

you want them to stop growing and be-

gin to fatten. This extra feed not only

elps the growth of the pigs, but makes

ow the slop to get sour or even stale,

and feed no more than they will eat up

to it. Even though there is room

enough at her trough for them to eat

at, it is better that they have a separ-

ate trough. It should be low enough

so that they can easily reach the food,

and there should be a platform of two

or three planks for them to stand on.

Clean the trough each time before put-

When a stranger begins to milk a

cow it usually results in some decrease

of milk production, though he may be

a good milker. The better the cow the

more likely she is to be of a nervous

temperament, and the more she is apt

to be affected by a change in handling.

milking or surroundings. If the new

milker lacks experience it usually re-

sults in a permanent shrinkage of the

milk yield and early drying off of the

cow. But it is necessary that the boys

should learn to milk if they are to re-

main on the farm, and therefore they

should be set to learn upon such cows

as will naturally dry off soon. Do not

give them helfers with their first calf,

as the heifer should be kept in milk as

giving them dull hoes and scythes or

other tools to work with, that no man would consider fit to use for a day's work. It is calculated to disgust them

with the business, and drive them to seek other occupations as soon as they are at liberty to leave home. When it is

not practicable to give them such a

cow, allow them to partly milk her, and then let some experienced milker

finish the job, who will be sure to ob-

Preserving Wagon Wheels. Farm, Field and Fireside tells of a

method of preventing wagon wheels

from shrinking in dry weather, which

a North Carolina man says avoids the

necessity of having tires reset, and in

this way soon saves itself in blacksmith

The trough, shown in the illustration,

is made of sheet iron. In it he puts a

supply of pine tar, which is heated

bills besides preserving the wagon.

much better for the sow. Never al-

More Room in the "fie Up." The "tie ups" in old-fashioned barns are almost always too short in depth to give proper chance for cleanliness or for comfort in caring for the cows. Figure 1 shows a cross section of the

old-fashioned tie up. There is a narrow walk in the rear, always slippery and dirty from the absence of a gutter for the manure. Figure 2 shows a change of plan that is easily accomplished. The cattle are moved ahead so that the tying post comes at the edge of the feed floor and the platform is raised, giving a chance for a manure gutter behind the platform and for a raised walk that is always dry and clean. The cribs occupy space in the

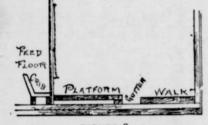

FIGURE 2.

feed floor, but are made so they can be removed in having time, if desired, so that the hay teams can be driven into the feed flood. The plans speak for themselves, and show an easy way to improve the conditions in many old barns.

fetting Out . trawberries. By many October is regarded as the best month to set out strawberries, over a fire to a boiling heat. The wheel especially in the middle and southern is then jacked up, the trough placed portions of the cotton belt. It is a under it and the wheel lowered so that hardy plant and will make considerable the tar will cover the felloes. The wheel growth between this and Christmas. is then slowly turned in the tar, which Select plants from this year's runners: fills every nick and crevice in the wood never set out an old plant; an old plant and between the wood and tire, thus is easily recognized by having more making it impervious to moisture or or less dark roots, while those of young ants are yellow. The land should have been thoroughly prepared and highly manured, with well rotted cow manure or with ground bone and kainit. or with ashes in place of kainit if ashes can be had. Lay off drills 3 feet apart and set plants 15 to 18 inches apart in drills. Trim off most of the leaves and shorten the roots some, if very long. Puddle roots in mixture of clay and water; spread out in furrow. cover with a little dirt and press firmly on them, then fill furrows so that crowns of plants will be a level with general surface or a shade below it; never set so deep that the crown or bud shall be covered with dirt .- Southern Cultivator.

In the Horseless Future.

Worms

CASCARETS are a sure cure for tape worms and those other pests of worms that make the lives of children and their mothers miserable. Any variety of parasites that live in the human stomach or bowels, and feed on the substance which should properly nourish the body, are dislodged by Cascarets Candy Cathartic, and expelled. One or two tablets usually drive them out, and persistent use is sure to do away with the unwelcome intruders. Many children and older people suffer from worms without knowing it, and get thin and weak, although their appetite is good. The best way to find out is to take Cascarets. Never accept a substitute!

Farm Notes.

One of the best modes of destroying Canada thistles is to pour a gill of sulblood from the wild blue teal. They phuric acid in the crown of each plant. are very hardy, can stand any climate | The acid destroys the plant clear down and produce eggs on almost nothing. to the roots, and there are but few They equal at least, if not surpass the plants that will survive the treatment. famed prolific Indian Runners as The cost is little, but in using the acid layers. This is the case with us any- one must be careful. It should be apway. Their young are hardy from the plied from a bottle or some other vessel

If the strawberry bed has been overrun by grass and weeds the best thing to do is to burn the bed over late in the fall, and next spring the strawberry plants will get a good start. The weeds and grass will render any strawberry bed useless and unprofitable if something is not done to give the strawberry plants an opportunity to get ahead in the spring. Mulching will also be serviceable on the bed.

Those who are giving small patches of celery their attention will find soapsuds excellent. The prize winner at one of the leading State fairs, whose celery was far superior to all others, and who was successful in winning every year, for a long time kept his methods secret, but for a consideration he made known that in addition to the use of manure fertilizers, etc., as usually practiced, he applied the soapsuds to the celery on wash days. The same treatment is also excellent for asparagus.
