S. B. Headache and Liver Cure

It works so nicely, cleansing the Liver and Kidneys; acts as a mild physic without causing pain or sickness, and does not stop you from eating and working.

To try it is to become a Friend to it. For Sale by ROGERS BROS.

CARD OF THANKS.

Prompted by gratitude to

Dr. DeFreye, the European specialist, who has succeeded in curing me of chronic kidney, liver and gastric sickness, for the treatment of which I had consulted a number of other physicians, through which I was brought to the verge of despair, fearing I never could be cured, I consider it my duty to recommend him to my fellow citizens who may be afflicted.

W. K. WHITE, Whiteson, Yamhill Co., Oregon.

Dr. DeFreye, corner of 1st and Pine streets, rooms 6 and 7, can be consulted free on all chronic diseases of both sexes. The cures of private diseases, such as Loss of Manhood, Impotency, Errors of Youth, Stricture, etc., (his principal specialties by dint of his European hospital experience), are never published.

Correspondence P. O. Lock Box 329, Portland, Oregon.

Office hours from 10 a. m. to 4 p. m. and from 8 to 9 o'clock in the evening.

POLES REDUCED FROM 15 CENTS PER MONTH TO 10 CENTS PER MONTH.

Remedies that do not injure the health of infants with one business on health, clean the child and hasten the completion of the system. Follow the treatment. Backed by physicians and leading society ladies.

PATENTS BY MAIL. CONFIDENTIAL.

Facts Worth Remembering

THAT

BURNS & DANIELS

Have the Largest Stock of

Furniture, Wall Paper, Carpets, etc.,

In the valley outside of Portland.

THAT

They can and will sell for CASH, or a reasonable length of time, cheaper than the public have ever been able to buy.

THAT

This does not mean six months or one year, and then 10 per cent. to our attorney for collection.

THAT

It is a mistaken idea that goods can be sold as cheap on time as for Cash.

THAT

The proposition is this: That CASH IS THE BASIS, and that those who allow their names to go on our books must pay from 5 to 10 per cent. for that luxury.

THAT

BURNS & DANIELS.

WE WANT YOUR EYE

Points to Remember for 1892, in the purchase of Groceries.

Fully one-half of the People do not stop to consider the money they can save during the year in purchasing goods of a firm that pays strict attention to the selling of First Class Goods at a Small Profit.

People usually go to the nearest place regardless of cost. We sell our goods cheap and deliver them at your door. You will be able find every thing in the grocery line in our store.

We are in it--The Grocery Business; and we will always give you the best goods in the city for the money. We give cash or trade for all produce, suit yourself in the matter.

MILLSAP & SON.

Combination? Yes

O. O. HODSON

HAS MADE A BIG COMBINATION!

I have enlarged my store and have combined a full and complete stock of

Sash, Doors, Mouldings, Glass, Paints, Oils, Varnishes, Brushes, etc.

And everything belonging to this class of goods

Have also Combined a Line of Fishing Tackle & Guns

This with my immense Stock of

HARDWARE, STOVES AND TINWARE

ALTOGETHER MAKES A COMPLETE COMBINATION

As to stocks, but not with any other firm or men.

STILL RUN MY BUSINESS AT THE OLD STAND, WHERE PRICES AND GOODS CAN'T BE BEAT.

Call and see me before buying.

O. O. HODSON.

DRUNKENNESS—LIQUOR HABIT—In all the World there is but one cure. Dr. Haines' Golden Specific.

It can be given in a cup of tea or coffee without the knowledge of the person taking it, effecting a cure and permanent cure, whether the patient is a drunkard or an alcoholic wreck. Thousands of drunks have been cured who have taken the Golden Specific in their coffee without their knowledge. Free will. No harmful effect. Results from its use are permanent. Address in confidence, Dr. Haines, 105 Race Street, Cincinnati, O.

\$3000 A YEAR! I intend to have...

EPIDEMIC OF CHOLERA LATER YEAR. 50,000 deaths in Mesopotamia, 10,000 in Syria and 15,000 in Persia. The disease which is caused by bacteria, is always present in the part of Asiatic Turkey where Mecca is situated. It is never entirely stamped out in India. Many shrines in that country are sought annually for purposes of piety by myriads

ON GUARD AGAINST DEATH

THE UNITED STATES SLEEPLESS VIGIL FOR SAFETY.

Eternal Vigilance is the Price of Health—Keeping out Leprosy, Cholera, Smallpox, and Yellow Fever.

