Bishop & Kay's prizes were awarded to N. K. Harbaugh, A. C. Davis, W. C. Hembree, and Mrs. J. S. Hibbs in the order here enumerated. We disagree with the committee in the award of the first three prizes. In our opinion Mr. Hembree was entitled to first prize, Mr. Davis second, and Mr. Harbaugh third. It was left wholly to the committee. Bishop & Kay had nothing to say in the matter.

We can return the compliment of our cotemporary the Vidette, for his pretty notice of the Daily Reporter in no better way than by saying that from his position as a mounted sentinel of this lovely valley he has fine opportunity for judging upon which side the jewels are.

The plan of giving the Indians land in severalty instead of to the tribes in reservation, thus creating an independent nation to be protected and guarded against in every reservation, is working well, as the Indian asks for a paper title to his land, and with that in his possession he has some guarantee that the land he improves will not be taken from him.

"Say, Matilda, have you tasted the new tea that A. J. Apperson has just got into his store?" "No. Is it good?" "Good! Well, I should just say so. I shall never buy anything else, and I only wonder I did not know it before. Why, its flavor is delicious, and a cup of it does me more good when I am tired out than any tea I ever tasted." "I must get some of it." "Do, and mind you can only get it at Apperson's, it was imported direct to this town by himself."

Six years ago, says a New York Sun dispatch of the 8th, Rev. W. H. Harrison predicted that the south Atlantic coast would be visited by severe earthquakes in August, 1886. He further predicted that at no distant date after the shocks on the Atlantic coast the city of San Francisco would be totally destroyed. He alleged his predictions were made on scientific calculations. And now the people of San Francisco are anxious, as they have suffered what is locally called "earthquake weather" for the past two days. On Tuesday the thermometer registered only one degree short of the hottest weather ever known. Former hot spells have been followed by earthquakes, so there seems rational cause for uneasiness.
