Pierce Sees Westward Trek

(Continued from Page Three)

I may state that, measured by the prices paid by the people who use the publicly owned power plant at Tacoma, Wash., users of electricity in Oregon are paying more than seven and a half million dollars annually—\$7,785,496—in excess of what they would pay for electric energy if they were charged at the Tacoma rates. The Tacoma yardstick also reveals that the people of the State of Washington pay annually twelve and a half millions—\$12,530,290—more than they would pay if all their people might have the Tacoma rates. Idaho is paying each year over three and a quarter millions—\$3,290,993—too much, measured by the Tacoma yardstick. The millions of dollars which could be saved annually by reduction of electric rates of the Northwest to the Tacoma standard would buy out and pay for every local distributing system in that area within the next 10 years. The Tacoma yardstick and the yardstick afforded by Ontario, Canada, measure our national electric excess charges at a colossal amount, which would pay the national debt in 21 years.

Debt Redemption—

The only raw material which enters into the manufacture of hydro-electricity is falling water. Lower electric rates do not cost the producer more, and they greatly increase the long-hour consumption of the product. There is little labor entering into generating costs, and the transmission lines are of long-time construction. The greater spread of use brings greater profits and lower consumer costs. These profits are, in publicly-owned plants, used to redeem debts, so that rates may be further reduced when initial costs have been entirely paid.

Public Ownership—

It is an axiom as old as time that business which does not admit of competition should be owned and controlled by the public. A private monopoly is as indefensible today as it was in the days of Plato, of Jefferson, or of Bryan. Electrical distribution is a natural monopoly because it does not admit of competition, if public welfare is considered. Furthermore, it uses natural resources and public facilities like roads and streets, which are public and not private assets. No municipality can afford to have competing systems providing the necessities upon which people are dependent, such as water, light and power. No city in a civilized country can exist without an abundance of these requisites, which should be furnished at the lowest possible price.

For necessities of life, people should not be left to the mercies of profit-seeking corporations, neither should absentee speculators be allowed to gamble with such projects. So successful have been the publicly-owned utilities that some cities have come to rely upon them for the income necessary to maintain other activities of municipal government. Certainly it should not be expected that the water and light systems should assume this burden. When the income from them has paid off the initial investment, the rates should be reduced to the minimum.

This opportunity for new industries at and near tidewater, excels that offered in any other region.

Think what the situation will be when the Government has been repaid for its power investment in dams and transmission lines, and the debts have been lifted from the distributing systems. What will then be the factors which will enter into the cost of electric energy in the Pacific Northwest? Chiefly falling water, with electric rates so astonishingly low that it will make this section an ideal place for home, for farm, and for industry.

In another generation marvelous changes will come over this favored region, which will then have amortized the costs of these noteworthy improvements which will furnish light, power, and heat.

Girls' League News

Lois Linton, a member, who has been with us for nearly four years, moved away last week. We are all very sorry that she has left and all hope she will write to us frequently as she promised to do.

Before she left we had a farewell party for her, each of us bringing some sort of refreshment. Each of us also brought a small bit of money to help buy a farewell present for Lois.
