakery is excellent. Attention was called to the electric screen, which prevents entrance of flies. The showcases, the report stated, are in excellent condition and are kept clean.

The basement workroom, according to the report, is sunny and kept in a very clean condition. The comment on the oven was that it was excellent, and the report declared the concrete floor ideally arranged with its drains for flushing. The cleanliness of mixing troughs and tables was noted.

Infant Buried Here

Gravestone funeral services were held at Idlewild cemetery Monday for Grace, the infant daughter of D. L. Brumbaugh, local automobile mechanic. The child's death occurred Sunday at Cherryville, and the body was brought here Monday. Rev. W. O. Livingston, pastor of the First Christian church, officiated.

The baby's mother died when she was a few days old last August.

Revival at Blingen

The revival at Blingen is going ahead in fine form and great spirit. The house was filled Sunday afternoon to hear Dr. Apitz, who is conducting the campaign, preach the sermon on the subject, "Fatal Folly."

Among some fine points emphasized by the preacher was this choice illustration: "The story is told of a certain church in Connecticut, which had a pastor who was very brilliant, but not sound in doctrine. There were three goodly men in that church, who realized their pastor was not telling the truth. But they did not go around among the congregation strutting up dissatisfaction with the pastor. They covenanted together to meet every Saturday night to pray for their minister. So Saturday night after Saturday night they met in earnest prayer; their Sunday morning they would go to church and sit in their places and watch for an answer to their prayers. One Sunday morning, when the minister arose to speak, he was just as brilliant and gifted as ever, but it soon became evident that God had transformed the man. Theodore Cuyler is authority for the statement that a great revival came to that city, through the minister who was transformed by the prayers of his members."

Dr. Apitz closed his message with the impassioned plea to commit "Fatal Folly" in expecting results in any endeavor unless all concerned united in one concerted effort, and stated, "Oh, if we would talk less to one another against our ministers we would have far better ministers and churches than we have now."

The meetings continue every night at 8 p. m.—Communicated.

Singer to be at Gospel Tabernacle

Dr. Apitz, pastor of the Gospel tabernacle, is much enthused over the news that one of Portland's sweetest singers will spend the coming Sunday at the tabernacle and sing at each service. She is Miss Floella Jacobs, a charming young lady, with a beautiful voice which carries in it a wonderful message of the vital Christian spirit its

MR. WILBUR GOING TO WASHINGTON, D. C.

Geo. H. Wilbur, secretary and attorney for the East Fork Irrigation district, has been in Portland engaged in final preparations of a brief to be presented to the United States supreme court in the case involving the adjudication of the water rights of the Hood river watershed.

The litigation was initiated in 1914, when the Oregon Lumber Co. sought to enjoin the East Fork district from application of claims to the East Fork of Hood river. The case resulted favorably in circuit court to the irrigation district. While the supreme court's ruling, when the case was appealed, showed a victory for irrigationists, the high court remanded the case. It was cited that other similar litigation was imminent, and the state water board was instructed to make a survey and adjudicate all claims on the entire water shed. The water board's findings, which favored irrigationists of the valley, were upheld in circuit court decision, which was affirmed by the supreme court.

The Pacific Power & Light Co., however, appealed to the United States supreme court, claiming error on the part of the high state court in not allowing the power concern rights to use of water incident to riparian ownership. The United States supreme court has called the Oregon irrigation case for November 22.

Care and Prevention of Diphtheria

(By Frederick D. Stricker, M. D., collaborating epidemiologist of Oregon State Board of Health, in cooperation with the United States Public Health Service).

Diphtheria today is known to be both preventable and curable. This seems almost incredible to many people, for only thirty years ago death claimed more than one-third of those attacked by the disease; the effective protective measures were unknown. This advance in medical science stands as one of the major medical triumphs of all time.

By taking toxin obtained from diphtheria germs in a laboratory, combining it with the antitoxin obtained artificially, in a way that will be presently explained, the power to do harm by the poison or toxin is removed. This combination is known as toxin antitoxin mixture. If a series of minute and harmless doses of this mixture are given to a child, nature responds by producing natural antitoxin in the child's blood, and he will then be protected against diphtheria.

