**Cow Population Of Marion County Highest in State**

Marion County has more dairy cows than any other Oregon county according to figures released last week by Roger W. Morse, O. S. C. extension dairy specialist.

After dropping from a high of 290,000 in 1943 to a low of 238,000 last year, the state's cow population is climbing again, Morse added.

On January 1 this year the state had 240,000 cows with 18,000 in Marion county.

Last year the sale of dairy products brought Oregon dairymen \$55,357,900, or about 15 percent of the state's total farm income. The figure does not include value of farm animals sold for slaughter.

One or more cows is being milked on approximately 48,000 of the state's total of 63,000 farms. The largest number of cows, about 70,000, are in herds ranging in size from three to nine animals, indicating dairying is still a family-sized farm operation. With an estimated 100,000 animals, Jerseys are the most popular Oregon breed. Guernseys with more than 75,000 are giving them a close race.

Oregon's "average" dairy cow last year produced 263 pounds of butterfat in 5,850 pounds of milk, and in comparison with the national average, stands in an enviable position. The nation's "average" cow produced only 5,229 pounds of milk.

For the 29,000 Oregon dairy animals on dairy herd improvement testing last year, the averages show 357 pounds of butterfat in 7,643 pounds of milk.

**LITTLE ILLS MAKE BIG BILLS!**

True, that "little illness" you've been mentioning in an offhand way, may not seem to amount to much—just a few faint symptoms. But, neglected, these "little ills" can lead to big bills for doctors, medicines, etc; not to mention needless suffering and loss of precious time. Consult a Doctor now—you'll save by it in the end. And, of course, we hope you'll bring his prescription to us for careful compounding.