The establishment of a national leprosy hospital is provided for by a bill that will be introduced in this congress. This frightful disease is at present exciting the alarmed attention of the federal health authorities. It is very much more common in the United States than is generally imagined, because local officials customarily ignore, and even conceal, cases unless compelled by public clamor to take action. This they do for the reason that they know not how to dispose of them. A discovered leper is always a terror and a burden in a community and those afflicted with the complaint are usually hidden away under conditions of extreme wretchedness to themselves. It is asserted on competent authority that lepers exist to-day in every good-sized city in the country.

There has been much dispute as to whether or not leprosy is contagious, but there is no doubt whatever of the fact that it spreads wherever sufferers are not carefully isolated. It is making very rapid progress in Havana, where lepers commonly appear on the streets and handle the same filthy paper currency that forms the circulating medium among their healthy fellow-citizens. Serious concern is felt by the government respecting the prevalence and spread of leprosy in neighboring countries as reported recently by a United States consular officer in a request for information issued by Secretary Blaine. These reports are as yet withheld from publication for reasons of international policy.

The finger of warning is pointed toward the United States of Columbia. Leprosy was unknown among the original inhabitants, the first case recorded being that of a Spanish priest in 1646. Since that time the disease has spread slowly over the country. During the last twenty years however its advance in all directions has been rapidly accelerated, and to-day hardly a populated locality remains uninfected. The people are rapidly becoming a population of lepers. It is said that one out of every ten inhabitants of the departments of Santander and Boyaca has the disease.

Since the disease has spread slowly over the country. During the last twenty years however its advance in all directions has been rapidly accelerated, and to-day hardly a populated locality remains uninfected. The people are rapidly becoming a population of lepers. It is said that one out of every ten inhabitants of the departments of Santander and Boyaca has the disease. This estimate would place the total number of lepers in that section of Colombia alone at 100,000. The most conservative estimate sets it at 20,000. The immigration law framed by the last congress, in directing the marine hospital bureau to make sanitary examinations of all immigrants to United States named leprosy in particular as a disease to be carefully excluded. Most victims of it who come here are from South American and Cuban ports.

Another source of dread, imminent this year, is the "famine fever," as typhus is called in Russia, where the disease is familiarly known as the offspring of starvation. Immigrants, as well as all vessels, from that part of the world will be closely watched. At the suggestion of the surgeon general in charge of the Marine hospital service, the secretary of state has addressed a circular letter to all the United States consuls at ports in the czar's dominions asking for special reports concerning typhus. The responses thus far received indicate that although the complaint has reached several of the ports from the stricken districts, not one of these points is in direct communication by steam or rail with America. Of course, the fever may arrive in any of them at any time indirectly, as was the case the other day with the Masilia which brought infected Hebrew passengers to New York from Odessa by way of Manila, the site of a small epidemic in the metropolis. Fortunately, while no known disease is more fearfully contagious, typhus is easily stamped out by proper sanitary measures. The consuls have been instructed to keep this government advised by cable as to the progress of the disease in Russia.

To keep out the dangerous diseases which are constantly threatening to invade the country from all quarters, Uncle Sam is compelled to surround his wide domain with a sanitary fence that is made as impregnable as possible. He is always obliged to keep a watchful eye upon the Orient, where is the breeding place of a plague never completely extinguished, which needs only a spark to kindle into a destructive and wide spread epidemic. The Persian gulf and Red sea are two gateways by which the cholera may at any time invade first Europe and then America from Asia through the Ottoman Empire. It would be easy for the great powers to shut these gates by strict quarantine and away with this danger to the health of the civilized world; but, notwithstanding many discussions of the subject, they have never been able to come to any agreement among themselves on the point. England finds that quarantine rules obstruct her commerce, for the sake of which she is always willing to sacrifice everything, even to decency and good morals. So the regulations in this regard are left to be administered by corrupt Turkish officials, who never hesitate to convert a threatened epidemic into a source of revenue for themselves by exacting "backseeh" from people who will pay for being relieved from inspection and detention.

