VOL. V. NO. 29 ETHICS OF THE SINGLE TAX.

Based Upon the Rights of Every Man to the Earth's Surface.

"The single tax as advocated by Mr. Henry George and his followers is a proposition that the entire rent of land exclusive of return on capital invested in improvements, should be taken by taxation. Such a tax cannot be shifted by the landowner. The proposition is therefore practically a proposition to confiscate land values to the use of the state. If earried out, it would leave the landowner in the same position the stockholders in a corporation would be in if the government were to tax their stock to the full amount of their dividends. The single tax rests upon the equal right of every man to the earth's surface, derived from the natural rights to live, to have an equal opportunity, and to enjoy the fruits of one's own exertions. It is justified simply as the best or only available means of enforcing this right. Not being a believer in natural rights, I am not, perhaps, competent to say just what is meant by the "natural right to the fruits of one's exertions,' But I hardly think that a right simply to what he 'produces' can be the sense in which a man is held to have a right to the fruits of his exertions. It is not necessary that the man claiming in virtue of the right should have produced a thing or the value which he claims. The factory operative for instance does not produce his wages in any such sense. If the right is such as I suppose—a right to the reward one has worked for-it gives the The first owner cleared and redeemed of his recompense. He was the only man in the world who judged that recbought from him paid the price and lives in the backwoods, looking partly paid for it all; and it is as much the re-The Zulus are the finest race in Af- ward and fruit of their exertions as if rica, which is not very high praise to they had bought stocks or bonds or

What it ded him in the night time and killed does is to give the proceeds of the land many of his followers. Cetaweyo's not to each man equally, but to the people, the Usutus, formed an alliance community as a whole. But there are with the Boers and defeated Zibebu, no natural rights. Taking the test that Cetewayo died soon afterwards from what nature gives is the test of right, it is clear that the right to an equal share in the earth cannot exist: first, because second, because it is impossible for na. ture, or for man, with any power short

The justice or injustice of a single tax is a question that can only be decided results is a question with which I have The climate of St. Helena obliges not space to deal.
