"Durability is Better Than Show."

The wealth of the multi-millionaires is not equal to good health. Riches without health are a curse, and yet the rich, the middle classes and the poor alike have, in Hood's Sarsaparilla, a valuable assistant in getting and maintaining perfect health.

Hood's Sarsaparilla Never Disappoints

BITS FROM ABROAD.

The value of the fruit consumed in Great Britain every year is estimated at £10,000,000.

The queen of Italy, says a gossip, weighs 176 pounds; Queen Victoria, 171 pounds; the queen of Spain, 147 pounds, and the queen of Belgium, 143 pounds.

There is a quicksilver mine in Peru 170 fathoms in circumference and 480 religious worship is held.

It appears that they are to have a new form of field sport in England, as several gentlemen are busying themselves in the process of training manhunting bloodhounds. As the sport is followed on horseback it will probably be supplementary to-if not a substitute for-fox-hunting. It is not mentioned what is to be done with the man when he is run down. He can hardly be treated in the same way as the fox now is.

It is apparently almost as difficult for a tradesman to gain entrance to Marlborough house, the London residence of the prince of Wales, as it is to get within the lines of an armed camp. A narrow glass door in the right wing of the palace is reserved for such visitors, and only those having an appointment previously arranged for by the prince's valets are admitted, while several soldiers and minor officers of the law are close about to prevent the admittance of undesirable per-

A Misfit.

The young man who prefers to owe a tailor rather than to wear a suit which has been taken from the counters of a clothing store, says that he never cared for a counter fit anyway. -Boston Advertiser.

Derrick for Hay. This hay derrick for field stacking is reported by a correspondent of the National Stockman as having worked satisfactorily. The frame can be boltfeet deep. In this profound abyss are ed together if the maker wishes to take streets, squares, and a chapel where it down and put under shelter for use in after years or spiked together if he wishes to let it stand in the field. A pulley is used at each end of the long arm across the top. The pulleys can be best attached to the arm by clevises of suitable size. A third pulley is attached to one of the lower corners of the frame as most convenient when the derrick is in position for stacking. The base of the frame illustrated is 10 feet square, 10 feet high and 5 feet square at the top. Three sides are crossbraced. The fourth side is not, as it

FIELD HAY DERRICK.

makes it more convenient to take the pole down. The pole is 25 feet long. It should be 7 inches in diameter at base and 5 inches at top. Across the runners at center use a piece of timber 2 inches by 12 inches, 10 feet long, with 2-inch hole-or larger-in center for tenon, cut at end of pole to rest in, the shoulder around the tenon resting on the timber. The long arm is 15 feet long, and the correspondent thinks it should be two feet longer. Short end is 51/2 feet long, long end 111/2 feet.

About three feet from the base of the This is one inch iron about four feet long, fitting in an auger hole in the pole. This is used as a lever to turn the arm around over the stock when loaded. The high end of the long arm as shown in the illustration is about 28 feet from the ground. The frame must set close to the butt of stack or rick, the bulge of the stack coming out against the frame.

To Stop Growth of Horns. For stopping the growth of horns upon calves this mixture has been successfully used in experiments conducted by the United States Department of Agriculture Bureau of Animal Industry. Take fifty parts caustic soda, twenty-five parts of kerosene oil, and twenty-five parts of water. An emulsion is made of the oil and soda by heating and vigorously stirring, and this is then dissolved in water. The mixture should be placed in a bottle with a solid rubber cork. The calves should not be over three weeks old, from five to twenty days being the proper age. A horn will sometimes be killed that is even from four to six weeks old, but it can not be depended upon with certainty. In applying the solution the following directions should be observed: With a pair of scissors clip the hair around the embryo horn so as to expose a spot about the size of a nickel. While an assistant holds the calf securely drop two or three drops of the mixture on the horn, and with the ends of the rubber cork rub it thoroughly in over the bare spot. Apply the fluid first to one horn, then the other, until each has received three or four applications. The rubbing should be continued until the caustic has softened and removed the hair and surface skin around the horn. Care should be taken that the fluid does not spread over too large a surface or run down the side of the face.-The Jersey Hus-