Smallpox threatens at all seasons, particularly from China; but such effective methods have been adopted for its prevention and extirpation wherever it appears that it is not greatly feared. Last winter there was an epidemic of this disease in Canada. Medical inspectors were placed at Detroit and Port Huron, and all the passengers from the infected districts who crossed the borders into the United States by train were vaccinated or sent back, unless they could show certificates of vaccination. All the vaccine used by the Marine hospital service is obtained from a farm near Washington, which is devoted exclusively to the manufacture of this product from young calves scientifically inoculated. The last congress made a law providing for interstate quarantine. In case of an epidemic anywhere the surgeon-general in charge of the Marine Hospital bureau is permitted to promulgate such regulations as he may deem requisite, subject to the approval of the secretary of the treasury. Consumption, typhoid fever, diphtheria, scarlet fever and measles are left to the attention of

THE SITUATION A WEEK AGO.

of human beings, their numbers regularly decimated by the fatal sickness, which, from these points, is distributed in every direction. Thousands of dead whose souls are supposed to be satisfactorily cared for, pollute the air, which the living must breathe, often with their bodies half buried. At Tor, near Egypt last year, African pilgrims returning from Mecca and detained by quarantine from passing through the Suez canal, were robbed of valuable carpets and much other property by officials who threatened to burn the whole as infected unless they gave up part. In various provinces of Turkey discrimination was made against Jews who were confined by alleged sanitary cordons until they nearly starved to death, while others were allowed to pass. They could only escape by the payment of money.

Happily it is believed that danger from Asiatic cholera will be less this year than last. On the other hand, yellow fever is at present more than usually threatening. There has just been a frightful epidemic of the latter at Rio, and vessels infected with the disease have arrived at United States ports much earlier and in greater numbers than ordinarily. This complaint is a cause of dread along the southern Atlantic and Gulf coasts every summer. Certain ports in South America and the West Indies are sick with it the year round, simply because of their filthy and abominable sanitary condition. To keep it out of this country the marine hospital service maintains large quarantine establishments on remote islands whither ships are taken for cleaning and scientific infection and where there are hospitals. One of the stations is on the Dry Tortugas, thirty miles from land. It includes a complete bacteriological laboratory, and is in charge of an expert medical officer, who is making a special investigation respecting the nature of yellow fever, which is thought to be produced by another variety of those interesting vegetable parasites called "bacteria."

Any craft arriving at a southern port and found to be infected, is sent by local authorities to the nearest "island of rufes," where she is filled with sulphur fumes, her woodwork is washed with bichloride of mercury, and the bedding of the crew is put through a steaming process in disinfecting chambers before she is let go.

The marine hospital service is a sort of federal health board. It looks out for the sanitary condition of the country at large without interfering with the functions of state or local authorities. Maintaining communications with United States consuls all over the globe, it keeps a watch on diseases everywhere, publishing a weekly report respecting the health and mortality of every big city in the world. Importations of rags to this country are made under inspection of its officers. They come largely from Marseilles which is the great ragshop of Europe, where they are collected from all over the continent, and even from the cholera-stricken districts of Asia. It is credibly asserted that some of them are actually the clothing of defunct pilgrims killed by the disease. However, no rags from Marseilles are permitted to enter a part of the United States without a certificate showing that they have been previously unbleached and boiled for an hour, or else subjected to steam or sulphurous acid gas. This regulation will soon be extended to such merchandise from all Europe.

Smallpox threatens at all seasons, particularly from China; but such effective methods have been adopted for its prevention and extirpation wherever it appears that it is not greatly feared. Last winter there was an epidemic of this disease in Canada. Medical inspectors were placed at Detroit and Port Huron, and all the passengers from the infected districts who crossed the borders into the United States by train were vaccinated or sent back, unless they could show certificates of vaccination. All the vaccine used by the Marine hospital service is obtained from a farm near Washington, which is devoted exclusively to the manufacture of this product from young calves scientifically inoculated.

The last congress made a law providing for interstate quarantine. In case of an epidemic anywhere the surgeon-general in charge of the Marine Hospital bureau is permitted to promulgate such regulations as he may deem requisite, subject to the approval of the secretary of the treasury. Consumption, typhoid fever, diphtheria, scarlet fever and measles are left to the attention of

state and local health authorities. Recent discoveries in bacteriology have made quarantine methods scientific. Instead of the once usual forty-day period of detention for infected vessels, the latter are only stopped long enough to put them through the disinfecting processes which have been ascertained to be sufficient to destroy the germs of disease. The wonderful character of the work accomplished by the system in operation may be feely conceived by considering the fact that at the single station on Chaudleur island more than fifty ships infected with yellow fever were dealt with last summer.

To Our Capitalists. Gentlemen: The city of McMinnville is growing in population faster than you are improving your property within the corporate limits. Numbers of our business men want brick buildings in which to transact their business. The fires of the past have been confined to the old wooden buildings that truly are a disgrace to our otherwise beautiful little city.

