# KENTUCKY ONLY DOUBTFUL

## McKinley's Plurality in Ore- gence, of the navy department, disgon Gaining Daily.

ROGERS ELECTED BY 1,300

Malheur, Once Conceded to the Democrats, Is Very Likely to Be Republican-Frink Defeated.

Portland, Nov. 9 .- Only one doubtful state remains-Kentucky. The Democrats claim the state for Bryan by 7,800; the Republicans also claim the state, but give no figures. It will require the official count to determine the result.

McKinley carried Nebraska by at least 2,000. The legislature is in doubt, and will not be determined until the official count of Douglas county is in. The Republicans are figuring on a safe majority on joint ballot.

Other states are practically as first reported. The electoral vote follows: 1900. 1896. nickel has long been known to give

ment.

McKinley	 292

In Washington.

10.-The Seattle, Wash., Nov. majority for President McKinley in the state of Washington will be between 11,000 and 12,000, and John R. Rogers, Democrat, for governor, will have something like 1,300 over Frink, his Republican opponent. The average majority of the two Repblican candidates for congress, Jones and Cushman, will be 9,000 or more, and the legislature will be heavily Republican. All the state Republican ticket, except Frink, is elected by large pluralities. All these things were made clear by yesterday's returns. Every county in Western Washington has been heard from and the only two counties in Eastern Washington about which there is any uncertainty are Chelan and Okanogan. With these, scattering returns show that the only question is to the size of the Democratic pluralities. Later returns are more likely to increase than decrease Rogers' plurality.

McKinley has carried 26 counties and Bryan 10; Frink 18 counties and Rogers 17, with one (Mason) a tie.

#### Is Still Piling Up.

Portland, Or., Nov. 10 .- McKinley's its manufacture, the following data from 28,500, a loss of 16 per cent since height of basement is nine feet and purality in Oregon is still piling up. concerning recent firing trials are given 1896 and a Bryan gain of 21 per cent. there are plenty of windows for light Owing to an error in a former footing, under the name of the country owning his lead this morning is made to ap- the vessels, rather than that. of the pear 500 less than yesterday, whereas kind of armor or maker. often so ridiculously small that dairying does not pay. The remedy often is for more farmers to encourage the erection of creameries. In parts of the West and East where creamerics have been established farmers get more recontented, than in dairying regions where the milk is all shipped to cities.

The cost of making a pound of butter has been steadily decreased by means of the improved creamery, and it is possible for creameries to make and sell butter at a profit when farmers cannot. Country butter does not seil well in the large markets. Creamery seems to have a charmed name for consumers, and they demand this every time. Country butter to-day is a drug in many markets-as low as 8 and 10 cents per pound. The farmer making his butter cannot make a living at any such prices. The day of the country butter has gone, and the farmers of any dairying region should recognize this and not waste their time in making it. The milk should either be raised for a creamery, or the farmers should join together and run their own creamery. As a rule, the man who will put up the creamery and run it himself will do better than an association of farmers where too many heads are apt to cause disputes and bickerings. Milk sent to the creamery pays all the way from 12 to 22 cents a pound, and at this price the farmer is making far more than by making his own butter. This comparatively high price is made possible because of the better prices received for creamery, and for the low cost of manufacturing it. This latter varies because the size of the creameries vary. The larger the creamery the cheaper the butter can be made, and this varies all the way from 1 cent a pound to 7 cents. The two extremes, however, are exceptions, and somewhere between them the actual cost could be placed, say from 3 to 5 cents.-S. W. Chambers, in American Cultivator.

#### Profit from Cows.

It is estimated that the cost of a cow for one year for food alone is about \$25, says the Farmers' Journal. This amount she must return to her owner before she can make any profit, and yet there will remain the cost of the labor and shelter, for which she will pay with the manure, as it possesses value, as well as the milk. If the farmer cannot get enough from the cow to pay for the food she eats he will keep her at a loss. At \$25 per year the cost is about 7 cents per day. The price of the milk in market will determine the value of the cow. If she produces 2,500 quarts of milk in a year,

the cost of each quart will be reduced. All cows cannot be kept for one year at so low a cost, but as there must be an expense for the cow whether she proves valuable or not, the dairyman should seek the best, in order to reduce the cost.

#### Fodder Shock Finder.

An Ohio Farmer reader sends the accompanying description of an appliance that he uses to the corn fodder in the shock: A is a piece of hard wood three feet long, round and tapered to a point. A crossbar is solidly fastened upon the desired a hospital pen, or two, may be large end, and to one side of the middle of this crossbar is stapled a half inch

## STRONG TONE IN TRADE.

Cotton, Wool and Iron Are All Doing Better.

Bradstreet says: There is a stronger tone in cotton and wool, the former turns from their farms, and are better largely because of reports, or fears, of crop damage, while the latter is firm at former quotations on a volume of business equal to lately enlarged totals. Cereals are, as a whole, dull and lack speculative interest. Wheat is practically unchanged, early reports of Argentine crop damage failing to bring out much buying, and the latter in turn inducing realizing. Corn is only fractionally higher, while hog products are rather slow and weak. It is from that long-time barometer of trade, the iron trade, that relatively the best reports as to the demand and the prices come. While a considerable volume of business was displayed just previous to election, the quantity of sales reported since has been very satisfactory.

Hopefulness as to improvement in fall demand, now that the election is over and cold weather has arrived, is reported in all sections, but nowhere is the feeling of confidence so marked as in the South. Despite the recent decline in cotton, the feeling in that section is notably cheerful.

In the West, dry goods, clothing, shoes and hardware are moving better. In the East, leather, shoes, wool, tobacco, and coal are firm and outlook for business is regarded as favorable. On the Pacific coast, export trade with our new possessions and with Asia has been good. California reports the large area planted in grain helped by recent rains.

Wheat (including flour) shipments for the week aggregate 3,555,507 bushels against 3,612,421 bushels last week. Failures for the week in the United States number 161 against 165 last week. Canadian failures for the week number 17, against 16 last week.

#### The Cost of Making Butter.

The creamery conducted on the right principles is one of the best friends of the farmer, and if it can be started it should receive the intelligent support of those who raise the milk and cream for it. Too often there is an antagonism between the creamery owners and the farmers, and the latter, to show that they have the power to close the creamery, may very easily destroy a profitable industry in the vicinity. It certainly pays farmers better to raise their milk and cream for the creamery these latter places the price for milk is Sheep Breeder.

rope, with a ring in the free end. Opposite the staple is a strong iron hook. To bind, insert sharp end into shock, put rope around shock and fasten ring in hook. Tighten by turning as you would an auger and bind with cornstalks or twine.

#### Spraying Fruit Trees.

A correspondent of the Prairie Farmer says he has been spraving fruit trees with more or less success for eleven years, but only for the last four years has he obtained results entirely satisfactory. He now slakes lime in the ordinary manner and strains it. Then for apple and plum trees he adds to a gallon of this two gallons of water and two teaspoonfuls of London purple, and sprays the trees before the bloom comes out, and again after the bloom is gone. Gives a third and fourth application if necessary, which is not often the case. Never spray while the bloom is on, as it drowns, polsons or kills the pollen. Uses the same on currants and gooseberries before they bloom and after the fruit has started. For peaches and pears he weakens it, using one-half gallon of lime water and one teaspoonful of London purple in two gallons of

don purple to spray trees after fruit is fair size, to prevent fruit rotting on the pound. trees, and has succeeded in saving it by ed to a pole, right on the ripening fruit. per pound.
