\$3000 A YEAR!

For those who are willing to study hard and work hard, there is no better opportunity than this. The Government is now making over \$3000 a year for those who are willing to study hard and work hard. This is a great opportunity for those who are willing to study hard and work hard. For more information, apply to the nearest office of the Government.

QUEER KINDS OF PAIS.

STRANGE PARTNERSHIPS AMONG FISHES AND BIRDS.
The Shark and His Little Friends the Pilot Fish—Using Jelly Fish for Umbrella—The Honey Hunters.

It is a peculiar belief among many sea-farers that the shark depends to a greater or less extent upon the pilot-fish for information, and is guided by this little attendant to the various tidbits that come in its way. How much truth there is in this it would be difficult to determine, but it is barely possible that the curiosity of the shark may be attracted to food by the action of the pilot-fishes.

When sitting in my boat fishing I noticed the scythe-like fin of a large shark moving about in the vicinity. It had evidently scented a bunch of fish which I had hung over the stern, and came up the tide or current in rapidly increasing circles. I threw a small line out astern, baited with a large sardine. This was taken and the line broken with a steady, dignified strain. But the shark still came on, its temper unruffled by the sharp barb in its jaw, and wheeled about the boat with its head slightly tipped, showing the ugly, hammer-like protuberances on either side.

As the shark approached, I passed so near that I could have touched the big dorsal fin, and I had an excellent opportunity to note the actions of the attendants. There were half a dozen in all, two or three being pilot-fishes and the rest the curious sucking fishes or remoras. As the shark swept around, the pilots—little striped fellows, three or four inches long—kept up their minute crustacean that had been fastened to every object that appeared like food. They were evidently foraging on their own account, and that the shark saw there can be but little doubt. But in all probability, it had scented the fish a long time before and paid no attention to the so-called pilot fishes.

They would dart at a bit of seaweed and nibble at it, perhaps catching in a minute crustacean that had been fastened to every object that appeared like food. They were evidently foraging on their own account, and that the shark saw there can be but little doubt. But in all probability, it had scented the fish a long time before and paid no attention to the so-called pilot fishes.

IS ALUM POISONOUS?

"This question has caused a good deal of discussion. Alum is used by many bakers to whiten their bread, enabling them to use an inferior flour. It is most extensively employed as a cheap substitute for cream of tartar in the manufacture of baking powders. It has not been considered immediately dangerous although it continued it induces dyspepsia and obstinate constipation. But the fact that many cases of poisoning have occurred from the use of alum, puts the question in a more serious aspect, and prudent people will exercise caution in the selection of baking powders.

"I tried what conditions then, does this substance—formerly used only for mechanical or medical purposes—become poisonous? They are certainly obscure and at present we can only surmise what they may be. We suspect that the cause exists in the individual poison; but the secretions may be healthy but in unusual proportions, and that these less or greater proportions in combination with the alum constitute a poison.

"For example, two parts of mercury and two parts of chlorine form calomel which is not poisonous, but change the proportions to one part mercury and two parts of chlorine, and we get corrosive sublimate, which is a deadly poison.

"Then again, we know nothing of the constitutional peculiarities. Why is it that one person can eat all kinds of green fruits and vegetables with impunity while the same course might cost another individual his life? One person can handle poison ivy and sumac without being in the least affected, while another who touches them is so badly affected that he is unable to walk for several days.

"The Scientific American published in a recent number a list of alum and ammonia baking powders, which is of great value at this time. Following is the list compiled from the following:

Powders marked with a star seem to have a general sale, as they are mentioned in at least two of the official reports.

*Atlantic & Pacific, *Royal, *Cook's Favorite, *Scioto, *Crown, *Silver Spoon, *Crystal, *Silver Star, *Daisy, *Snowdrift, *Davis' O. K., *Sovereign, *Gay, *Star, *Glen, *Standard, *Kenton, *Sunflower, *Pearson's, *Washington, *Perfection, *Winslow, *Purity, *Zipp's Grape, *Crystal.

There are, in addition to the foregoing list from the Scientific American, a number of such powders sold in the western states that were not found in the eastern states.