This is antitoxin obtained artificially: It was long ago learned that if a horse is given several successive doses of diphtheria toxin, it develops antitoxin in its blood, just as does the child who receives toxin antitoxin mixture. The horse can spare a little blood occasionally and its removal from a vein causes it little or no discomfort. The antitoxin is extracted from the blood, concentrated and then purified, all under most carefully regulated conditions. The resulting product is a clean, pure portion of the horse's serum.

If a sufficient amount of antitoxin is given on the first day of the illness of a child from diphtheria, it will combine with the poison or toxin and neutralize it as far as germs can produce it, much as alkali neutralizes acid. The poison then has no chance to damage the nerves and other vital organs and the child is almost sure to recover. If, unfortunately, the use of antitoxin is at times delayed for several days, the poison or toxin in the meantime has had a chance to do damage which cannot be undone. It is in these cases that children die or develop complications.

The antitoxin can be used in still another way. If a person has already been exposed to diphtheria, we do not give him toxin antitoxin, because it would take time to develop its own antitoxin, and he might come down with the disease in the meantime. He should instead be immediately given a small dose of antitoxin. If he circulates in his blood for two weeks, more or less, and while it remains there, he will be protected. The effect is immediate and is apt to last long enough to get him past the danger period.

To sum up the whole proposition in a few words, while diphtheria toxin is a powerful poison, it loses its poisonous properties when combined with its specific antitoxin. The injection of this mixture confers immunity. When antitoxin is present in the body, in a sufficient quantity, it will counteract the effects of any toxin which diphtheria germs can produce. Given after exposure to disease it will usually protect for two weeks or more. Given in larger quantity immediately after the disease has developed, it will bring about probable recovery, but with each day's delay it becomes less effective.

Summons

In the Circuit Court of the State of Oregon, for Hood River County. State Land Board of the State of Oregon, Plaintiff, vs. Louise Stewart, Defendant.

To Louise Stewart, the Above Named Defendant:

You are hereby required to appear and answer the complaint filed against you in the above entitled suit on or before six weeks from the date of the first publication of this summons, to wit: On or before the 5th day of November, 1926, and if you fail so to appear and answer said complaint, a decree will be taken against you for the relief prayed for in said complaint, to wit: For the foreclosure of that certain mortgage made and executed by William Hannah to the plaintiff State Land Board of the State of Oregon, dated the 25th day of November, 1922, and recorded in Volume 14 at Page 503 of the Records of Mortgages of Hood River County, Oregon, securing the promissory note of said Hannah made, executed and delivered to the plaintiff for the sum of \$500, of even date with said mortgage, due one year after its date; for the further sum of \$50 attorney's fees, and for plaintiff's costs and disbursements made and expended herein; for the sale of the real property hereinafter described, and foreclosing all your right, title and interest in and to the same, which real property is described as:

Beginning at a point in the section line between sections 28 and 29, sixty rods North of the Southeast corner of Section 29, in Township 2 North, Range 10 East of the Willamette Meridian, thence running West 80 rods; thence North 20 rods; thence East 80 rods; thence South 20 rods, to the place of beginning; also a right of way for road purposes 12 ft. in width described as: Beginning at the Southeast corner of a certain tract described as: Beginning at a point on the Section line, between Sections 28 and 29, sixty rods North of the Southeast corner of Section 29, Township 2 North, Range 10 East of the Willamette Meridian, running thence West 80 rods; thence North 20 rods; thence East 80 rods; thence South 20 rods to the place of beginning; for the beginning point of said right of way; thence South 80 rods; thence East 13 rods; thence South 11 rods; and thence Easterly along a draw, to the county road.

This summons is served upon you by publication thereof in the Hood River Glacier, a weekly newspaper of general circulation, printed and published at Hood River, Oregon, for six successive weeks, in accordance with the order of the Hon. Fred W. Wilson, Circuit Judge of Hood River County, Oregon, dated the 23rd day of September, 1926, requiring you to appear and answer said complaint on or before the 5th day of November, 1926.

Dated and first published this 23rd day of September, 1926.

A. J. DERBY, Attorney for Plaintiff, Hood River, Oregon.