Capital has a duty to perform. It is a pennywise policy to keep up and rest an old shack of a building because it will bring a large rate of interest on the money invested in the building. As sure as fate the old buildings of this city will burn down and the ones to be injured the least by this will be the wealthy owners. The business men will suffer the most. Large stocks are now crowded into the old wooden buildings and these stocks will be a complete loss to the owners one of these days.

Our capitalists should look at this matter in the light of prosperity to all, for their prosperity depends upon the present and future growth of the city. If they will take this matter in hand and build several commodious brick blocks during the coming summer they will have no trouble in renting them. Their wealth depends entirely upon the residents of this city, and as its business and population increases their wealth increases. There is a demand for brick buildings and they should be built.

Let us see who is the most reasonable of our wealthy residents.

Last year: Her eyes were rheumy, weak and red, Her breath, you could smell it afar, She had ringing and dizziness oft in her head,

And the cause of it all was catarrh. This year: Her breath is sweet as the new meadow hay, Her eyes are as bright as a star, And the cause of the change, she is ready to say,

Was the Dr. Sage cure for Catarrh. Dr. Sage's Catarrh Remedy will positively cure catarrh of the head, no matter how bad or of how long standing. Fifty cents, by all druggists.

It is said that a person standing on the ruins of the old castle Hawarden, near Gladstone's home, can see with the naked eye enough unused park land to furnish livelihood for perhaps a million people. Most of this land is owned by the Duke of Westminster, and only the rabbits that overrun it seem to get any advantage out of it. Mr. Gladstone's estate comprises several thousand acres of forest land, untouched by any axe except that of the G. O. M. himself. It has been at times a favorite hunting preserve for Herbert Gladstone, who occasionally slaughters rabbits there.

A Ledge of Granite.

On the farms of C. A. Berry and J. W. Cows, within three miles of this city, has been discovered an immense ledge of extremely hard granite. It is black and well adapted for foundations of buildings, road purposes and could be used for monuments. The color is its only drawback, it being too dark to be used much in the ornamentation of a building. There is an inexhaustible amount of it. Mr. Berry intends to dress out a piece soon and place it on exhibition in this city.

Extremely little is known of the geology of this county, or for that matter of the entire Willamette valley. It has been prospected for precious metals by prospectors who were unscientific and their verdict has been that there was not a piece of granite in the country. Scientists who have investigated the geology a little have reported finding boulders of granite that were apparently carried and dropped in their places by the numerous glaciers of the glacial epoch. The finding of two immense granite beds in this county brings very prominently to light, the fact that it would be of vast benefit to this section of the country to have an extended geological survey made of it by the government. Iron and coal no doubt abound in this section as croppings of both are a common find. Oregon all round is a peculiar country and from the little writer has traveled we should judge that within its borders can be found the rock of all the important stages of the growth and development of this earth. It is said, you know, that there are living descendants of the Silurian age with us today.

The Sierra Nevada mountains were formed during a great post-Jurassic upheaval, while the Cascade mountains were formed at a more recent time. Scientists who have said anything have said that it is probable that the Coast mountains were elevated chiefly by a post-Miocene disturbance, but the finding of this granite makes it almost certain that portions of the mountains west of us were upheaved at an earlier period. The study of geology is like that of paleontology, very interesting and we see no reason why a society, having in view the investigation of these matters should not exist in this county. Probably no state in the union can excel Oregon in the number and amount of extinct animal species of interest to the paleontologist. It has been little looked over and there is yet a vast field for discoveries which will make the discoverer a national name. No better illustration of this can be found than in the history of the Oregon boy, Dr. J. L. Wortman, of the American museum of natural history of New York. The preserved remains of ancient animals attracted his attention when a youth, and today he is recognized by the scientists of Europe and America as being one of the foremost paleontologists of the age. Oregon presents the opportunity and there is no better place to commence than in Yamhill county. Along the banks of the Yamhill river can be found the remains of the mastodon and a little search no doubt would bring to light many interesting remains of other species that inhabited this earth—9,000 years ago.

If you want your prescriptions carefully and accurately compounded, go to Howorth & Co.

Remember that C. H. Cook carries a full line of graham in small sacks, corn meal and wheatlets, D. street.

The Secret of Fine Pastry.

Is wholly in using Dr. Price's Cream Baking Powder.

The only pure Cream Tarter Powder sold on the market. Other brands contain either ammonia, alum or some other adulterant. Ammonia or alum powders dry out, make the dough too porous, leaving a bitter taste, etc.

No agency has assisted so much toward perfection in cookery as Price's Cream Baking Powder. Its ingredients are simple and so blended as to exist in exact