Moisture and Strawberries. Although strawberry plants will not thrive where the soil is permanently wet, they do require abundant mois ture both during the growing and fruiting seasons. The non-observance of this requirement is the occasion of heavy losses. In the first place, the ground for strawberries is often left until planting time before plowing, and breaks up in clods, occasioning much labor in preparation with harrow and roller. Although it may be possible to put such a soil into fairly good condition for planting, the water which has been lost cannot be restored, and weeks

to keep the plants alive. It has been shown that more than 1,500 barrets of water per acre may escape from unplowed ground in one add one-quarter pound mustard, turn can't use it in politics to much advanweek in excess of the quality which over the pickles and seal.

may elapse before sufficient rain falls

will pass off from an equal area which has been plowed early and harrowed at frequent intervals. Moreover, the ground which has been plowed late will continue to dry out during the scacon at a rate in excess of the early plowed. This shows plainly that plowing and frequent harrowing are essential in order to retain soil molsture, even though planting may be delayed .- Ohio Agricultural Station.

Orchard Treatment. Good drainage, natural or artificial, is essential to success. Trees are im-

patient of wet feet. Good tiliage increases the available food supply of the soil and also con-

serves its moisture. Tillage should be begun just as soon as the ground is dry enough in the spring, and should be repeated as often as once in ten days throughout the growing season, which extends from spring until July or August.

Only cultivated crops should be allowed in orchards early in the season. Grain and hay should never be grown. Even hoed or cultivated crops may rob the trees of moisture and fertility

if they are allowed to stand above the tree roots. Watch a sod orchard. It will begin

to fail before you know it. Probably nine-tenths of the apple orchards are in sod, and many of them are meadows. Of course, they are

The remedy for these apple failures is to cut down many of the orchards. For the remainder, the treatment is cultivation, fertilization, spraying-the trinity of orthodox apple growing.

Potash is the chief fertilizer to be applied to fruit trees, particularly after

they come into bearing. Potash may be had in wood ashes and muriate of potash. It is most commonly used in the latter form. An annual aplication of potash should be made upon bearing orchards, 500 pounds to the acre.

Phosphoric acid is the second important fertilizer to be applied artificially to orchards. Of the plain superphosphates from 300 to 500 pounds may be applied to the acre.

Nitrogen can be obtained cheapest by means of thorough tillage (to promote nitrification) and nitrogenous

green manures. Barn manures are generally more economically used when applied to farm crops than when applied to orchards; yet they can be used with good results, particularly when rejuvenating the old orchards.

Cultivation may be stopped late in the season, and a crop can then be sown upon the land. This crop may serve as a cover or protection to the soil, and as a green manure.-Prof. Bailey, Cornell University.

The Farmer Poy's Advantage, A sturdy American of the self-made stock is Tilly Haynes, known the country over. He said in Atlanta the other day, of the degeneracy of the Boston youth of Yankee stock: "Just look at that sign on Washington street. The first name is the patronym of a Massachusetts family which has been promihas taken into partnership. When he fore she was parted from her husband, dies the German's name will have first place. Our young men have begun to port, she followed Capt. Buchan withyoung German and the young Irishman can lift up the barrel and carry it off-later they carry off the business,

There is a point here for youth in both city and country. The world wants workers-young men who mean business, who are reliable and who will develop capacity with experience. The surroundings that bring out this spirit of industry, that develop ability. The older we grow and the more we see of life the more do we realize that the country-bred man has a tremendous advantage in the battle of life. The boy is indeed fortunate who is a farmer's son.-Orange Judd Farmer.

Way to "Cool" Sitting Hens. If rightly handled, the hen may be induced in a few days to go to scratching and give up all idea of sitting. without being cruel to her, either. Get a grocery box, or something similar. and convert it into the affair shown in cut. It has no botom, but one end has a sloping top to throw off rain, and also protect the hen from the sun. The

Hunt for Dewey Relies.

The house in Montpelier, Vt., which Dr. Julius Dewey occupied and in which all of his children were born was originally small, but was several times added to. Within the last two or three years, wishing to replace this modest structure with a handsomer, more modern edifice, Edward Dewey, the second son, sold the dwelling and barn (retaining the grounds) for \$150. Three days afterward the buildings were resold for \$400, the last purchaser, who paid the cost of removal, placing them on a lot on State street. Since the battle of Manila this house, as the birthplace and early home of its hero, has been an object of interest latter, indeed, have threatened to carry it away piecemeal, a souvenir fiend in one instance wrenching off a silverplated faucet and leaving the water running in the bathroom with the pressure of the full system of 158 pounds. -Boston Transcript.
