### HAVE A BETTER KITCHEN

Home builders who are building houses for sale and profit are quick to sense the advantages of modern kitchen equipment as a powerful selling point. Even in the so-called "economy" homes, the builder is supplying such items as modern steel cabinet sinks and storage cabinets, ranges and refrigerators.

Now they are carrying the idea one step further. Many builders are including an automatic dishwasher in their kitchens—even in homes selling in the \$12,000 to \$14,000 bracket. This significant development emphasizes once again the increasing popularity of the home appliance which saves so much time and work for the homemaker.

Meanwhile, the manufacturers of automatic home dishwashing machines are sprucing up their products and more makers are bringing machines into the field, and all are putting on promotional campaigns. The inevitable winner in this process is the homemaker who is able to buy a dishwasher that does an excellent job and gives long, trouble-free service.

One of the newest machines on the market uses an interesting new principle of automatic dishwashing. It consists of pumping water, superheated in a booster tank, through small holes in a square tube which extends up through the center of the tub. The pressure causes the tube to spin and the jets of water strike the dishes racked in surrounding baskets. This method is said to assure complete washing action in all parts of the tub. The cycle of one wash and two rinses takes less than 10 minutes.

## "SMALL BUSINESS"

By C. WILSON HARDER

Despite reports circulated by hopeful bureaucrats, the nation's small independent businessmen are almost equally divided on government control of prices and wages, rationing.

A nationwide poll just completed by the National Federation of Independent Business on this issue, and others, reveals 44% for; 50% against; 6% undecided.

These thousands and thousands of ballots, sent as usual directly to Congressmen, are causing many a solon who voted these powers to the President embarrassment.

The rapid, severe price jumps have hurt small businessmen even more than consumers.

But apparently there is a reluctance to jump from the frying pan into the fire.

It is felt if government had shown competence in dealing with defense, taxation, other grave matters, there would be more confidence in government intervention in the domestic economy.

Now, there seems to be one big question.

"What has the greater destructive power—the present inflationary trend which may be stopped by American common sense—or bureaucratic meddling which once started may never make sense, or never be stopped?" This attitude of small businessmen might be the most significant vote of no confidence yet registered.

On the same ballot independent businessmen voted almost unanimously for a law that will require co-operatives to pay a fair share of taxes.

©National Federation of Independent Business

The vote was 98% for; 1% against; 1% undecided. Businessmen have the support of the Treasury Department, anxious to plug loopholes which have been permitting a billion dollars of tax income to escape yearly.

This issue will take the spotlight in Congress soon. And as usual, the lobbyists opposing any action will shed copious tears over the "unwarranted attack on the farmer."

Actually, bona-fide farm co-operatives would be affected but little. Farmers themselves will be shocked at the coming disclosures which will show that abuse of the present regulations has been the highroad by which many big companies have escaped taxes.

Congressman Huber of Ohio created some discomfort the other day for Stuart Symington, chairman of the National Security Resources Board. Symington has just appointed a 12 member mobilization committee that will function when, and if, price controls, rationing is started.

The Congressman pointed out that labor, agriculture, industry and the public are represented on the board. But the distributive industry, employing 12.5 million, second only to manufacturing, is not represented. And the distributive industry will have to post prices, collect ration coupons, do most of the work.

But this obvious deficiency was apparently ignored.

As one newspaperman remarked, "The trouble with Congressman Huber's comment is that it makes common sense, and in Washington, the keynote is 'billions for theories, but not one cent for practical experience'."
