## ENGINEERS FAVOR IDENTICAL RATES FOR DAM POWER

Although a Bonneville power rate policy has not been announced, army engineers apparently believe the government should sell power wholesale with an identical rate to municipalities and private utilities, making no concession to industries as private utilities do to build business, it was indicated this week in dispatches from Washington, D. C.

Reason for the attitude is believed to be the unwillingness of engineers to have the Bonneville project undercut the rates of private power companies.

Conferences between U. S. engineers and government agencies are being held in the nation's capital this week to establish rates. Army engineers want some one designated to fix the rate, perhaps the board of engineers, which would require an act of congress. Engineers at present can only estimate the rate, for their own information with charges off for navigation and fishways pending the time when someone is officially authorized.

Endeavor to have at least \$10,000,000 written off the cost of the dam for navigation and fishways and an additional amount for unemployment relief phases, is being undertaken by the Portland chamber of commerce this week in an effort to lower the power cost basis for computation of rates. The chamber is working for a \$4,000,000 allocation of PWA funds for construction of a single 11,000-volt transmission line from the dam to Condit, Wn., a two-circuit 110,000-volt line to Camas, Wash., power lines into Portland industrial sections, and the necessary substations.

Rural electrification, the retailing of power, does not concern the engineers and it will be handled by a new agency created by the president, who has promised Governor Martin sympathetic consideration on his request for allocation of federal funds for that purpose.

## Museum Shows Largest Animal That Ever Lived.

New York.—The largest land mammal that ever lived was taller than a giraffe—twice as long as a full-grown elephant—tipped the scales at the combined weight of 100 average men—and needed about 500 pounds of food per day to keep from starving.

It is the Baluchitherium, a super-giant prehistoric rhinoceros that lived in Asia about 25,000,000 years ago when the Gobi desert was a paradise of woods and waters—75,000,000 years after the dinosaurs had laid their last eggs and long before the coming of man.

This information was made public by the American Museum of Natural History and is based upon data collected over a long period of exploration by Dr. Walter Granger and of research by him and Prof. William K. Gregory of the museum's scientific staff.

In preparing the restoration of this animal, Doctors Granger and Gregory studied some 200 Baluchitherium bones which represented about twenty animals of varying sizes. In no case, however, were there enough bones to make a complete skeleton. This disappointment was largely offset by the presence of enough material to furnish an accurate yardstick which, after months of research, provided a picture of this super-beast of the past.

The restoration now completed at the museum visualizes an animal that was 17 feet, 9 inches tall at the shoulders and almost 30 feet long and weighing in the neighborhood of 20,000 pounds, that looked like a rhinoceros that lacked the horns of the present-day rhino. It had long legs, a small head, a large neck, and doubtless a tough hide. Its teeth were unusual in that it had two great incisor teeth in each jaw, which the animal probably used in tearing leaves and branches from bushes. Its name, the Baluchitherium, is derived from the fact that the first fossils were found in Baluchistan.

## LITTLE KNOWN FACTS

An old salt is Jack Young of French's at Bonneville. He's more familiarly known to seagoing buddies as "Shanghai Jack" from his many voyages to the orient. Before swallowing the anchor to take up barbering in the dam area, he'd put in about 19 years on salt water, traveling the world over. Last position was as assistant to the chief steward on a States line ship.

A well traveled man is Manual M. McCrady, owner of Bonny Park garage at Dodson. From every state in the Union but Maine to the far corners of the West Indies, Central America, Guam, the Philippines and China, McCrady carried the resplendent uniform of the United States marine corps during his five years of service in the past decade. He saw fighting in Nicaragua, fun in
