RIVERS IN THE PLANET MARS. ing Found on this Earth.

BUGGIES!

as if one saw the whole earth, with its ley poles, as a solid globe, floating overhead. One distinguishes clearly the dark blue seas and the brilliant, beaming, many-hued dry land—and on this the dry beds of a multitude of lakes, bays, gulfs, streams and canals, these latter either parallel to each other or crossing one another at right angles. As you continue to look you note the money it remains in the County.

As if one saw the whole earth, with its labor of the boat. Indeed, so far as my observation goes these fishermen's wives are the propelling, active, indoor the boat. Indeed, so far as my observation goes these fishermen's ments. To this, perhaps, more than to any decline of Erench courtesy, must be attributed the four extraordinary beattributed the four extraordinary each will which took place at Longchamp virile, while the men are phlegmatic and solve. At the tiller, in unfurling or reefing the sails, paying out or hauling in the nets, stowing away the fish, transferring them from their craft to the market bragozzo, in hauling the variations of color and of lights, and labor of the boat. Indeed, so far as my observation goes these fishermen's wives are the propelling, active, indoor the details of certain temperation and livelihood. Their movements are vigorous and even virile, while the men are phlegmatic and slow. At the tiller, in unfurling or reefing the sails, paying out or hauling in the nets, stowing away the fish, waiting, calmly, to give a taste of his steel to anybody else who might be inclined to try conclusions with him. His seconds, however, had by this time. this planet also the seasons follow each other in regular succession. The ice crust at the pole diminishes in summer and Westermann's Manot's - Hefte fealings that this affords demoustration not only that Mars is influenced by the suns rays precisely as we are, but also that the air and water are identical with ours. In fact the meteorology of Mars is now being reduced to a science, Judging the two planets by superficial characteristics, however, one must admit a condition implying a higher degree of development in Mars. The continents of the earth, seen from a distance, present a very torn appearance, and occupy scarced y a third of its surface, while Mars is girdled on both sides of the equator by one continuous maniland, intersected by a network of canals and rivers, the land occupying approximately three fourths of the whole area of the planet and the water only one fourth, as a consequence or which it may be that the atmosphere is clouded and vapor laden than ours. Peculiarly characteristic is the arrange ment in which the geological nature of Mars be and a fall affinished dog. I have offer the fall of the planet and the water only one fourth, as a consequence or which it may be that the atmosphere is clouded and vapor laden than ourse Peculiarly characteristic is the arrange ment in which the geological nature of Mars be and a fall affinished dog.