Following is the list to date:
Calumet..... Contains Alum
(Forest City, Chicago)
Lumet City..... Ammonia Alum
(Voorhe Bros., Cleveland)
Chicago Alum..... Ammonia Alum
(Chapman & Smith, Chicago)
Bon Bon..... Contains Alum
(J. C. Grant Pak'g Pwdr Co, Chicago)
Unrivaled..... Contains Alum
(Syracuse, Warner & Griswold, Chicago)
One Spoon Taylors..... Ammonia Alum
(Yarnall Bros., St. Louis)
Shaw's Snow Puff..... Contains Alum
(Merchandise Mfg. Assn., St. Louis)
Dodson & Hills..... Ammonia Alum
(Dodson & Hills, St. Louis)
Shepard's..... Ammonia Alum
(Wm. Shepard, St. Louis)
Bain's..... Contains Alum
(Bain Mfg. Co., St. Louis)
Monarch..... Ammonia Alum
(Reid, Murdoch & Co., Chicago)
Snowball..... Contains Alum
(Bengal Coffee & Spice Mills, Chicago)
Frank's..... Contains Alum
(McLaughlin & Co., Chicago)
ECHO..... Contains Alum
(Spencer Bluing Paddle Co., Chicago)
Kallell's Purity..... Contains Alum
(Kallell Mfg. Co., Chicago)
Rising Star..... Ammonia Alum
(Phoenix Chemical Works, Chicago)
White Rose..... Ammonia Alum
(Globe Coffee & Spice Mills, Minn.)
Woods Acme..... Contains Ammonia
(Wood & Co., Philadelphia)
Andrews Pearl..... Contains Ammonia
(Andrews & Co., Milwaukee)
Harries' Favorite..... Contains Alum
(H. Harries, Minneapolis)
Fidelity..... Contains Alum
(Sherman Bk. Co., Chicago)
Putnam's Best..... Contains Alum
(Wells, Putnam & Co., Chicago)
China "T" House..... Contains Alum
(N. McDowell, St. Paul)
Twin City..... Contains Alum
(J. K. Ferguson, Minneapolis)
Hercules..... Contains Ammonia
(Hercules Bkg Pdr Co., San Francisco)
Climax..... Contains Ammonia
(Climax Bkg Pdr Co., Indianapolis)

There are pure cream tartar baking powders on the market. All authorities report Dr. Price's Cream Baking Powder as free from Alum, Ammonia, or any other adulterant. The purity of this brand has never been questioned.

Ten species of North American birds are put down by the ornithologist as "missing" Of these, two—the great auk and the Labrador duck—are believed to have become extinct within the memory of living men. Perhaps representatives of the other eight will yet be found. Most of them are very diminutive.

WOMEN IN BUSINESS.

The decreasing marriage and birth rates have been the subject of a great deal of discussion without leading to the assignment of an altogether satisfactory explanation. Added difficulty in securing the means of subsistence, the impractical education of girls, the effect of higher education and a new standard of living, consequent upon classifying as necessities many things formerly regarded as luxuries are among reasons which have been tentatively suggested. The most notable contribution bearing on these subjects is that of Gen. Francis A. Walker in the Forum. He holds that the millions of foreigners coming to this country have not increased its population. General Walker demonstrates that if the rate of increase which prevailed from 1790 to 1830 when the population was "essentially native American" had continued the number of people in the United States would have become as great or even greater than it is now. The General boldly affirms his belief that such increase would have been maintained in the absence of immigration which he thinks not only cheapened labor but had the effect of degrading many kinds of work which otherwise would have been held honorable with the further result of decreasing the number and size of families. It is not the purpose of this article to discuss the probable or improbable truth of this proposition. The high reputation of its author will secure its careful consideration, but it may be stated in passing that whatever weight attaches to this argument may be applied to the invasion of business circles by women and in proportion to their numbers with even greater force, at least as far as concerns the compensation of service. This feature of the question has received a very little attention possibly because it is a view not likely to be popular. The demand for competent labor in vocations inherently feminine is by no means met; and while men of generous impulse can afford to congratulate women on the opening of so many new avenues to their numbers with even greater force, at least as far as concerns the compensation of service. This feature of the question has received a very little attention possibly because it is a view not likely to be popular.
